Features and Functions of user web portal V3.1.0

Features and Functions of User Web Portal

Login

To login to the user web portal, do one of the following based on device's cloud connection status.

- When not connected with the cloud
- 1. Make sure your computer and the devices are on the same local network.
- 2. Type in the home center device's IP address into the browser.

http://192.168.2.38/loginView

3.Enter the username and the password which are both Admin888.

- When connected to the cloud
- 1. Make sure your computer and the devices are on the same local network.
- 2. Enter enter the home center device's IP address in the browser, or go to https://my.akubela.com.
- 3. Log in with the family's administrator account.

How to get the family administrator account?

Option 1: Contact your service provider, and provide them with a valid email address and other required information. The administrator will receive a welcome email with login credentials. Option 2: After the devices are all connected to the cloud, you can self-register an administrator account by tapping the **Account Registration** button on the panels.

Option 3: Open the BelaHome app and tap **Sign Up** at the bottom left to create an account. Once registered, log in and scan the family QR code to become the administrator.

Add devices

Add ZigBee Devices

ZigBee devices, such as sensors, emergency button, and more, can be added via the user web portal.

1. Click 🖪 in the upper right corner.

	akubela	All Devices 5	5/35		
~			2/2	Public Area	
Û	Home			E12	E12W-240205

2. On the pop-up window, select Add device > Gateway Scan to add.

< Add Device	\times
Gateway Scan to add	×
Select device type to add	•

3. Select the desired panel to add the device to.

< Add Device	×
HyPanel	•
HyPanel Lite2	•

4. Put the ZigBee device into pairing mode.

TIP:

Here are examples of how to put devices into pairing mode. For more devices, see the guide Put ZigBee Devices into Paring Mode, or refer to their manuals.

ZigBee device	How to put it to the pairing mode	
Smart Emergency Button	Insert a pin into the reset hole at its back cover for 5 - 10s until the green light flashes quickly.	
Smart Flood Sensor	Press and hold the reset button on the front for 5 - 10s until the green light flashes quickly.	Press the reset button for 5s then release.
Smart Temperature and Humidity sensor	Press and hold the reset button on the side for 5 - 10s until the signal icon flashes quickly.	Press the button for 5s.
Smart Motion Sensor	 Rotate the battery cover anticlockwise to open. Press and hold the reset button for at least 5s until the green light flashes quickly. 	Press the reset button
Smart Gas Sensor	Press and hold the reset button on the front for at least 5s until the green light flashes quickly.	Connect power supply. Press the reset button for 5s then release.

Smart Smoke Sensor	Press and hold the reset button on the front for at least 5s until the green light flashes quickly.	Press the reset button for 5s then release.
Smart CO Sensor	 Power on the sensor, and wait for its indicator light to change from yellow to green. Press and hold the button on the front for at least 5s until the green light flashes quickly. 	Long press the button for 5 seconds and release.
IR Controller	 Connect the controller to the power. Press and hold the side button until the green light flashes slowly and a beep sound is heard. 	LED indicator Networking button

- 5. Place the ZigBee device to close to the gateway.
- 6. Wait for the device to be discovered. Select it and go to the next step.

Add Device

Connect your device to the local wifi network

To pair with the Kasa Smart device, do as the following:

1. Follow the device instructions to add it to the Kasa Smart app.

2. Ensure that the network used during the device setup is on the same local area network (LAN) as the panel.

Next

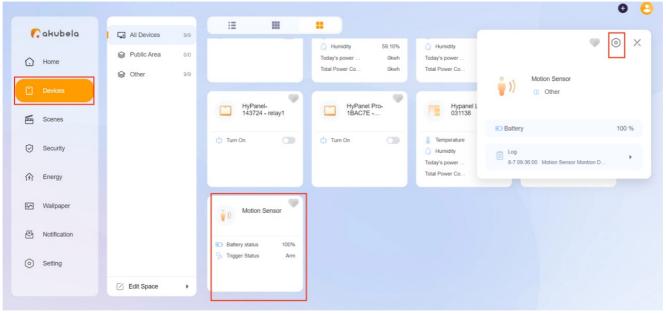

Х

Manage devices

Remove added devices

To remove an added device, do the following:

- 1. Click Devices tab on the left screen.
- 2. Select the desired device. A menu appears on the right.
- 3. Click of at the upper right to go the device's setting page.

4. Select Delete and then Confirm.

Create and manage automation scenes

You can create your own automation scenes to automate your home devices to do what you want, when you need. Existing scenes can also be edited or deleted.

Scene types

According to the conditions you select, there are 3 different types of scenes:

- Auto scene Scene that is set to be activated based on a schedule or an event.
- If the scene icon is orange , it means as long as the preset conditions are met, the task will be triggered.
- If the icon is white , it means the task will not be triggered automatically. You can tap it to allow it to auto-run.

NOTE:

This type of scenes are not displayed on HyPanel devices.

- Manual scene
- : A scene that is set to be activated based on a tap or click on the

scene image.

• Auto and manual scene

: C A scene that is based on a

schedule, an event, and a tap or click. When any of the conditions are met, the scene will be activated.

Create a scene

A scene consists of condition(s) and task(s). The preset tasks or actions could be triggered when the conditions are met. For example, you can create a scene that turns off lights when you leave. To create a scene, click in the upper right corner, and select Add scene. The scene creating

screen opens.

Akuvox

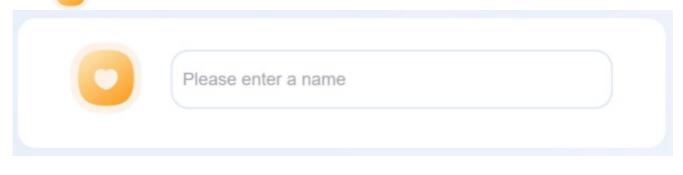

(akubela	Scenes

Name your scene

Click

Giving your scene a unique name helps you easily distinguish between similar scene cards, so does add an image. The image is displayed along with the scene name on the Scenes screen.

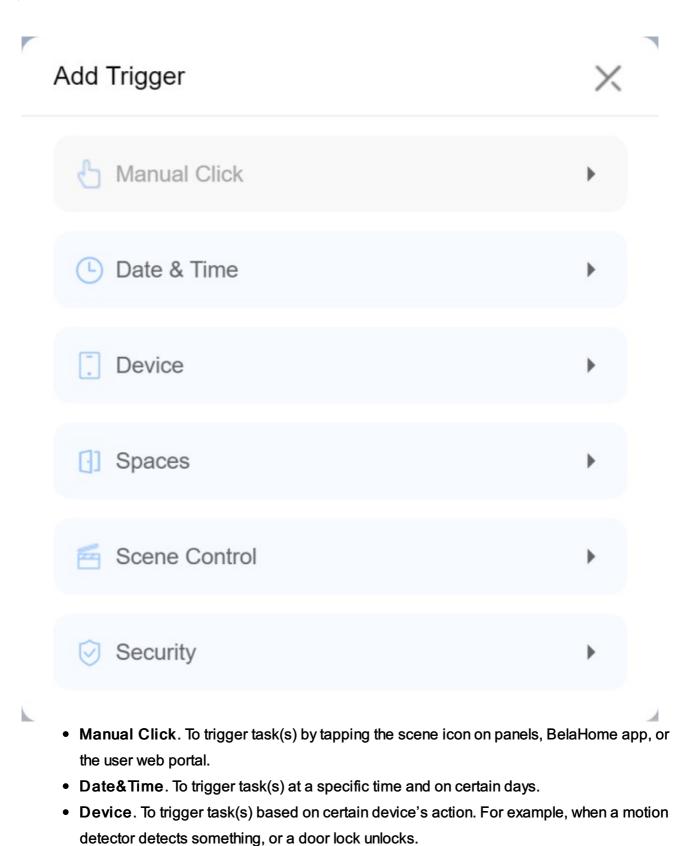

to select an icon from the default photos. Then type in the scene name.

Select trigger conditions

Conditions are different events that can trigger tasks, including the time of a day, your devices' actions, the security mode changes, and more. If you set multiple trigger conditions, the scene can be triggered when any of them is met.

When *		
C	Manual Click When scene card is tapped	1
	trigger	
Click 🕂 in	the When filed, from the pop-up list select one or more of the following:	

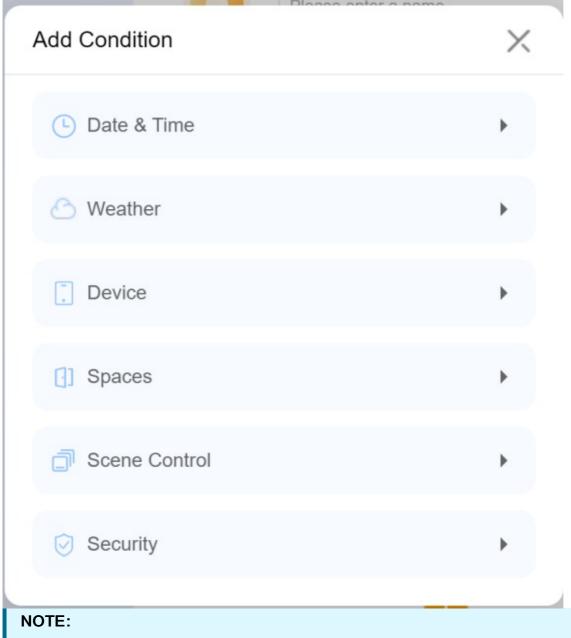

- **Space**. To trigger task(s) based on a specific condition or action performed by all devices of the same type within a designated space.
- Scene. To trigger task(s) when a scene's auto-run feature is enabled or disabled, or when the scene runs.
- Security. To trigger task(s) when the system is armed or disarmed in a certain security mode or an alert is activated.

Set preconditions

This step is optional.

To add preconditions, in the And filed, click _____. The options are slightly different from the trigger

conditions, such as the additional weather condition, the exclusion of manual click, and so on.

If you add conditions in both When and And fields, the scene will be activated when:

a)Preconditions in And field were already met; and

b)Any of the trigger condition in When field are satisfied.

For example, when your system is armed in the away mode, and if the smoke sensor detects leakage, the preset tasks will be activated. Please refer to the image for the configuration.

When *		
	Device When Other room Smoke Sensor-000001 smoke detected trigger	Ū
	+ trigger	
And		
0	Security If Away mode is in arming mode	1
	+ Condition	

Select tasks

The task is the action(s) to perform when preset conditions are met.

Add Task	×
Device	Þ
[] Spaces	۲
💮 Send Message	Þ
Send Notification	×
🌜 Call Someone	×
Scene Control	×
Security	×
Send HTTP Command	×
🕒 Delay	Þ
Ring Notification	Þ
🕅 DND	•

Click tin the Then filed, and select one or more of the tasks. In addition to those options the

same as the conditions, you will find the following new choices:

- Send Message. Send a message to designated smart panels and family members.
- Send Notification. Send a notification to panels and family members.
- Call Someone. Call any family member(s) or panels.
- Scenes Control. To trigger, enable, or disable other scenes.
- Security. Enable the system to be armed or disarmed in a specific security mode.
- Send HTTP Command. Send a HTTP command to certain devices.
- Delay. Make the system to wait for a period of time before performing the task.
- **Ring Notification**. Send a notification to the designated devices or family members when some rings the door.
- DND. Turn on or off the DND function.

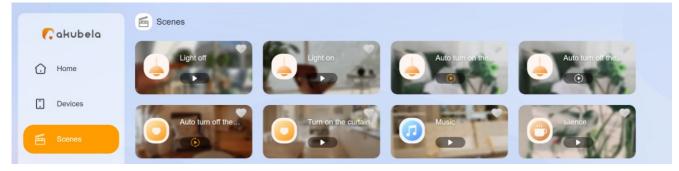

Once you're finished, click Save at the bottom of the screen.

The newly-created scenes(except the scenes without a manual condition) will display on all panels within your family and BelaHome's Scenes screen.

To customize the scenes that displayed on each panel, see Personalize on-screen contents.

Edit a scene

To modify the name, image, conditions, or tasks, go to **Scenes**, and click on the desired scene to enter the editing page.

Delete a scene

If you wan to remove a scene, go to **Scenes**, click on the desired scene to enter the editing page, and click **Delete** at the bottom right.

- In Task field, do any of the following:
- Toggle the Alarm Siren on or off.
- Send Notifications to all panels and family members.

- Send HTTP command to perform specific actions.
- Trigger Relay. Select the relay(s) to be triggered when an alarm occurs.
- Make SOS Call. Choose the preset SOS members to be called when an alarm occurs.
 To add the SOS numbers, see here.
- Defence Delay. To configure a arming delay when you change the security mode to another.
- Set the Alarm Delay to let the alarm sound after a specific time period.

Create a new security mode

You are able to create your own security mode.

- 1. Click **(Add security**).
- 2. On the creating mode screen, complete the following settings:
- Name the mode.
- In Any Devices Active field, click _____ to select one or more devices to start a task

when any of them is triggered or any of them detects something.

• In **Task** field, select one or more tasks to be triggered. The options are the same as those in configuring default security mode.

3. When you're finished, click Save.

The newly-created modes will be displayed on all the panels' and BelaHome's Security screen.

Family accounts management

In Akubela, there are various account types with different permissions.

The following are the three default types of accounts and their associated permissions:

- Administrator. One and only. Having permissions to log in to the Home Center web interface, access all available features and functions, manage family data, and manage family member accounts.
- Management role. Having permissions to access all available features and functions, and to manage general user accounts.
- General user. Only having permission to access features and functions, such as devices and scenes control, but cannot add them or modify their settings.

Administrator account

Only the family administrator can manage member accounts, including updating information, changing permissions, transferring the administrator role, and more.

Change administrator account settings

1.	Click 😑	in the upper right corner, and select My A	ccount.
Fan	nily Accour	nt	×
My A	Account		×
Fam	ily Name		TEST
Fam	ily Address	Canada New Brunswick Campbell	ton
Fam	ily Devices		5
Fam	ily Members	8	•

Sign out

- 2. Do any of the following:
- Modify your name.
- Add or change your region and phone number.
- Change your login password (Not available when the family is running without the cloud connection).
- Unbind your account with the family, and give up all family-associated permissions (Not available when the family is running without the cloud connection).
- Delete your account (Not available when the family is running without the cloud connection).

NOTE:

After you delete your account, you will not be able to sign in to BelaHome, and will lose all associated permissions. Before proceeding, you have to transfer the administrator rights to another family member.

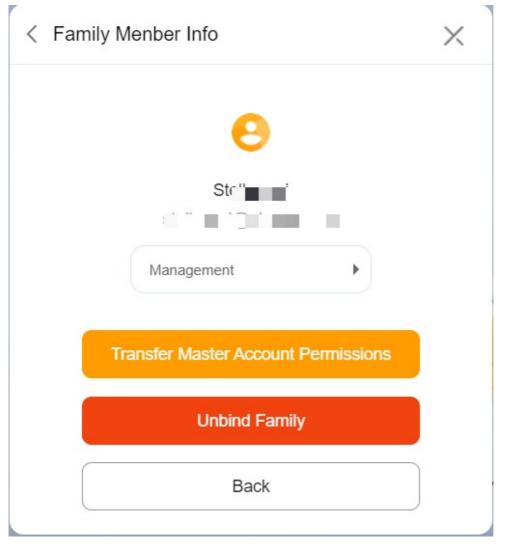

Transfer administrator role

The administrator role is able to be transferred to another family member only when the family is running with the cloud connection.

To transfer the administrator role to another member, click

> Family Members, and select

the member you want it to be the administrator. Click **Transfer Master Account Permissions** and follow onscreen instructions.

Manage family member accounts

Administrator account is able to create and manage management and general user accounts.

See family member info

in the upper right corner, and select Family Members. All the member accounts are

listed here.

Click

Add family members
