IT88 INDOOR MONITOR

Admin Guide

Thank you for choosing the Akuvox IT88 series indoor monitor. This manual is intended for the administrators who need to properly configure the indoor monitor. This manual applies to the 88.30.12.404 version, and it provides all the configurations for the functions and features of the IT88 series indoor monitor. Please visit the Akuvox forum or consult technical support for any new information or the latest firmware.

Product Overview

IT88 series is an Android SIP-based indoor monitor with a smooth touch-screen. It can be connected to the Akuvox door phone for audio/video communication, unlocking, and monitoring. Residents can communicate with visitors via audio/video calls, and it supports unlocking the door remotely. It is more convenient and safer for residents to check the visitor's identity through its video preview function. IT88 series are often applied to scenarios such as villas, apartments, and buildings.

Model Differences

Model	IT88S	IT88A
OS	Android 9.0	Android 9.0
Color	Black	Black
Display	10-inch IPS LCD	10-inch IPS LCD
Resolution	1280 x 800	1280 x 800
MIC	Single microphone, -58dB	Single microphone, -58dB
Speaker	Dual speakers, 4Ω / 3W	Dual speakers, 4Ω / 3W
Wi-Fi	NA	IEEE 802.11 b/g/n
Bluetooth	NA	BLE 4.1
Ethernet	1xRJ45, 10/100Mbps adaptive	1xRJ45, 10/100Mbps adaptive
Power Supply	12VDC/1A or IEEE 802.3af PoE	12VDC/1A or IEEE 802.3af PoE
Alarm Input	8 x Alarm Inputs	8 x Alarm Inputs
Door Bell Input	1 x Bell In	1 x Bell In
Relay Output	2 x Relay Out(NO/COM/NC)	2 x Relay Out(NO/COM/NC)

Introduction to Configuration Menu

- **Status:** This section gives you basic information such as product information, network information, account information, etc.
- **Account:** This section concerns the SIP account, SIP server, proxy server, transport protocol type, audio and video codec, DTMF code settings, etc.
- **Network:** This section mainly deals with DHCP and static IP settings, RTP port settings, device deployment, etc.
- **Device:** This section includes time and language, call features, relay settings, etc.
- **Contacts:** This section allows the user to configure the local contact list stored in the device.
- **Upgrade:** This section covers firmware upgrade, device reset and reboot, auto-provisioning, and diagnosis.
- **Security:** This section is for password modification, account status, and session time-out configuration, as well as service location switching.
- **Settings:** This section includes RTSP and voice assistance setup.
- **Arming:** This section covers the arming zone, mode, disarm code, and alarm action settings.
- **PBX:** This section is for PBX configuration.

Access the Device

Akuvox indoor monitor system settings can be accessed directly or on the device web interface.

Device Start-up Network Selection

After the device boots up initially, you are required to select the network connection for the device. You can either select Ethernet or wireless network connection.

Note

Please refer to the chapter [Network Setting&Other Connections](#) for the configuration of the Ethernet and wireless network connection.

Access the Device Setting on the Device

Basic Settings

Slide left on the device's home screen and tap **Settings** to enter the basic settings screen.

Advance Settings

To access the advanced settings, tap **Advance** on the Settings screen and enter the password, **123456** by default.

Access the Device Setting on the Web Interface

You can also enter the device IP address on the web browser in order to log in to the device web interface where you can configure and adjust parameters, etc.

Check the device IP on the **Settings > System Info > Network** screen.

Note

- Download IP scanner:
<https://knowledge.akuvox.com/docs/akuvox-ip-scanner?highlight=IP>
- See detailed guide:
<https://knowledge.akuvox.com/v1/docs/en/how-to-obtain-ip-address-via-ip-scanner?highlight=IP%20Scanner>
- Google Chrome browser is strongly recommended.
- The initial username and password are **admin** and please be case-sensitive to the user names and passwords entered.

Language and Time Setting

Language

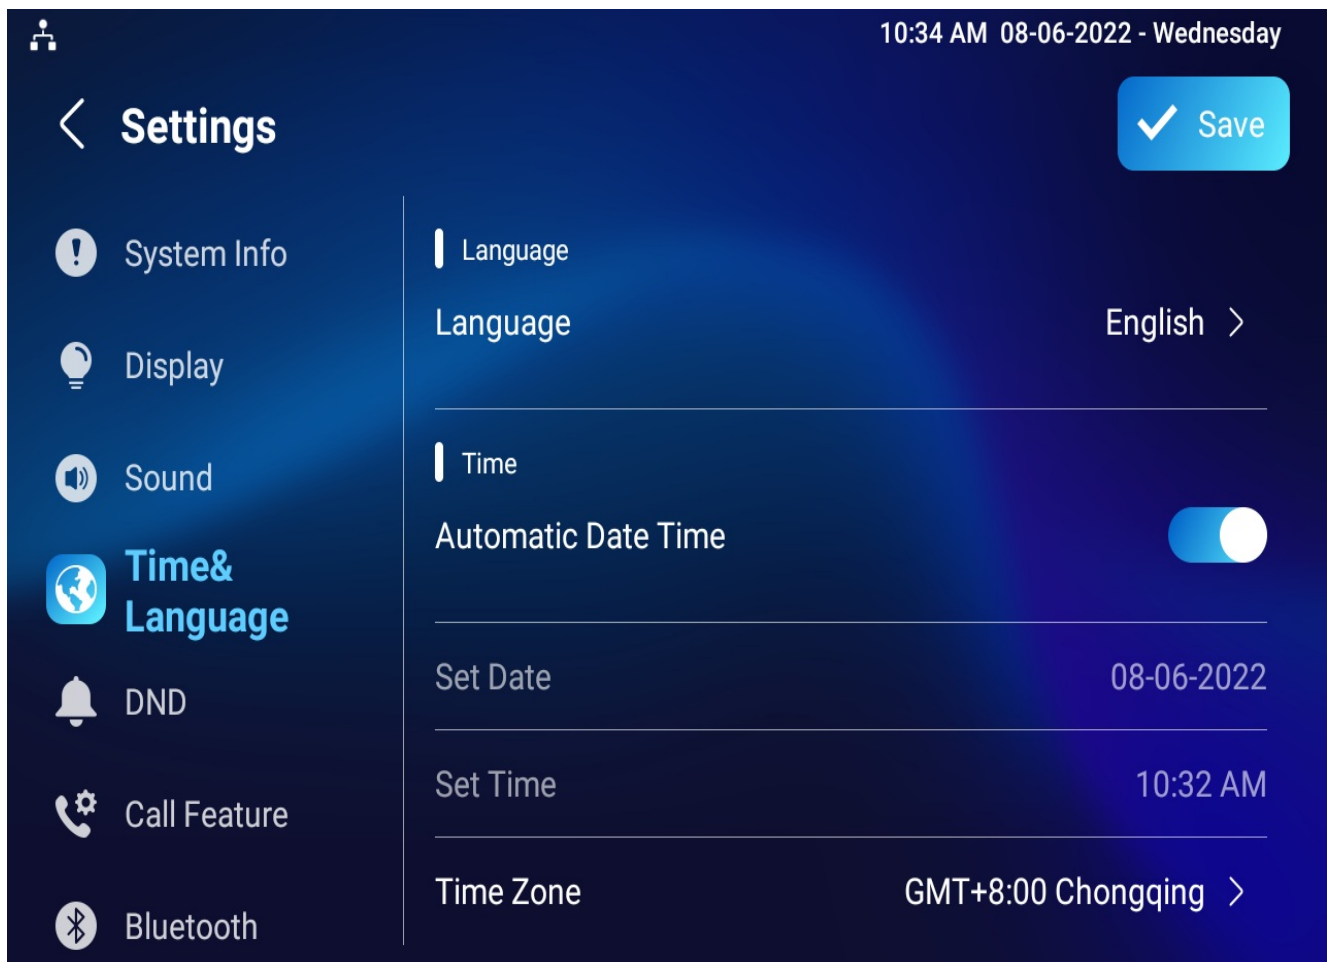

Set up the language during initial device setup or later through the device or web interface according to your preference.

Language Setting on the Device

To select the desired language, go to **Settings > Time & Language** screen.

The device supports the following languages:

- Bosnian, Czech, Danish, German, English, Spanish, French, Italian, Lithuanian, Mongolian, Norsk, Polish, Portuguese, Russian, Slovene, Swedish, Turkish, Vietnamese, Korean, Simplified Chinese, Traditional Chinese, Japanese, Ukrainian, Dutch, and Arabic.

Language Setting on the Web Interface

You can switch the device web language in the upper right corner.

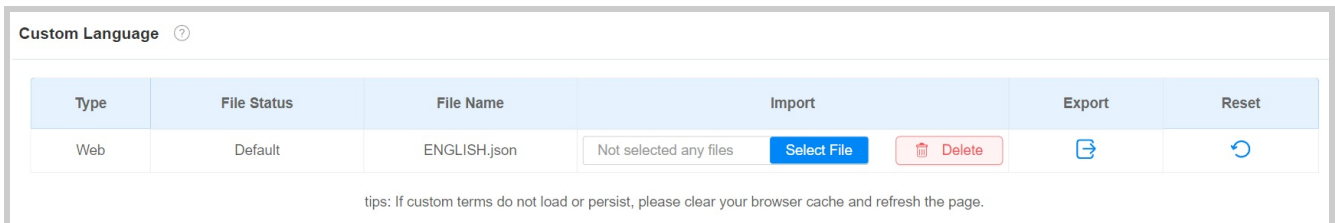

The device web interface supports the following languages:

- English, Simplified Chinese, Traditional Chinese, Russian, Czech, Portuguese, Spanish, Dutch, French, Polish, Turkish, Japanese, Mongolian, Vietnamese, and Italian.

Custom Language

To customize configuration names and prompt text, you need to export and edit the .json file before uploading the file to the device. To set it up, navigate to **Device > Time/Lang > Custom Language** interface.

Type	File Status	File Name	Import	Export	Reset
Web	Default	ENGLISH.json	Not selected any files Select File Delete	Export	Reset

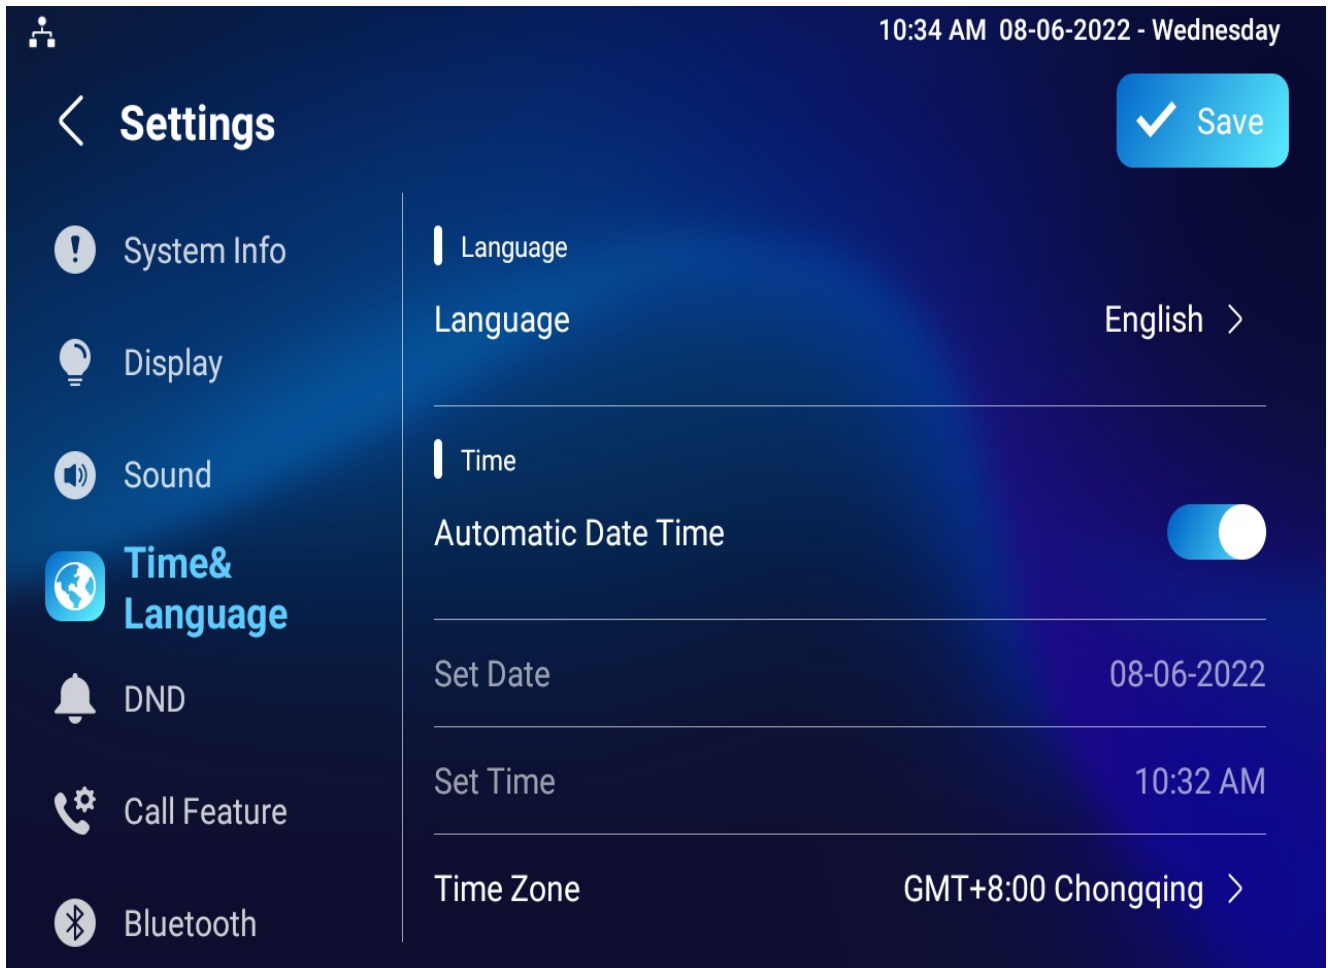

tips: If custom terms do not load or persist, please clear your browser cache and refresh the page.

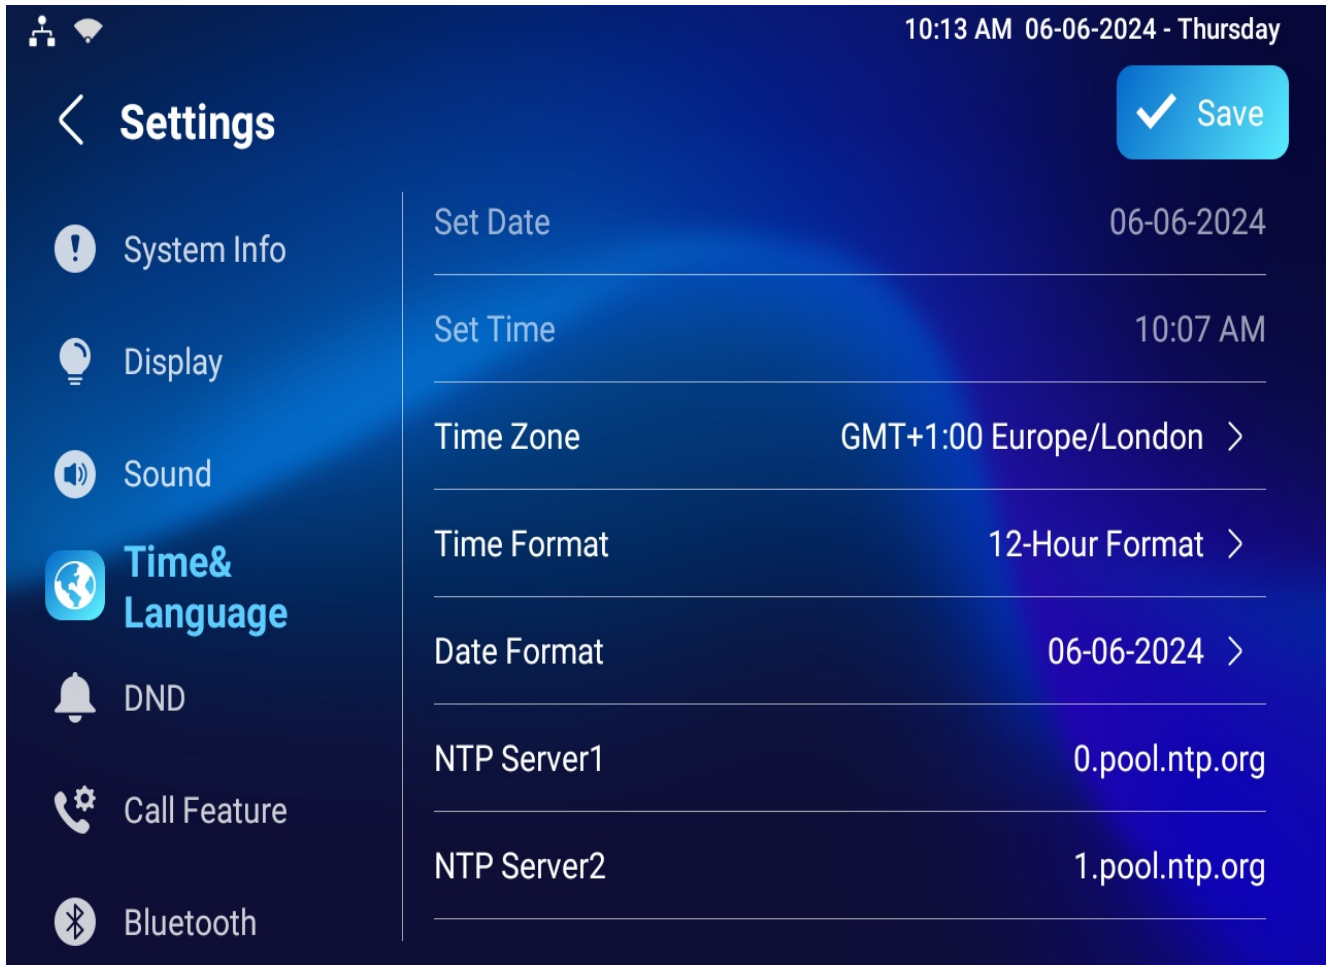

Time Setting

Time settings, including time zone, date and time format, and more, can be configured either on the device or the web interface.

Time Setting on the Device

Set up time on the device **Settings > Time & Language** screen.

- **Automatic Date Time:** The automatic date is switched on by default, which allows the date & time to be automatically set up and synchronized with the default time zone and the Network Time Protocol(NTP) server. You can also set it up manually by switching off the automatic date and entering the time and date.
- **Time Zone:** Select the specific time zone depending on where the device is used. The default time zone is GMT+0:00.
- **Time Format:** Select a 12-hour or 24-hour time format.
- **Date Format:** Select the date format from the provided options.
- **NTP Server1/2:** Enter the NTP server address. NTP server 2 is the backup.

Time Setting on the Web Interface

Time settings on the web interface allows you to set up the NTP server address that you obtained to automatically synchronize your time and date. When a time zone is selected, the device will automatically notify the NTP server of the time zone so that the NTP server can synchronize the time zone setting in your device.

Navigate to Device > Time/Lang interface.

The screenshot shows a web interface for configuring time and NTP settings. It is divided into two main sections: 'Time Setting' and 'NTP'. The 'Time Setting' section includes a checkbox for 'Automatic Date&Time' (checked), and dropdown menus for 'Time Format' (12-Hour Format), 'Date Format' (MM-DD-YYYY), 'Time Zone' (GMT+1:00 Europe/London), and text input fields for 'Date' (06-06-2024) and 'Time' (10:16 am). The 'NTP' section includes text input fields for 'Preferred Server' (0.pool.ntp.org) and 'Secondary Server' (1.pool.ntp.org). Each field has a help icon (question mark) to its right.

- **Automatic Date & Time:** The automatic date is switched on by default, which allows the date & time to be automatically set up and synchronized with the default time zone and the Network Time Protocol(NTP) server. You can also set it up manually by switching off the automatic date and entering the time and date.
- **Time Format:** Select a 12-hour or 24-hour time format.
- **Date Format:** Select the date format from the provided options.
- **Time Zone:** Select the specific time zone depending on where the device is used. The default time zone is GMT+0:00.
- **Preferred Server:** Enter the NTP server address.
- **Secondary Server:** Enter the backup server address. When the main NTP server fails, it will change to the backup server automatically.

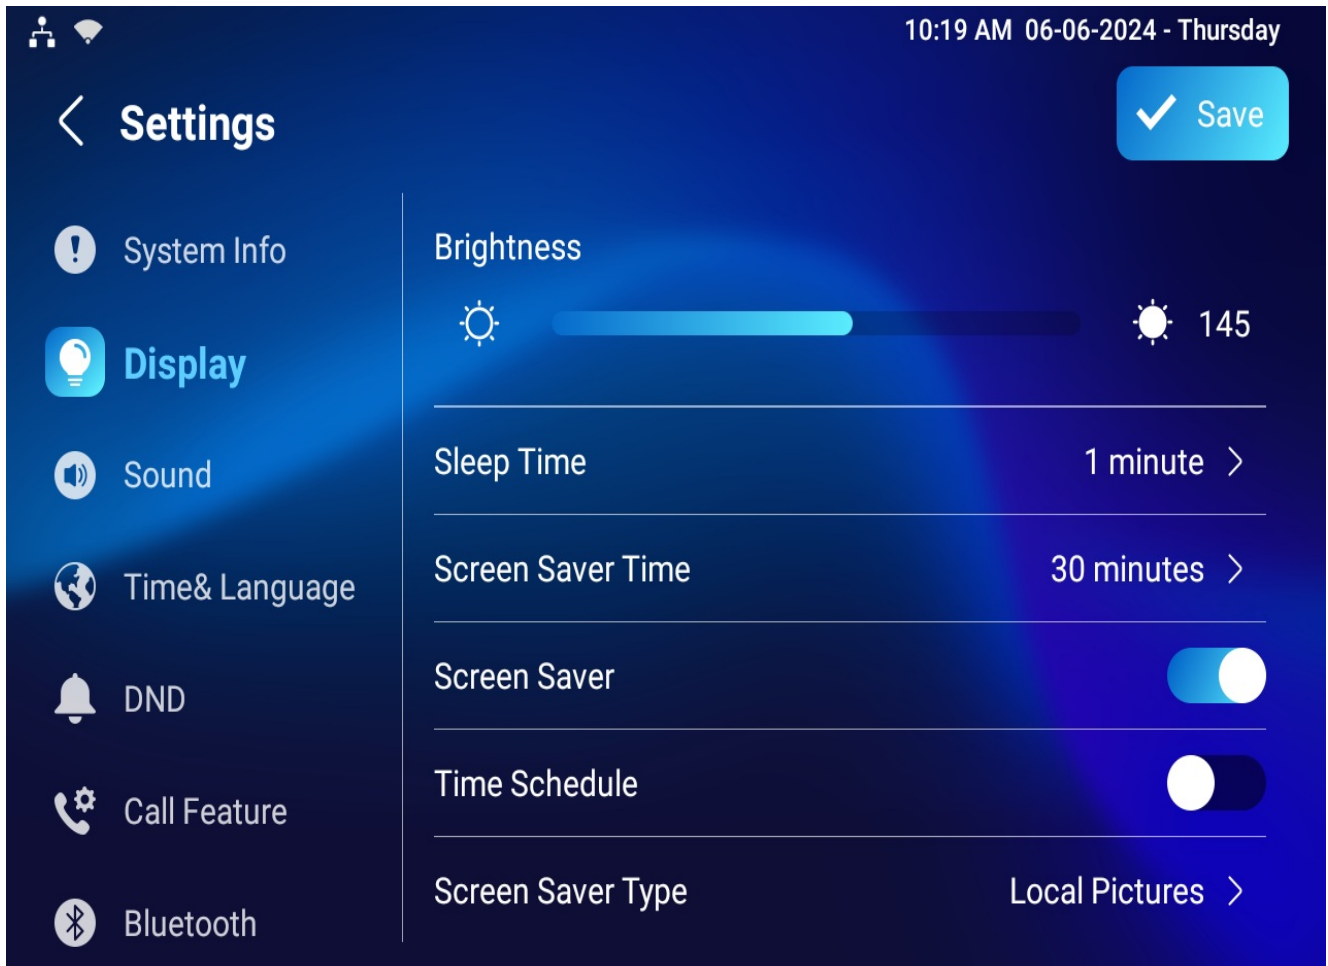

Screen Display Configuration

You can set up the device's screen display features such as screensaver to give users a better visual and operational experience.

Screen Display Setting on the Device

You can configure a variety of features of the screen display in terms of brightness, screen saver and font size, etc.

Navigate to the device **Settings > Display** screen.

- **Brightness:** Move the blue bar to adjust the screen brightness. The default brightness is 145.
- **Sleep Time:** Set the sleep timing based on the screen saver (15 seconds to 30 minutes).

- If the screen saver is enabled, the sleep time here is the screen saver start time. For example, if you set it as 1 minute, the screen saver will start automatically when the device has no operation for 1 minute.
- If the screen saver is disabled, the sleep time here is the screen turn-off time. For example, if you set it as 1 minute, the screen will be turned off automatically when the device has no operation for 1 minute.
- **Screen Saver Time:** The time for displaying the screensaver.
- **Screen Saver:** Determine whether to display the screensaver when the device goes into sleep mode.
- **Time Schedule:** Decide the specific time range to display the screen saver.
- **Screen Saver Type:** Determine what to display as the screensaver. Please refer to the table below.
- **Screen Lock:** Lock the screen after the screen is turned off(turn dark). You are required to enter the code to unlock the screen. The default is 123456.
- **Screen Clean:** Allow users to wipe the screen clean without triggering unwanted changes in the settings.
- **Font Size:** Select the font size among four options: Small, Normal, Large, and Huge.
- **Wallpaper:** It is for local wallpaper selection.

Details for the screen saver types:

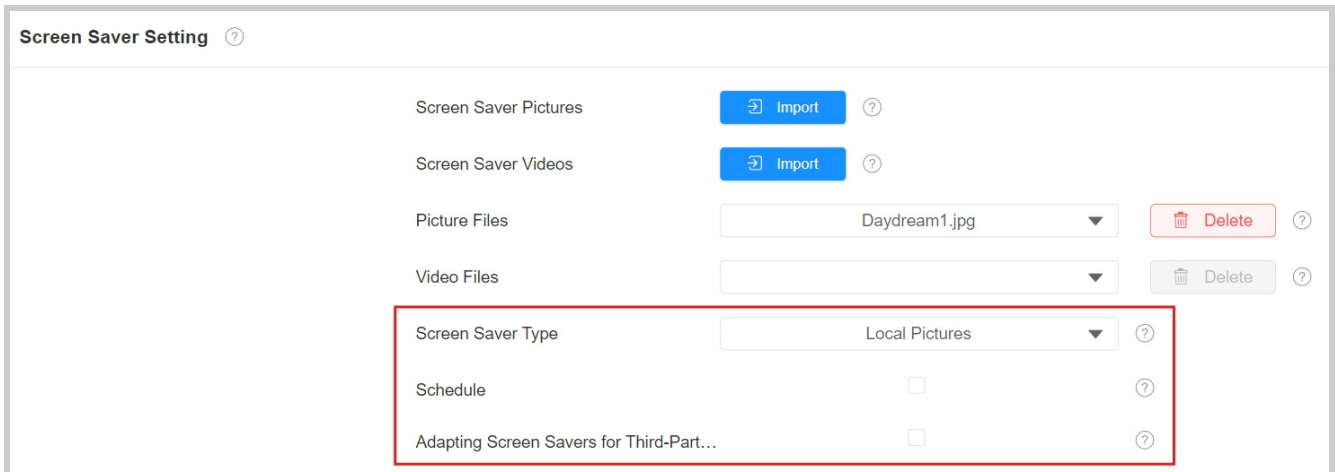

NO.	Screen Saver Type	Type Description
1	SDMC Pictures	Display pictures from SDMC as the screen saver.
2	Local Pictures	Display picture uploaded to the indoor monitor as the screen saver.
3	SDMC+Local Pictures	Display pictures from SDMC and the indoor monitor in rotation as the screen saver.
4	SDMC Videos	Display videos from SDMC as the screen saver.
5	Local Videos	Display videos from the indoor monitor as the screen saver
6	SDMC+Local Videos	Display videos from SDMC and the door phone in rotation as the screen saver.
7	Clock	Display the clock as the screen saver.

Users can also turn off the screen manually by tapping the icon .

Screen Display Setting on the Web Interface

You can configure the screen display on the **Device > Display Setting > Screen Saver Setting** interface.

- **Screen Saver Type:** Determine what to display as the screensaver. Please refer to the table below.

NO.	Screen Saver Type	Type Description
1	SDMC Pictures	Display pictures from SDMC as the screen saver.
2	Local Pictures	Display picture uploaded to the indoor monitor as the screen saver.
3	SDMC+Local Pictures	Display pictures from SDMC and the indoor monitor in rotation as the screen saver.
4	SDMC Videos	Display videos from SDMC as the screen saver.
5	Local Videos	Display videos from the indoor monitor as the screen saver
6	SDMC+Local Videos	Display videos from SDMC and the door phone in rotation as the screen saver.
7	Clock	Display the clock as the screen saver.

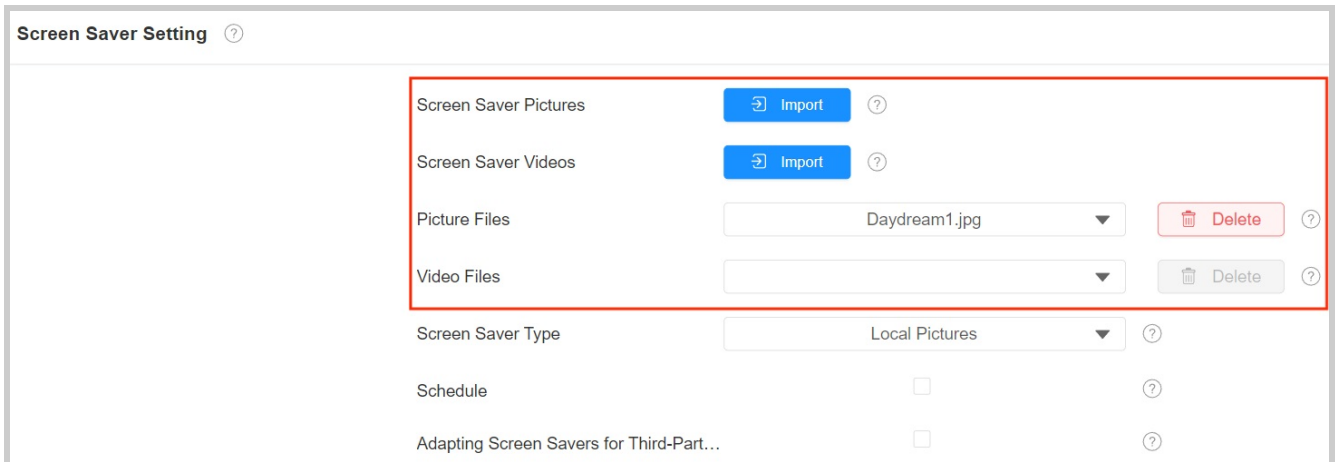

- **Schedule:** Decide the specific time range to display the screen saver.
- **Adapting Screen Savers for Third-Party Apps:** When enabled, the screen will turn off without a screen saver. The screen-saver parameters will be hidden on the web interface and the device. This feature keeps third-party apps running in the background.

Upload Screensaver

You can upload screen-saver pictures or videos to the device for a public purpose or greater visual experience.

Navigate to the web **Device > Display Setting > Screen Saver Setting** interface.

You can click **Delete** to delete the existing files.

Note

- The pictures uploaded should be in JPG, JPEG, or PNG format with a 2M maximum. The recommended resolution is 1280*800.
- The previous pictures with a specific ID order will be overwritten when the repetitive designation of pictures to the same ID order occurs.
- The videos uploaded should be in MP4, WMV, or AVI format with a 500M maximum. The recommended resolution is 1080*720.

Upload Wall Paper

You can customize your screen background picture on the device web to achieve the visual effect and experience you need for your personalized screen background display.

Navigate to **Device > Display Setting > Wallpaper** interface.

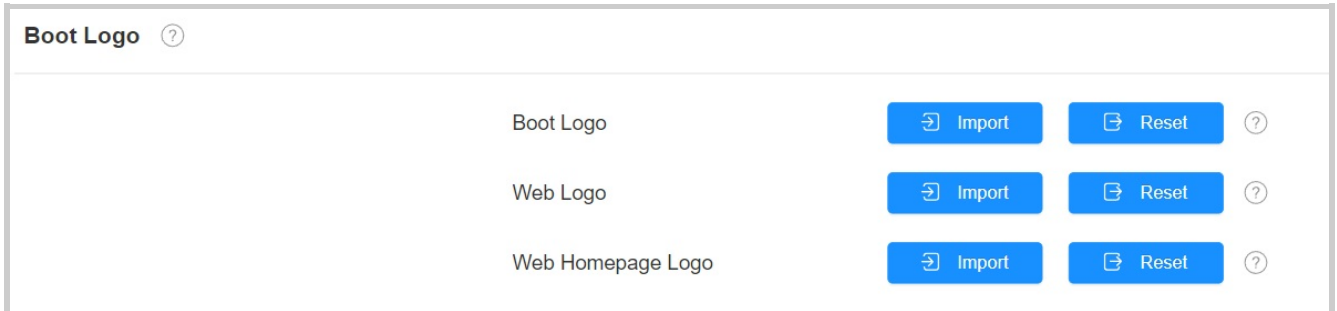

Note

- The pictures uploaded should be in JPG, JPEG, or PNG format with a 2M maximum.
- The recommended resolution is 1280*800.

Upload Device Booting Image

You can upload the booting image to be displayed during the device's booting process if needed.

Go to **Device > Display Setting > Boot Logo** interface.

- **Boot Logo:** The logo will appear on the screen when you reboot the device. Supported format: ZIP and PNG; Max size: 1280*800 png.
- **Web Logo:** The logo will appear in the upper left corner of the web interface. Supported format: JPG and PNG; Max size: 252*76 png.
- **Web Homepage Logo:** The logo will appear on the login page of the web interface. Supported format: JPG and PNG; Max size: 182*55 png.

Home Screen Display

You can select the **Default** or **Call List** home screen display.

Go to **Device > Display Setting > Theme** interface.

Default Home Screen:

Call List Screen:

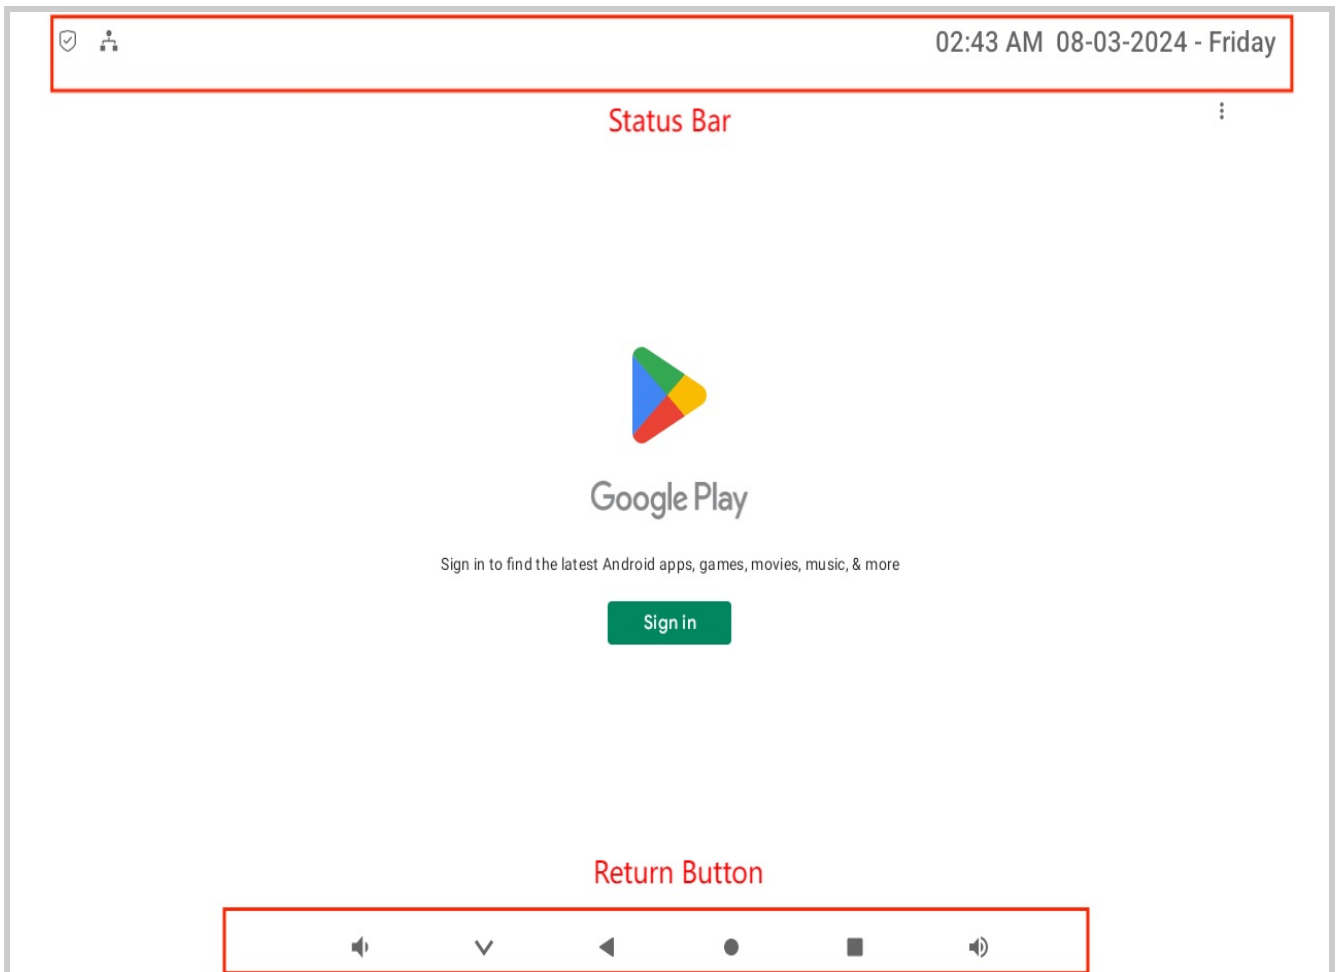

Status Bar Display Configuration

You can configure whether to display the status bar and return button when running a third-party app.

To set it up, go to the **Device > Display Setting > Display Settings** interface.

- **Status Bar Visible:** Determine whether to display the status bar when running a third-party app.
- **Return Button Hide Time:** Determine that the return button will be concealed for certain seconds. If you select **Never**, the button will not be displayed. Users can swipe up on the screen to make the button appear.

Icon Display Configuration

Akuvox indoor monitor allows you to customize icon display on the **Home** screen and **More** screen for the convenience of your operation on the device web.

To set it up, navigate to **Device > Display Setting** interface.

Home Page Display Example

Area	Type	Value	Label	Type(max size:100*100)
Area1	Call			Not selected any files Select File Delete
Area2	Message			Not selected any files Select File Delete
Area3	DND			
Area4	Monitor			Not selected any files Select File Delete

- **Type:** Select the functional icon to be displayed on the home screen. You can select Unlock in all the four areas.
- **Value:** The value field for **Custom APK** will be automatically filled in if you have already installed a third-party app. If you select **Browser**, you are required to enter the URL of the browser before the browser icon can be displayed.
- **Label:** Name the icon. The DND icon cannot be renamed.
- **Type(max size: 100*100):** Click to upload the icon picture. The maximum icon size is 100*100. The picture format can be JPG, JPEG, and PNG.

You can click **Example** to see the icon layout.

To easily access the third-party app, you can create an Application icon on the home screen. Tap the icon and run the desired app.

Configure the icons displayed on the **More Page Display** section on the same interface.

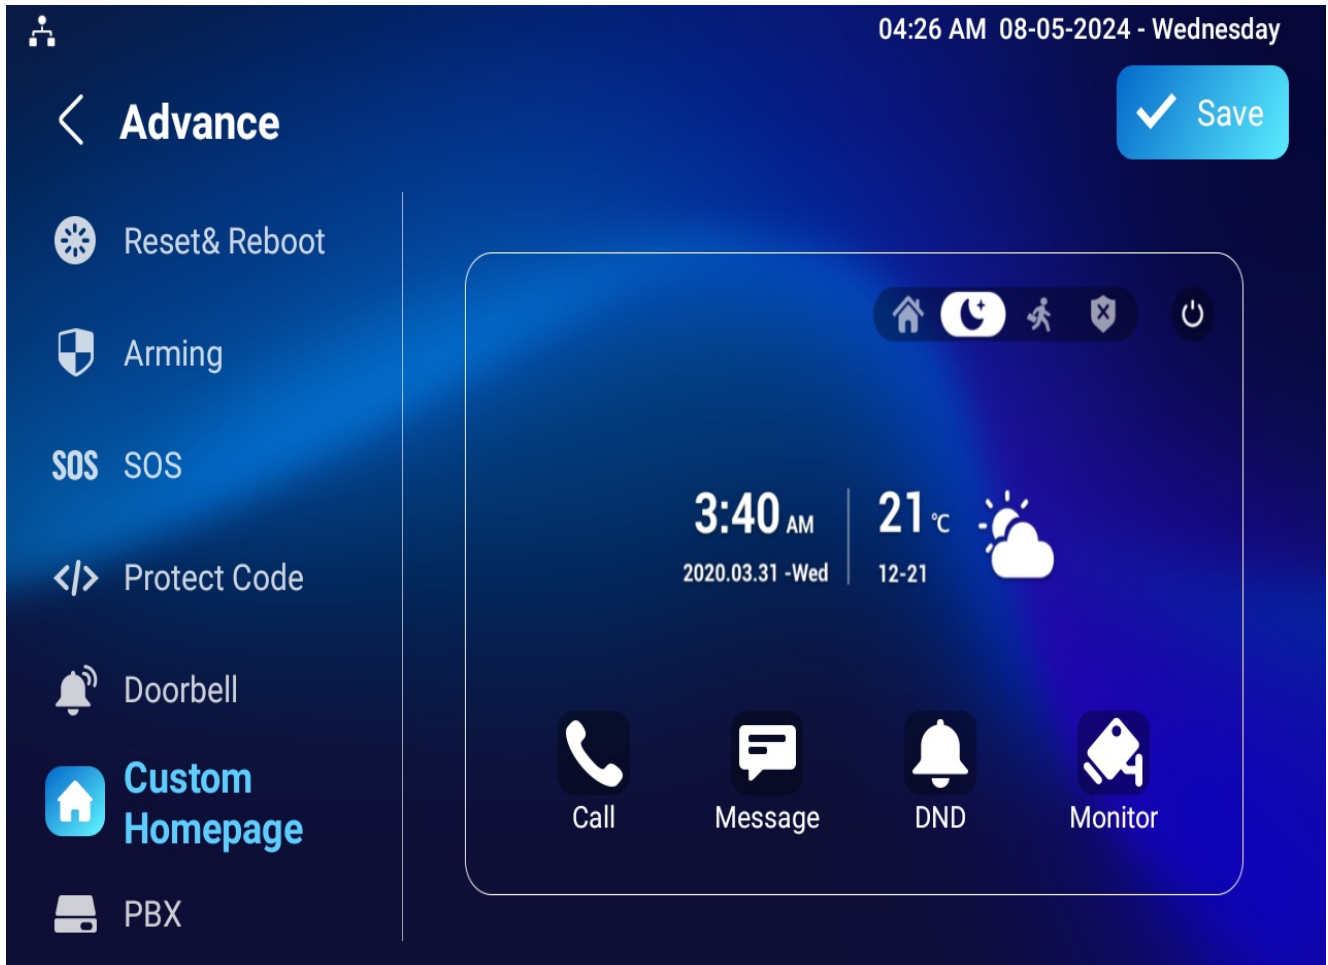

More Page Display Example

Area	Type	Value	Label	Type(max size:100*100)
Area1	Contacts			Not selected any files Select File Delete
Area2	Settings			Not selected any files Select File Delete
Area3	Arming			Not selected any files Select File Delete
Area4	Application			Not selected any files Select File Delete
Area5	N/A			Not selected any files Select File Delete
Area6	N/A			Not selected any files Select File Delete

The screenshot shows a dark-themed device homepage with a grid of function icons. The icons are arranged in two rows. The first row contains 'Contacts' (person icon), 'Settings' (gear icon), and 'Arming' (shield icon). The second row contains 'Application' (cube icon), 'Message' (speech bubble icon), 'DND' (bell icon), and 'Monitor' (camera icon). At the bottom, there are three small circles for navigation.

You can also customize the homepage display by selecting your favorite functions on the device screen.

To configure it, tap **Settings > Advance**, and enter the default system code 123456. Tap **Custom Homepage**, then tap any of the icons to select the desired function.

Function Tabs Configuration

You can set up the display of functional tabs on the talking, monitor, and call preview screens.

To set up tabs on the Talking screen, go to **Device > Display Setting > Softkey in Talking Page** interface.

Softkey In Talking Page ?		
Key	Display	Label
Mute	Enabled	
Switch	Enabled	
Capture	Enabled	
Keyboard	Enabled	
Hang Up	Enabled	

- **Mute:** Tap to mute the talking.
- **Switch:** Tap to switch between Video and Audio talking mode.
- **Capture:** Tap to take a screenshot of the talking screen.

- **Keyboard:** Tap to display the keyboard.
- **Hang up:** Tap to end the call.

To set up tabs on the **Call Preview** screen, go to **Device > Display Setting > Softkey in Call-Preview Page** interface.

SoftKey In Call-Preview Page ?		
Key	Display	Label
Capture	Enabled ▼	
Answer	Enabled ▼	
Hang Up	Enabled ▼	

- **Capture:** Tap to take a screenshot of the preview screen.
- **Answer:** Tap to answer the incoming call.
- **Hang up:** Tap to end the call.

To set up tabs on the **Monitor** screen, go to **Device > Display Setting > Softkey in Monitor Page** interface.

SoftKey In Monitor Page ?		
Key	Display	Label
Capture	Enabled ▼	
Cancel	Enabled ▼	

- **Capture:** Tap to take a screenshot of the preview screen.
- **Cancel:** Tap to exit the monitor screen.

Unlock Tabs Configuration

You can customize the unlock tab and select the relay type on the talking, monitor, and call preview screen for the door opening. Before users can press the tab to unlock, relays should be configured. Please refer to the [Access Control Configuration](#) chapter.

To set up the unlock tab on the talking screen, go to **Device > Relay > SoftKey In Talking Page** interface.

Softkey In Talking Page ?

Key	Status	Display Name	Type
Key1	Enabled	Unlock1	Remote Relay DTMF1
Key2	Enabled	Unlock2	Remote Relay DTMF2
Key3	Enabled	Unlock3	Remote Relay DTMF3

- **Status:** With it enabled, the unlock tab will be displayed on the talking screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Scroll down to set up the unlock tab on the **Monitor** screen on the **SoftKey In Monitor Page** section.

SoftKey In Monitor Page ?

Status	Display Name	Type
Enabled	Unlock	Remote Relay HTTP
Disabled	Unlock	Remote Relay HTTP
Disabled	Unlock	Remote Relay HTTP

- **Status:** With it enabled, the unlock tab will be displayed on the monitor screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

Scroll down to set up the unlock tab on the **Call Preview** screen on the **SoftKey In Call-Preview Page** section.

SoftKey In Call-Preview Page ?

Status	Display Name	Type
Enabled	Unlock	Remote Relay HTTP

- **Status:** With it enabled, it will be displayed on the call preview screen.
- **Display Name:** Name the unlock tab.
- **Type:** Select the relay trigger type according to the actual setup.

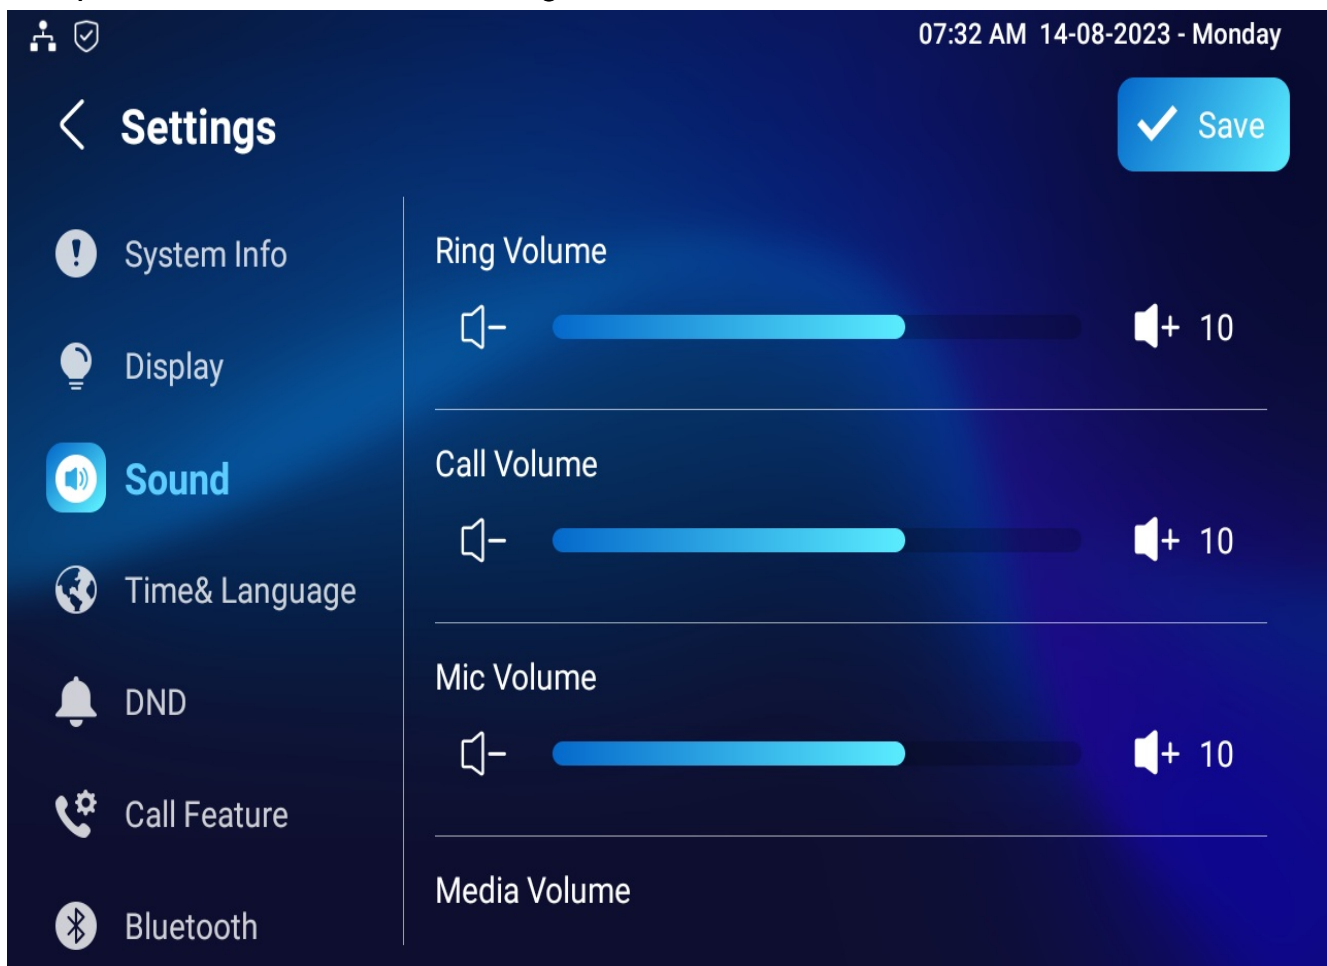

Sound and Volume Configuration

Akuvox indoor monitor provides you with various types of ringtones and volume configurations. You can configure them on the device directly or on the web interface.

Volume Configuration

Configure Volume on the Device

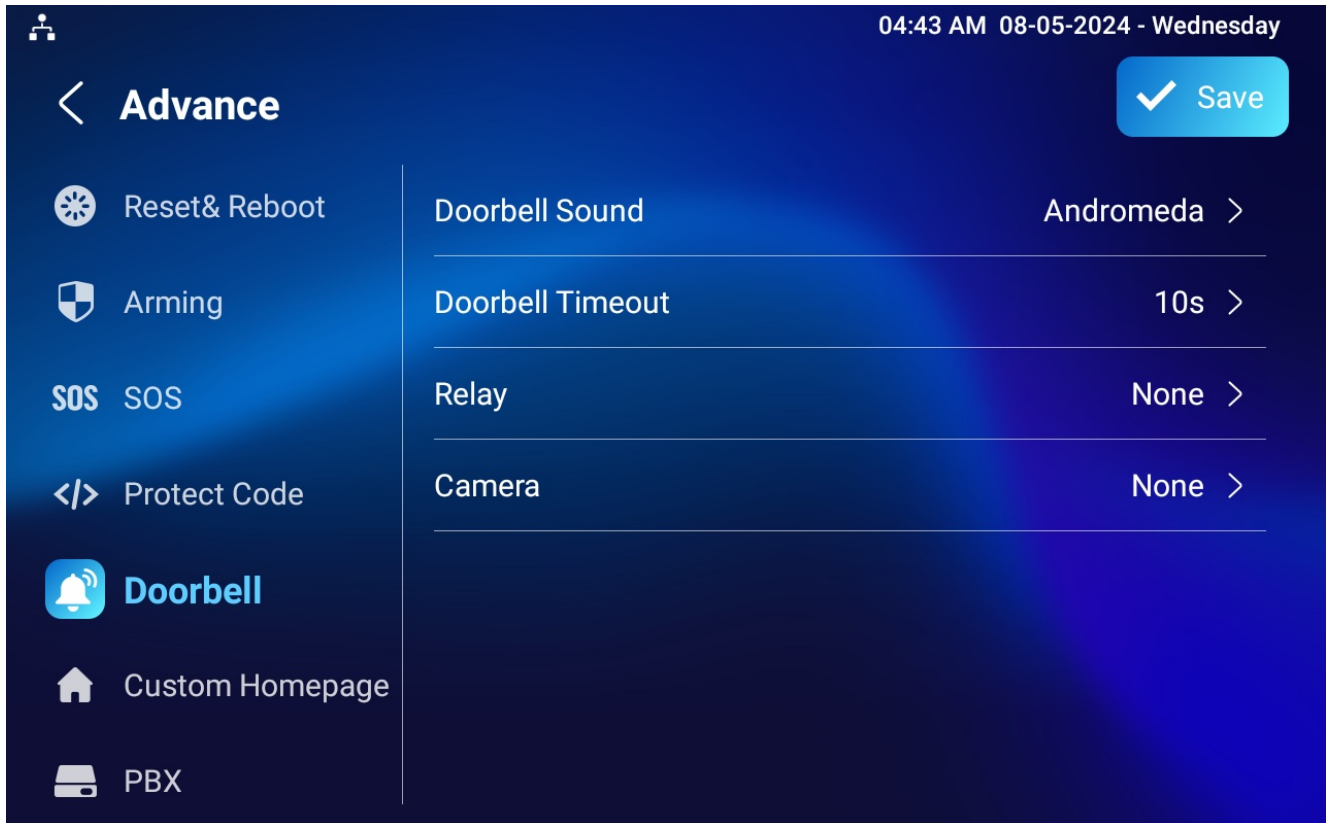

Set up the volumes on the device **Settings > Sound** screen.

- **Ring Volume:** The incoming call ringtone volume.
- **Call Volume:** The speaker volume during the call.
- **Mic Volume:** The microphone volume.
- **Media Volume:** The volume for the video screen saver.

- **Touch Sound:** The icon tapping sound.
- **Phone Ringtone:** The ringtone for incoming calls.
- **Notification Sound:** The ringtone for the incoming messages.

You can configure the doorbell sound and select the local relay to be triggered along with the doorbell on the **Settings > Advance > Doorbell** screen.

- **Doorbell Sound:** Select the doorbell sound.
- **Doorbell Timeout:** Set the doorbell duration (from 10 seconds to 5 minutes).
- **Relay:** Select the local relay to be triggered along with the doorbell.
- **Camera:** Select the camera to be triggered along with the doorbell.

Configure Volume on the Web Interface

You can configure volumes on the **Device > Audio** interface.

Volume Control ?

Ring Volume	<input type="text" value="10"/>	(0~15) ?
Call Volume	<input type="text" value="10"/>	(1~15) ?
Mic Volume	<input type="text" value="10"/>	(1~15) ?
Media Volume	<input type="text" value="10"/>	(0~15) ?

Touch Sound ?

Touch Sound Enabled	<input type="text" value="Enabled"/>	?
---------------------	--------------------------------------	---

Upload Tones

You can customize ringtones on the **Device > Audio** interface. Click **Import** to upload the ringtone and **Delete** to delete the existing one.

Doorbell Sound Upload ?

Doorbell Sound Upload	<input type="button" value="Import"/>	?
Doorbell Sound	<input type="text"/>	<input type="button" value="Delete"/> ?

Alarm Ringtone Upload ?

Alarm Ringtone Upload	<input type="button" value="Import"/>	?
Alarm Ringtone	<input type="text" value="default.wav"/>	<input type="button" value="Delete"/> ?

Ring Tone Upload ?

Ring Tone Upload	<input type="button" value="Import"/>	?
Ring Tone	<input type="text"/>	<input type="button" value="Delete"/> ?

Note

The files to be uploaded should be in WAV or MP3 format. No limitation on the file size.

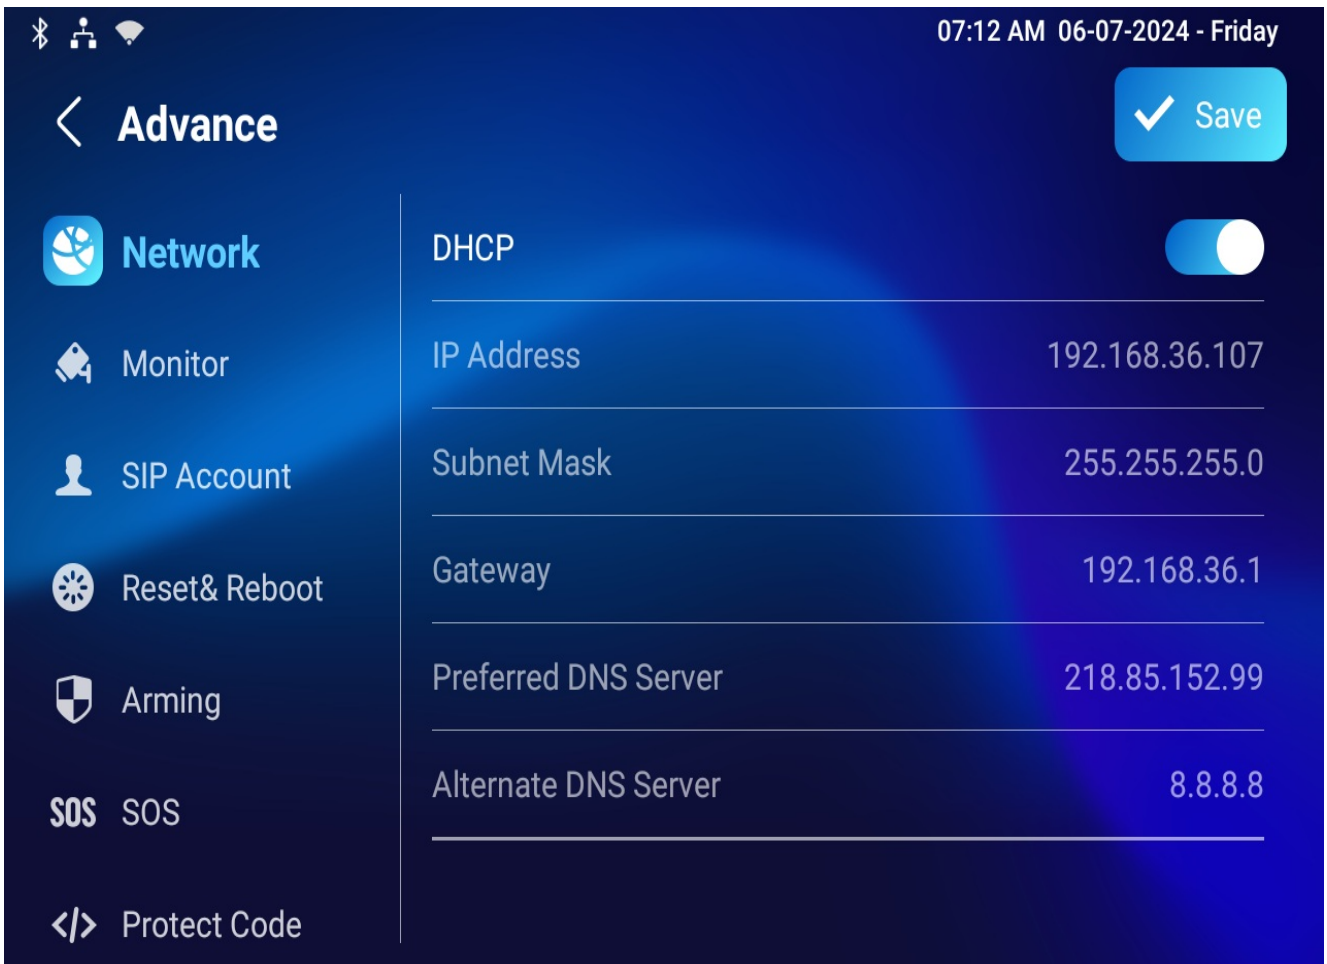

Network Setting & Other Connection

Device Network Configuration

To ensure normal functioning, make sure that the device has its IP address set correctly or obtained automatically from the DHCP server.

Configure Device Network Connection on the Device

Check and configure the network connection on the device **Settings > Advance > Network** screen.

- **DHCP:** DHCP mode is the default network connection. If the DHCP mode is turned on, the device will be assigned by the DHCP server with an IP address, subnet mask, default gateway, and DNS server address automatically. If you turn off the DHCP mode, the device will be changed to static IP mode, and the IP address, subnet mask, default gateway, and DNS server address have to be manually configured according to the actual network environment.
- **IP Address:** The IP address when the static IP mode is selected.
- **Subnet Mask:** The subnet mask should be set up according to the actual network environment.
- **Gateway:** The gateway should be set up according to the IP address.
- **Preferred & Alternate DNS Server:** The preferred and alternate Domain Name Server(DNS). The preferred DNS server is the primary DNS address while the alternate DNS server is the secondary one. The device will connect to the alternate server when the primary server is unavailable.

Note

- You can press System Info, and then press Network on the Settings screen to check device network status.
- The default code to enter advanced settings is 123456.

Configure Device Network Connection on the Web Interface

Check the network on the web **Status > Network Information** interface.

Network Information ?	
Network Type	LAN
LAN Port Type	DHCP Auto
LAN Link Status	Connected
LAN IP Address	192.168.36.116
LAN Subnet Mask	255.255.255.0
LAN Gateway	192.168.36.1
Preferred DNS Server	218.85.152.99
Alternate DNS Server	8.8.8.8
WLAN IP Address	192.168.36.120
WLAN Subnet Mask	255.255.255.0
WLAN Gateway	192.168.36.1
WLAN DNS	218.85.152.99
Primary NTP	0.pool.ntp.org
Secondary NTP	1.pool.ntp.org

Check and configure the network connection on the device web **Network > Basic > LAN Port** interface.

LAN Port ?	
Type	<input type="radio"/> DHCP <input checked="" type="radio"/> Static IP ?
LAN IP Address	<input type="text" value="192.168.36.116"/> ?
LAN Subnet Mask	<input type="text" value="255.255.255.0"/> ?
Default Gateway	<input type="text" value="192.168.36.1"/> ?
Preferred DNS Server	<input type="text" value="218.85.152.99"/> ?
Alternate DNS Server	<input type="text" value="8.8.8.8"/> ?

- **Type:**
 - **DHCP** mode will enable the indoor monitor to be assigned by the DHCP server with IP address, subnet mask, default gateway, and DNS address automatically.

- **Static IP** allows you to enter the IP address, subnet mask, default gateway, and DNS address manually according to the actual network environment.
- **LAN IP Address**: The IP address when the static IP mode is selected.
- **LAN Subnet Mask**: The subnet mask should be set up according to the actual network environment.
- **Default Gateway**: The gateway should be set up according to the IP address.
- **Preferred/Alternate DNS Server**: The preferred and alternate Domain Name Server(DNS). The preferred DNS server is the primary DNS address while the alternate DNS server is the secondary one. The device will connect to the alternate server when the primary server is unavailable.

Device Deployment in Network

To facilitate device control and management, configure Akuvox intercom devices with details such as location, operation mode, address, and extension numbers.

Deploy the device in the network on the web **Network > Advanced > Connect Setting** interface.

The screenshot shows the 'Connect Setting' interface with the following configuration:

- Connect Mode:** SDMC
- Discovery Mode:**
- Device Node:** 1 1 1 1 1
- Device Extension:** 1
- Device Location:** Indoor Monitor

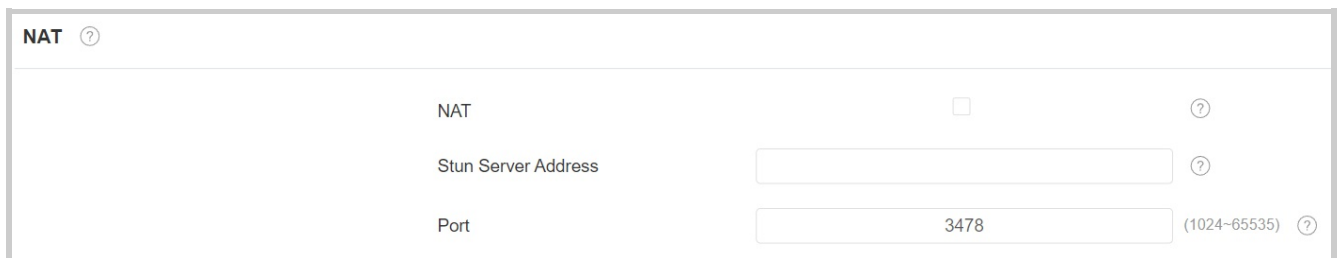

- **Connect Mode**: It is automatically set up according to the actual device connection with a specific server in the network such as **SDMC**, **Cloud**, or **None**. **None** is the default factory setting indicating the device is not in any server type.
- **Discovery Mode**: With discovery mode enabled, the device can be discovered by other devices in the network. Uncheck the box if you want to conceal the device.
- **Device Node**: Specify the device address by entering device location info from the left to the right: Community, Unit, Stair, Floor, and Room in sequence.
- **Device Extension**: The device extension number for the device you installed.

- **Device Location:** The location in which the device is installed and used.

Device NAT Setting

Network Address Translation(NAT) lets devices on a private network use a single public IP address to access the internet or other public networks. NAT saves the limited public IP addresses, and hides the internal IP addresses and ports from the outside world.

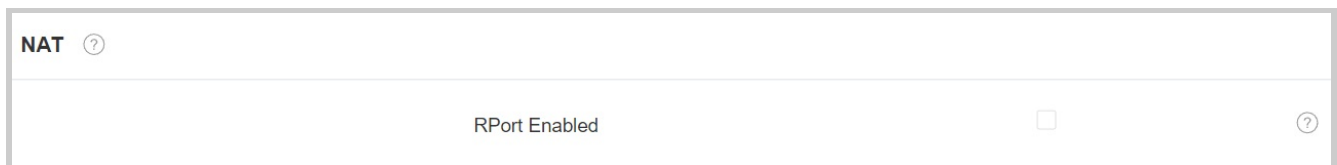

To set up NAT, go to **Account > Basic > NAT** interface.

NAT	<input type="checkbox"/>	?
Stun Server Address	<input type="text"/>	?
Port	<input type="text" value="3478"/>	(1024-65535) ?

- **Stun Server Address :** Set the SIP server address in the Wide Area Network(WAN).
- **Port:** Set the SIP server port.

Then go to **Account > Advanced > NAT** interface.

RPort Enabled	<input type="checkbox"/>	?
---------------	--------------------------	---

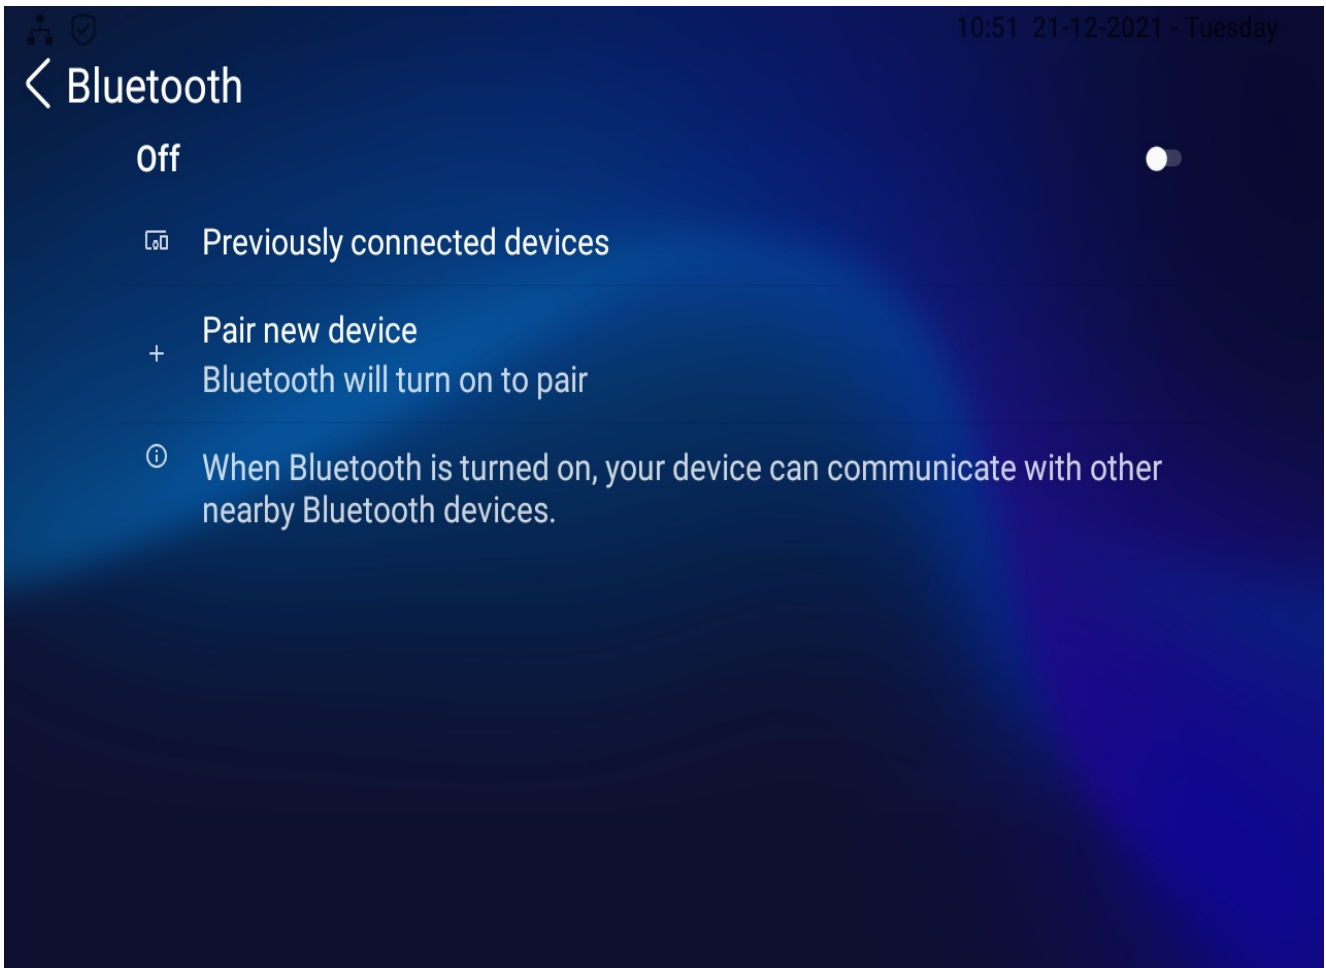

- **RPort Enabled:** Enable the RPort when the SIP server is in WAN for the SIP account registration.

Device Bluetooth Setting

Device Bluetooth Pairing

You need to enable the Bluetooth feature on the device before you can pair the indoor monitor with other Bluetooth-featured devices.

To set it up, go to **Settings > Bluetooth** screen.

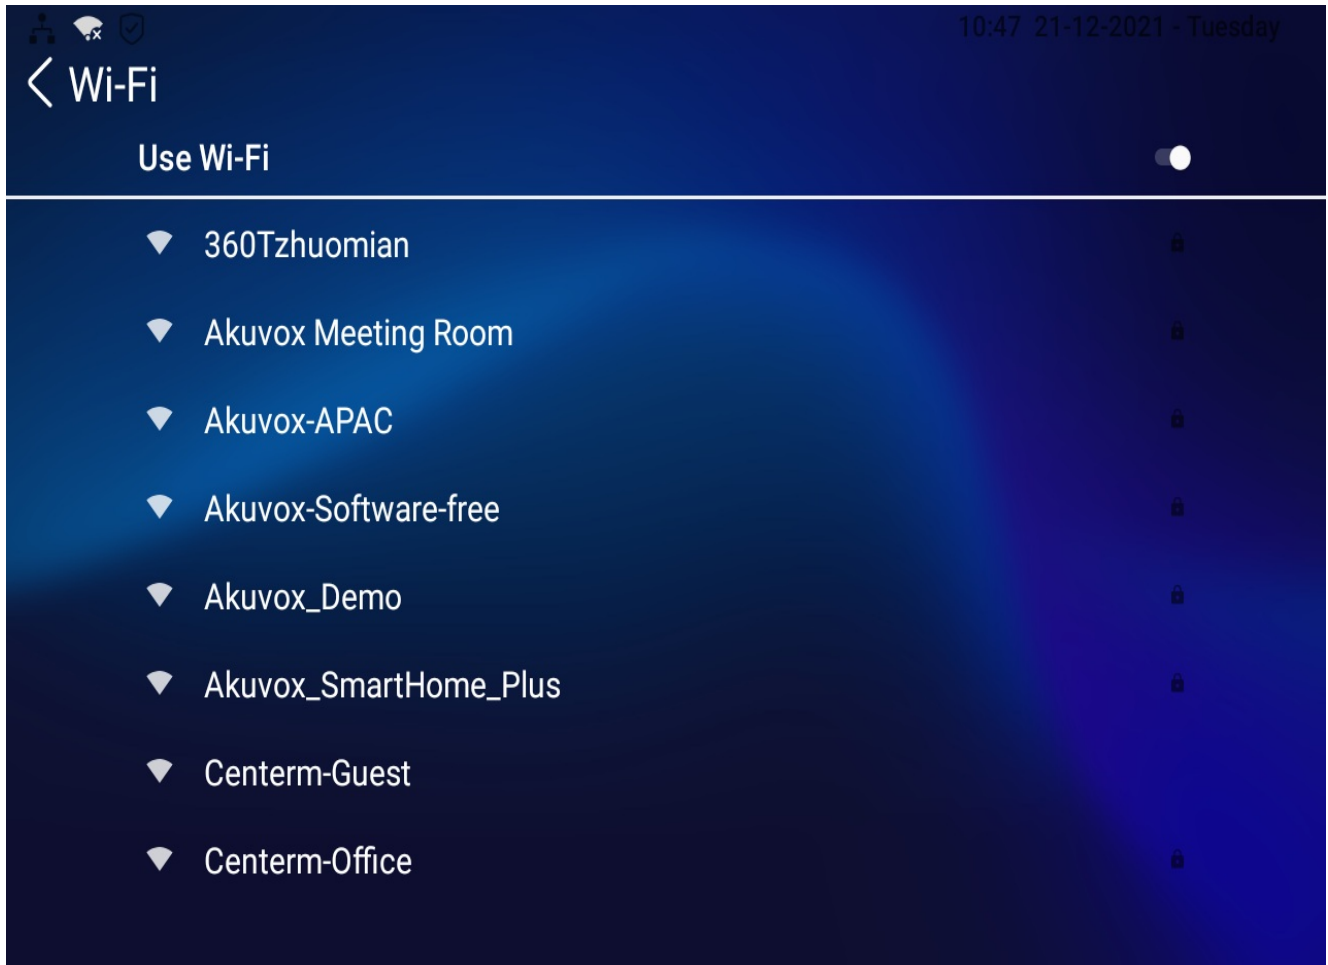

Device Bluetooth Data Transmission

Transfer data via Bluetooth by pressing **Pair new device** and selecting the device for pairing.

Device Wi-Fi Setting

Set the Wi-Fi connection on the device **Settings > Wi-Fi** screen.

SNMP

Simple Network Management Protocol(**SNMP**) is a protocol for managing IP network devices. It allows network administrators to monitor devices and receive alerts for attention-worthy conditions. SNMP provides variables describing system configuration, organized in hierarchies and described by Management Information Bases (MIBs).

To set it up, navigate to the web **Network > Advanced > SNMP** interface.

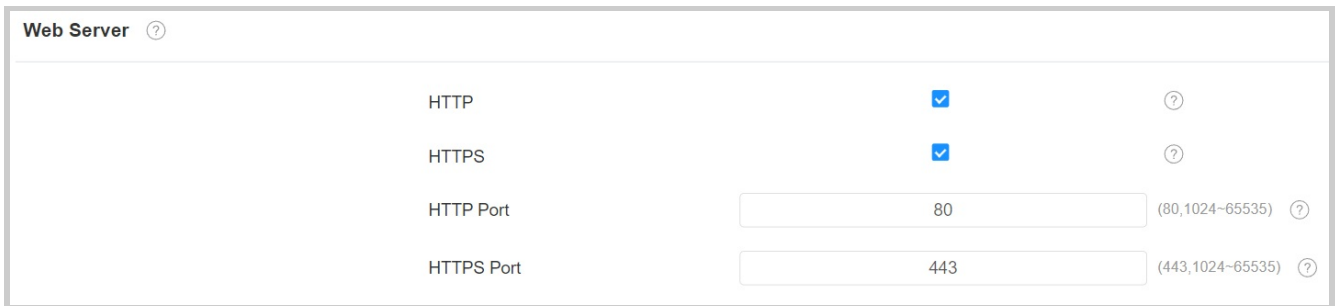

SNMP ?	
Enabled	<input type="checkbox"/> ?
Port	<input type="text" value="(1024-65535)"/> ?
Trusted IP	<input type="text"/> ?

- **Port:** Set a specific port for the data transmission from 1024-65535.
- **Trusted IP:** Enter the third-party IP address

Device Web HTTP Setting

This function manages device website access. The door phone supports two remote access methods: HTTP and HTTPS (encryption).

To set it up, go to the **Network > Advanced > Web Server** interface.

The screenshot shows the 'Web Server' configuration page. It has a title 'Web Server' with a help icon. Below the title, there are four rows of settings:

Setting	Value	Range
HTTP	<input checked="" type="checkbox"/>	(80, 1024-65535)
HTTPS	<input checked="" type="checkbox"/>	(443, 1024-65535)
HTTP Port	<input type="text" value="80"/>	(80, 1024-65535)
HTTPS Port	<input type="text" value="443"/>	(443, 1024-65535)

- **HTTP/HTTPS:** HTTP and HTTPS are enabled by default.
- **HTTP/HTTPS Port:** Specify the web server port for accessing the device web interface via HTTP/HTTPS.

Contacts Configuration

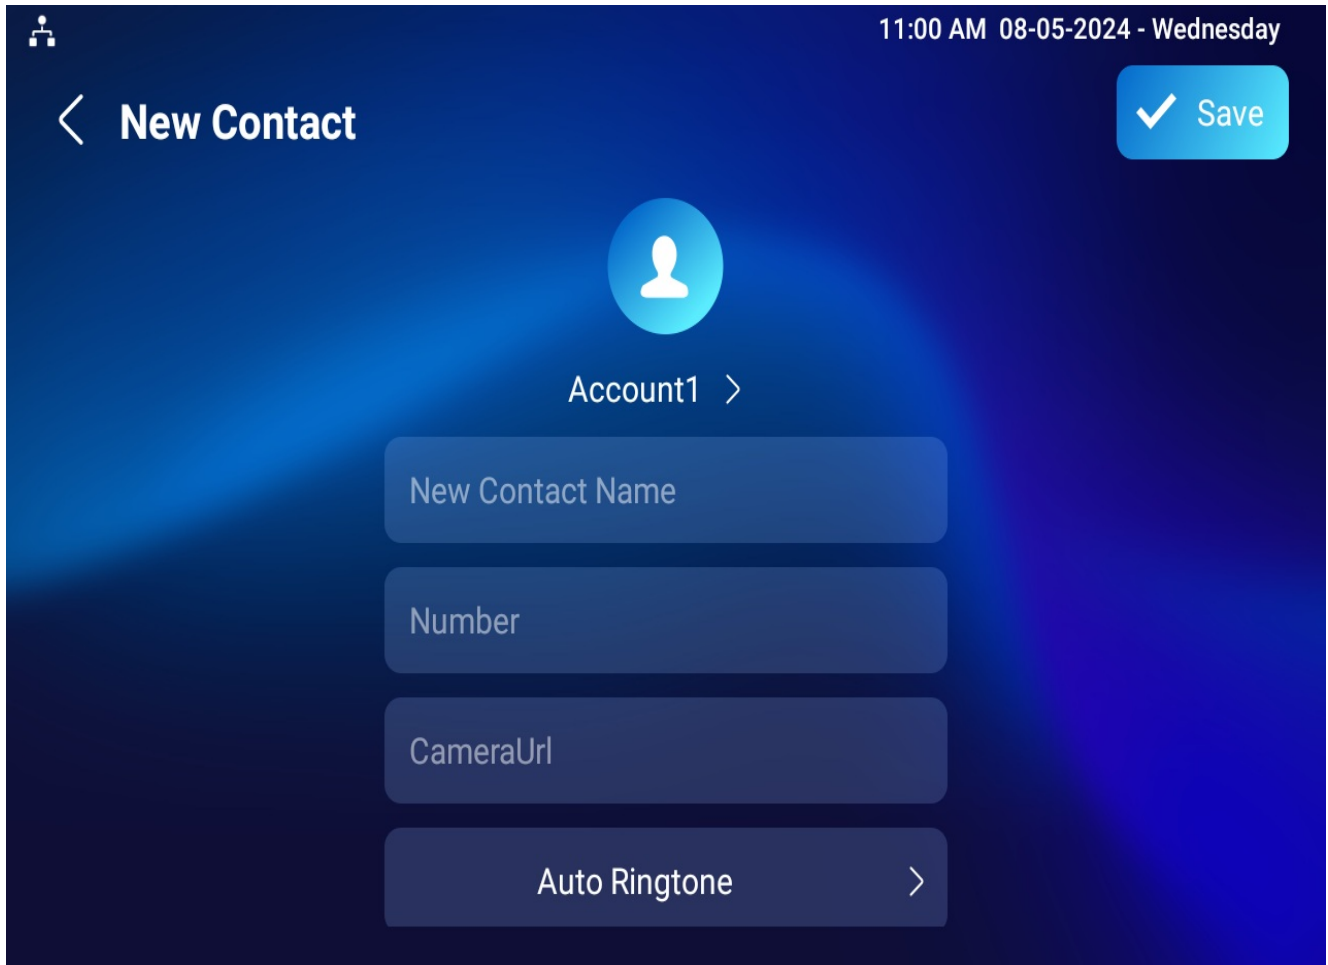

Contacts Configuration on the Device

You can add, edit, and delete contacts on the device **Contacts > Local Contacts** screen directly.

Add Contact

Press the **Add** icon to add a contact.

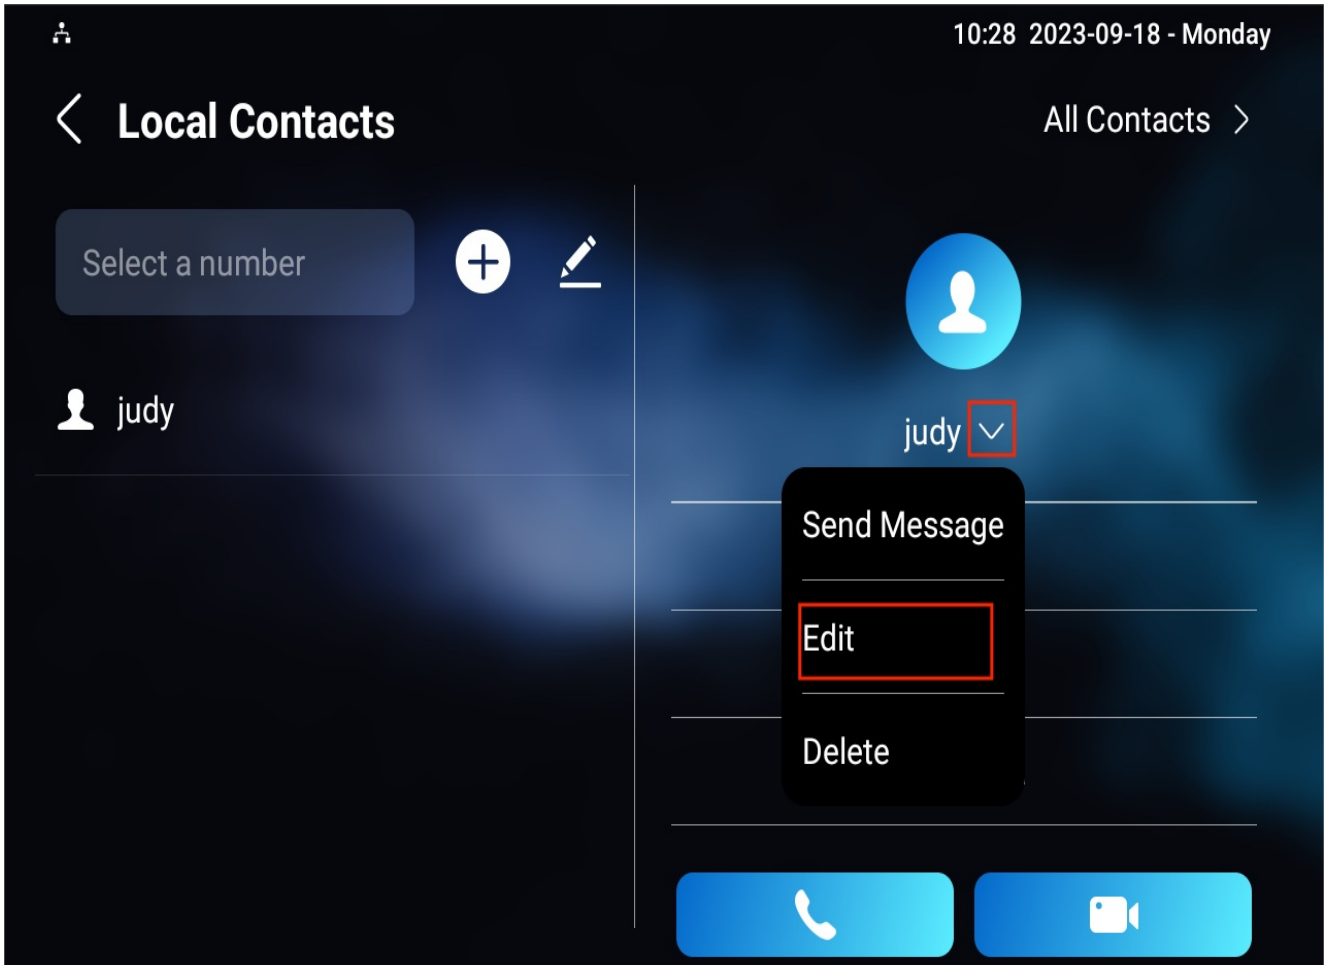

- **Account 1:** The account to make the call, Account 1 or Account 2.
- **New Contact Name:** Name the contact to distinguish it from others.
- **Number:** The IP or SIP number.
- **CameraUrl:** The RTSP URL for video preview.
- **Auto Ringtone:** The ringtone for incoming calls.

Note

Akuvox devices' RTSP URL format is rtsp://device IP/live/ch00_0. If you use a third-party device, please confirm the URL format with the service provider.

Edit Contact

You can check and edit the existing contacts in the phonebook list. Choose one and press **Edit** to modify.

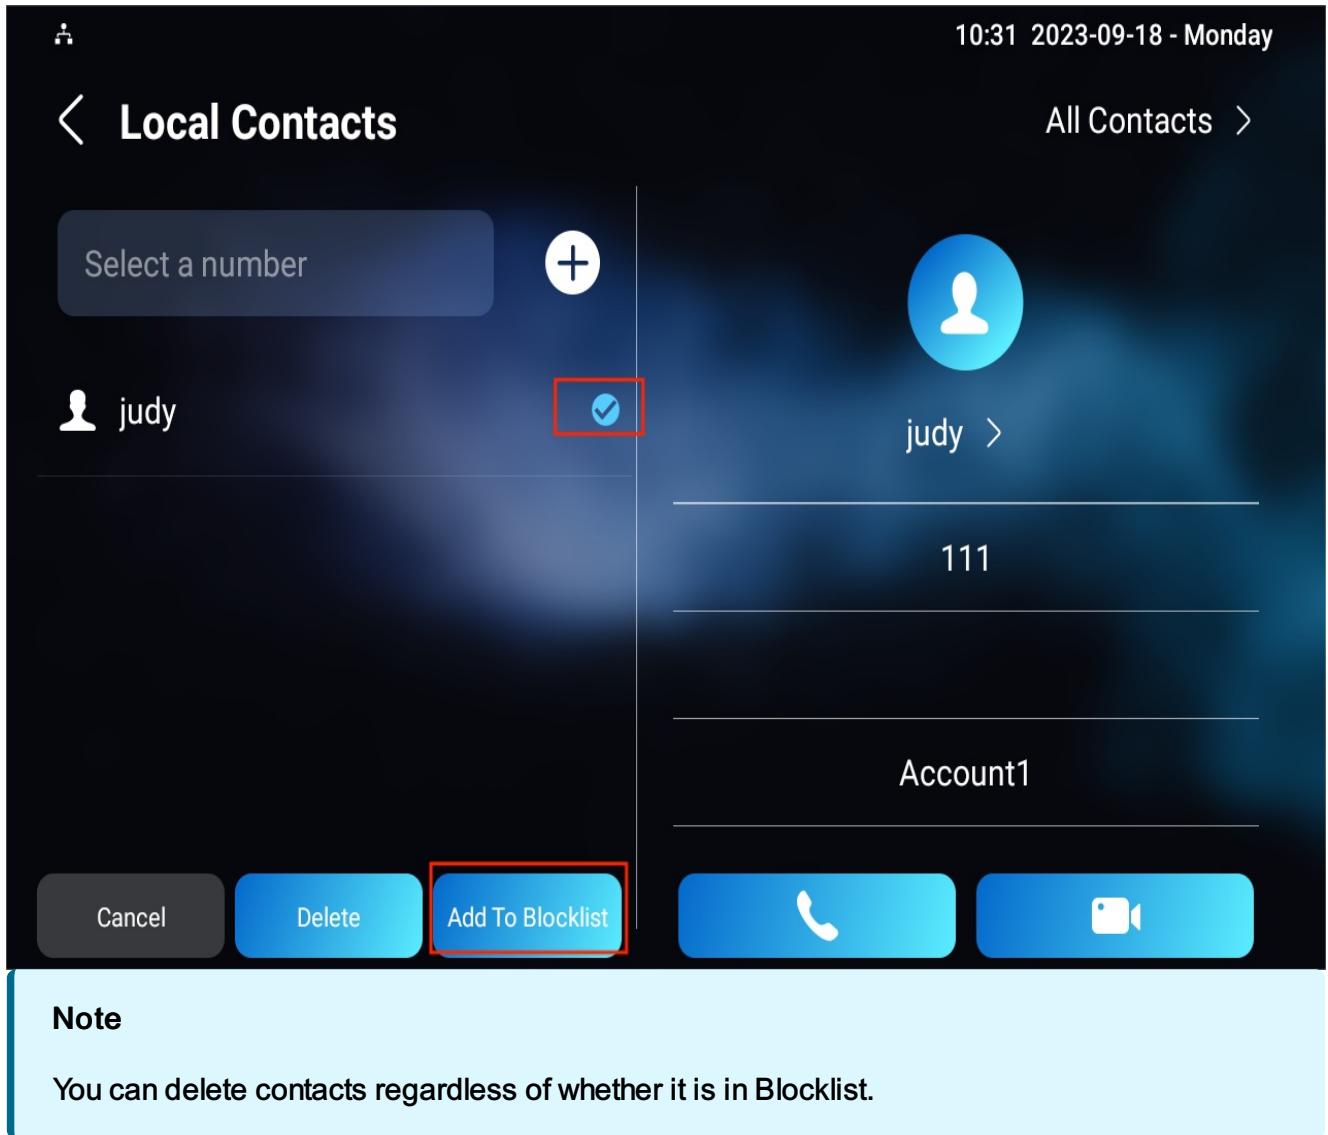

Block List Setting on the Device

Choose which contact on the contact list you want to be added to the block list. Incoming calls from the contacts in the blocklist will be rejected.

Press the **Edit** icon and then **Add to Blocklist**.

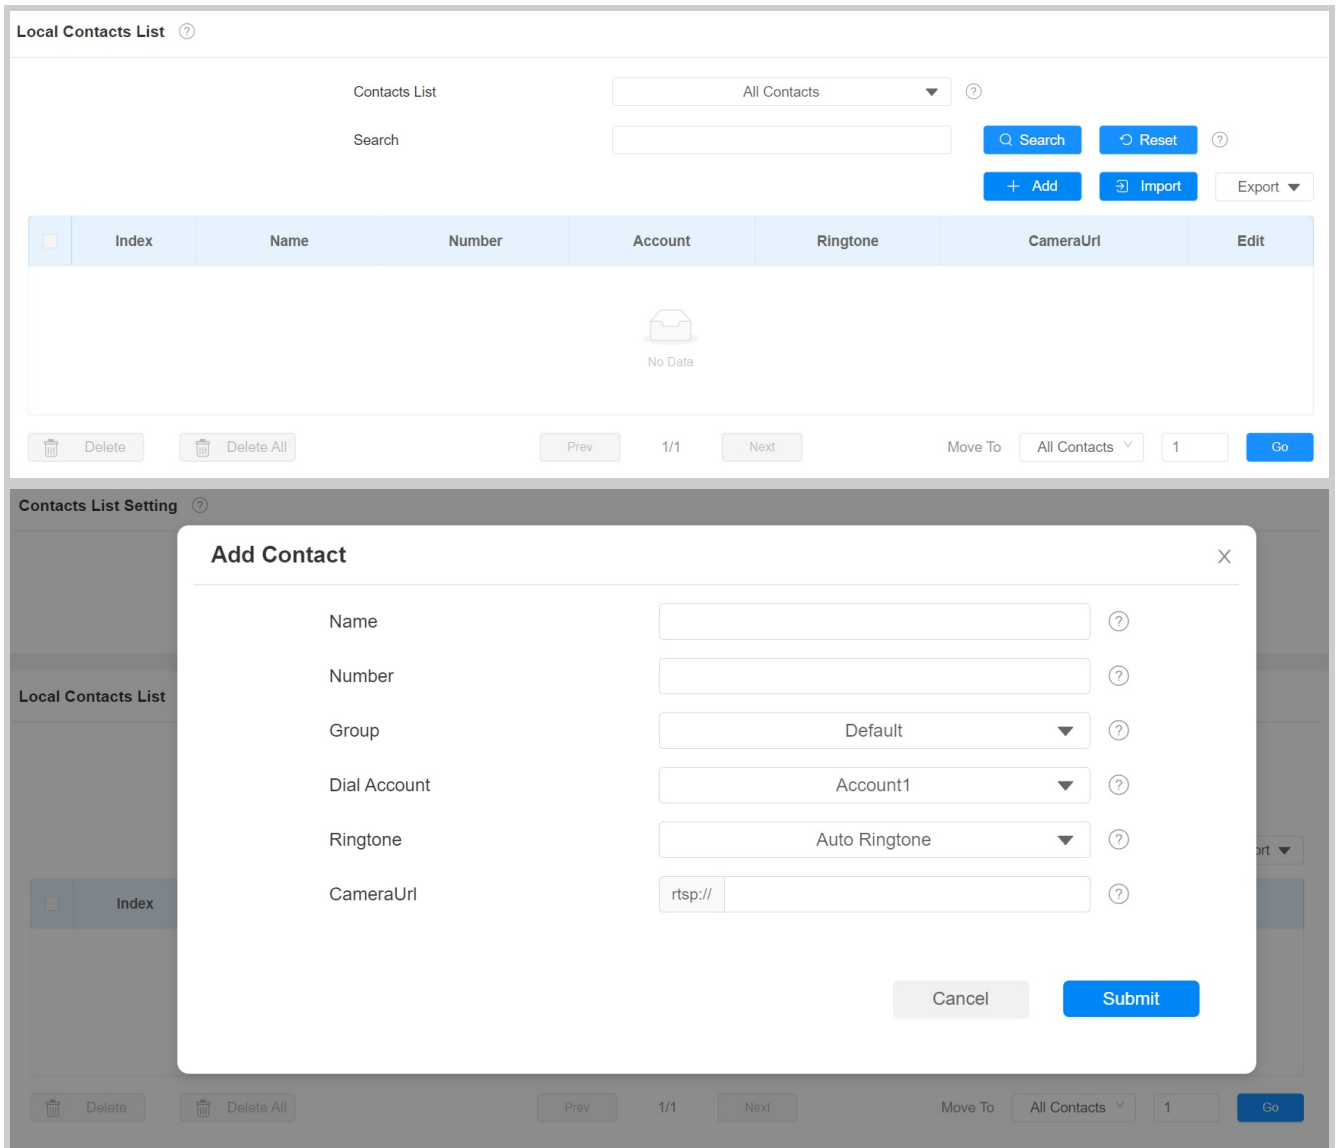

Contacts Configuration on the Web Interface

Add Local Contacts

You can add, edit, and search local contacts on the device's web interface. To add contacts, go to **Contacts > Local Contacts > Local Contacts List** interface, then click **+Add**.

- **Contacts List: All Contacts** displays all the contacts in the contact list. **Blocklist** displays the contacts in the blocklist.
- **Search:** Search a contact by its name or number.
- **Name:** The contact's name to distinguish it from others.
- **Number:** The SIP or IP number of the contact.
- **Group:** Calls from contacts in **Blocklist** will be rejected.
- **Dial Account:** The account to make the call, Account 1 or Account 2.
- **Ringtone:** The ringtone for the incoming call from the contact.
- **CameraUrl:** The RTSP URL for video preview.

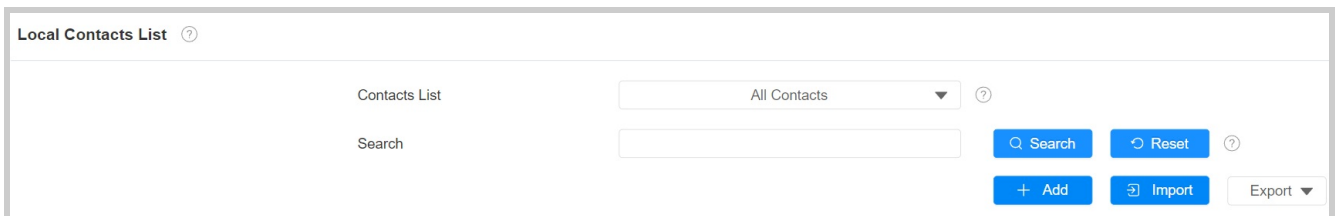

Note

If you want to remove the contact from the blocklist on the web interface, you can change the group to Default when editing the contact.

Import and Export Contacts

You can import and export contacts in batch. The file should be in .xml or .csv format.

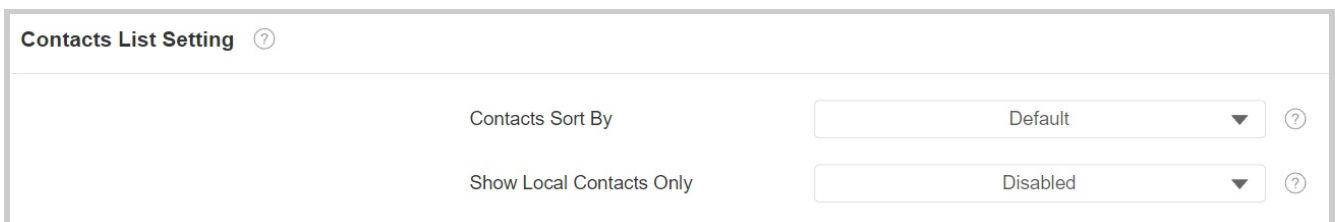

To import or export contacts, go to **Contacts > Local Contacts > Local Contacts List** interface.

The screenshot shows the 'Local Contacts List' interface. It features a header with the title 'Local Contacts List' and a help icon. Below the header, there is a 'Contacts List' section with a dropdown menu currently set to 'All Contacts'. A search bar is located below the dropdown. To the right of the search bar are three buttons: 'Search', 'Reset', and 'Add'. Below these are two more buttons: 'Import' and 'Export'. The 'Export' button has a dropdown arrow.

Contact List Display Configuration

To conduct the contact display, go to the web **Contacts > Local Contacts > Contacts List Setting** interface.

The screenshot shows the 'Contacts List Setting' interface. It features a header with the title 'Contacts List Setting' and a help icon. Below the header, there are two configuration options, each with a dropdown menu and a help icon. The first option is 'Contacts Sort By' with a dropdown set to 'Default'. The second option is 'Show Local Contacts Only' with a dropdown set to 'Disabled'.

- **Contacts Sort By:**
 - **Default:** The local contacts will be displayed before those from SmartPlus, SDMC, etc.
 - **ASCII Code:** The contacts will be displayed in order based on the first letter of the contact names.
 - **Created Time:** The contacts will be displayed by their created time.
- **Show Local Contacts Only:** If enabled, only the local contacts will be displayed. If disabled, all the contacts from SmartPlus Cloud, SDMC, and so on will be displayed.

Intercom Call Configuration

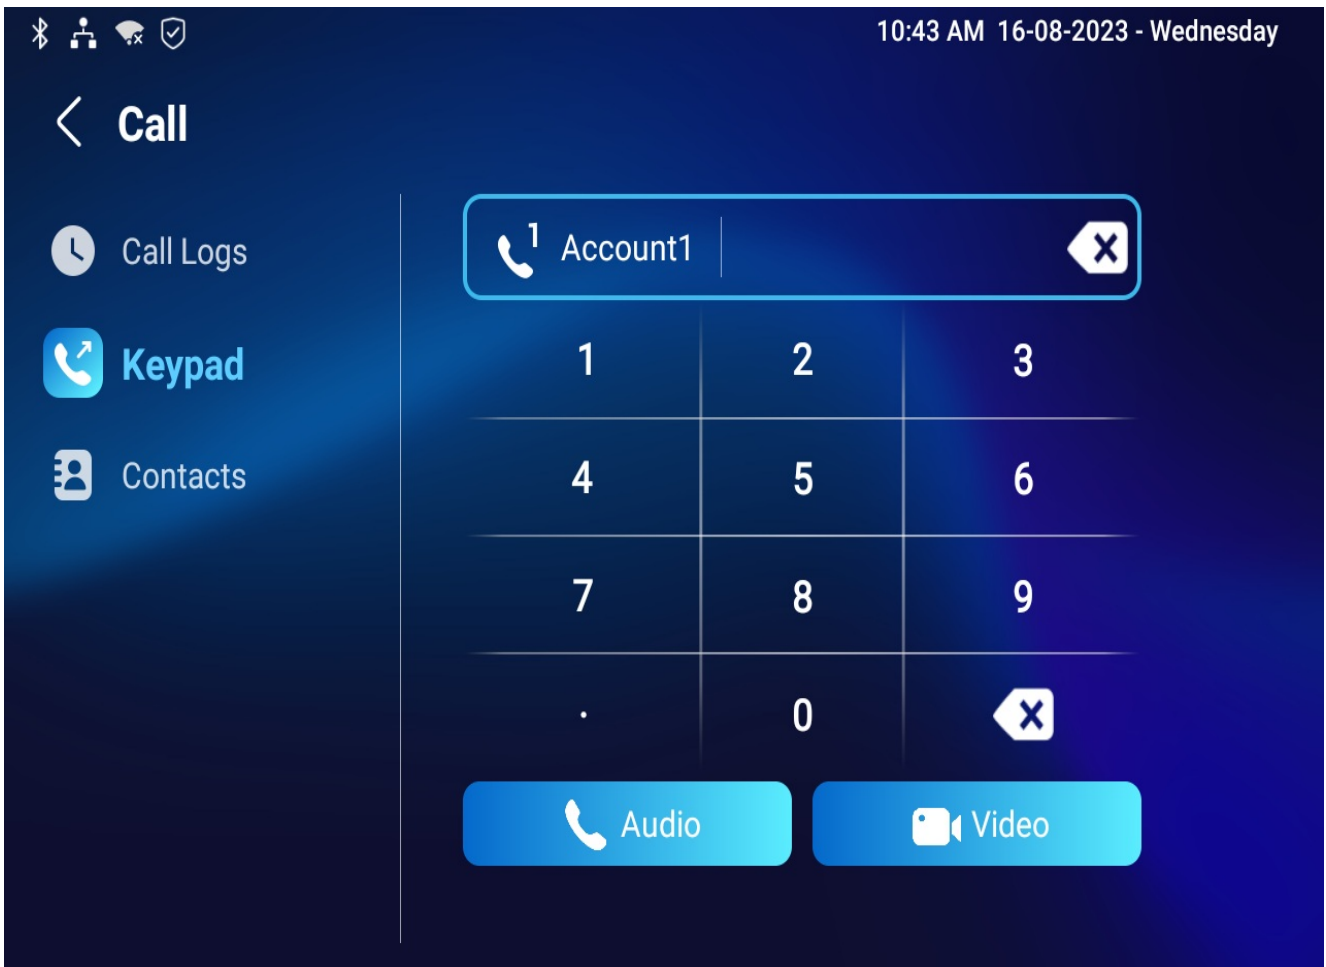

IP Call & IP Call Configuration

An IP call is a direct call between two intercom devices using their IP addresses, without a server or a PBX. IP calls work when the devices are on the same network.

Make IP Calls

Make a direct IP call on the device **Call > Keypad** screen.

Enter the IP address on the soft keyboard, select the account to make the call, and press the **Audio** or **Video** tab to call out.

In addition, you can also make IP calls on the **Contacts > Local Contacts** screen.

IP Call Configuration

To configure the IP call feature and port, go to the web **Device > Call Feature > Others** interface.

Others ?

Return Code When Refuse	486(Busy Here)	?
Auto Answer Delay	0	(0~30s) ?
Answer Mode	Video	?
Answer Tone	Enabled	?
Busy Tone	<input checked="" type="checkbox"/>	?
Indoor Auto Answer	<input type="checkbox"/>	?
Auto Hang Up	<input type="checkbox"/>	?
Direct IP Call	<input checked="" type="checkbox"/>	?
Direct IP Call Port	5060	(1-65535) ?
Local Relay1 Trigger By Incoming	Enabled	?
Local Relay2 Trigger By Incoming	Enabled	?

- **Direct IP Call:** If you do not allow direct IP calls to be made on the device, you can untick the check box to terminate the function.
- **Direct IP Call Port:** Set the port for direct IP calls. The default is 5060, with a range from 1-65535. If you enter a value within this range other than 5060, ensure consistency with the corresponding device for data transmission.

SIP Call & SIP Call Configuration

Session Initiation Protocol(SIP) is a signaling transmission protocol used for initiating, maintaining, and terminating calls.

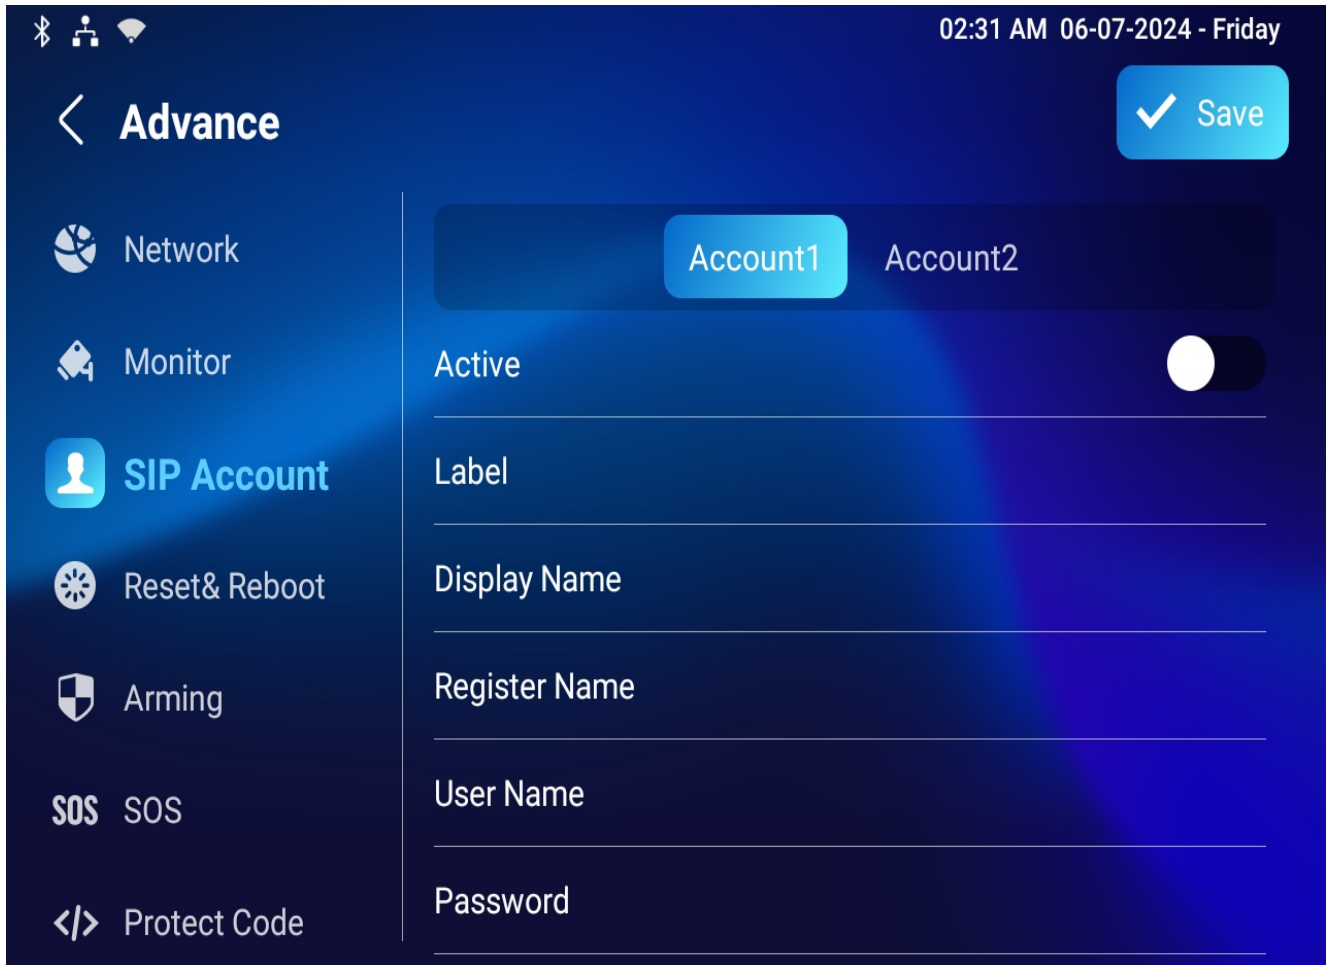

A SIP call uses SIP to send and receive data between SIP devices, and can use the internet or a local network to offer high-quality and secure communication. Initiating a SIP call requires a SIP account, a SIP address for each device, and configuring SIP settings on the devices.

SIP Account Registration

Each device needs a SIP account to make and receive SIP calls.

Akuvox intercom devices support the configuration of two SIP accounts, which can be registered under two independent servers.

On the device screen, navigate to **Settings > Advance > SIP Account** screen.

- **Account 1/Account 2:** The device supports 2 SIP accounts.
 - Account 1 is the default account for call processing. Also, it will be utilized when the Akuvox SmartPlus Cloud service is activated.
 - The system switches to Account 2 if Account 1 is not registered.
- **Active:** Check to activate the registered SIP account.
- **Label:** The label of the device.
- **Display Name:** The designation for Account 1 or 2 to be shown on the device itself on the calling screen.
- **Register Name:** Same as the username from the PBX server.
- **User Name:** Same as the username from the PBX server for authentication.
- **Password:** Same as the password from the PBX server for authentication.

The SIP account registration can also be configured on the device web **Account > Basic > SIP Account** interface.

SIP Account ?

Status	Disabled	?
Account	Account1 ▼	?
Account Enabled	<input type="checkbox"/>	?
Display Label	<input type="text"/>	?
Display Name	<input type="text"/>	?
Register Name	<input type="text"/>	?
Username	<input type="text"/>	?
Password	?

- **Status:** Indicate whether the SIP account is registered or not.
- **Account:** Choose the account for configuration.
- **Display Label:** The label of the device.
- **Display Name:** The designation for Account 1 or 2 to be shown on the device itself on the calling screen.
- **Register Name:** Same as the username from the PBX server.
- **Username:** Same as the username from the PBX server for authentication.
- **Password:** Same as the password from the PBX server for authentication.

SIP Server Configuration

SIP servers enable devices to establish and manage call sessions with other intercom devices using the SIP protocol. They can be third-party servers or built-in PBX in Akuvox indoor monitor.

To set it up, go to **Settings > Advance > Account** screen or navigate to the web **Account > Basic > SIP Account** interface.

SIP Server ?		
Server Address	<input type="text"/>	?
Sip Server Port	<input type="text" value="5060"/>	(1024-65535) ?
Registration Period	<input type="text" value="1800"/>	(120-65535S) ?

- **Server Address** : Enter the server’s IP address or its domain name.
- **SIP Server Port**: Specify the SIP server port for data transmission.
- **Registration Period**: Define the time limit for SIP account registration. Automatic re-registration will initiate if the account registration fails within this specified period.

Outbound Proxy Server configuration

An outbound proxy server receives and forwards all requests the designated server. It is an optional configuration, but if set it up, all future SIP requests get sent there in the first instance.

To set it up, navigate to **Account > Basic > Outbound Proxy Server** interface.

Outbound Proxy Server ?

Outbound Enabled ?

Preferred Outbound Proxy Server ?

Preferred Outbound Proxy Sever Port (1024-65535) ?

Alternate Outbound Proxy Server ?

Alternate Outbound Proxy Sever Port (1024-65535) ?

- **Preferred Outbound Proxy Server:** Enter the SIP proxy IP address.
- **Preferred Outbound Proxy Server Port:** Set the port for establishing a call session via the outbound proxy server.
- **Alternate Outbound Proxy Server:** Enter the SIP proxy IP address to be used when the main proxy malfunctions.
- **Alternate Outbound Proxy Server Port:** Set the proxy port for establishing a call session via the backup outbound proxy server.

SIP Call DND & Return Code Configuration

The Do Not Disturb(DND) feature prevents unwanted incoming SIP calls, ensuring uninterrupted focus. It also allows you to set a code to be sent to the SIP server when rejecting a call.

To set it up, go to **Device > Call Feature > DND** interface.

DND ?

Whole Day ?

Schedule ?

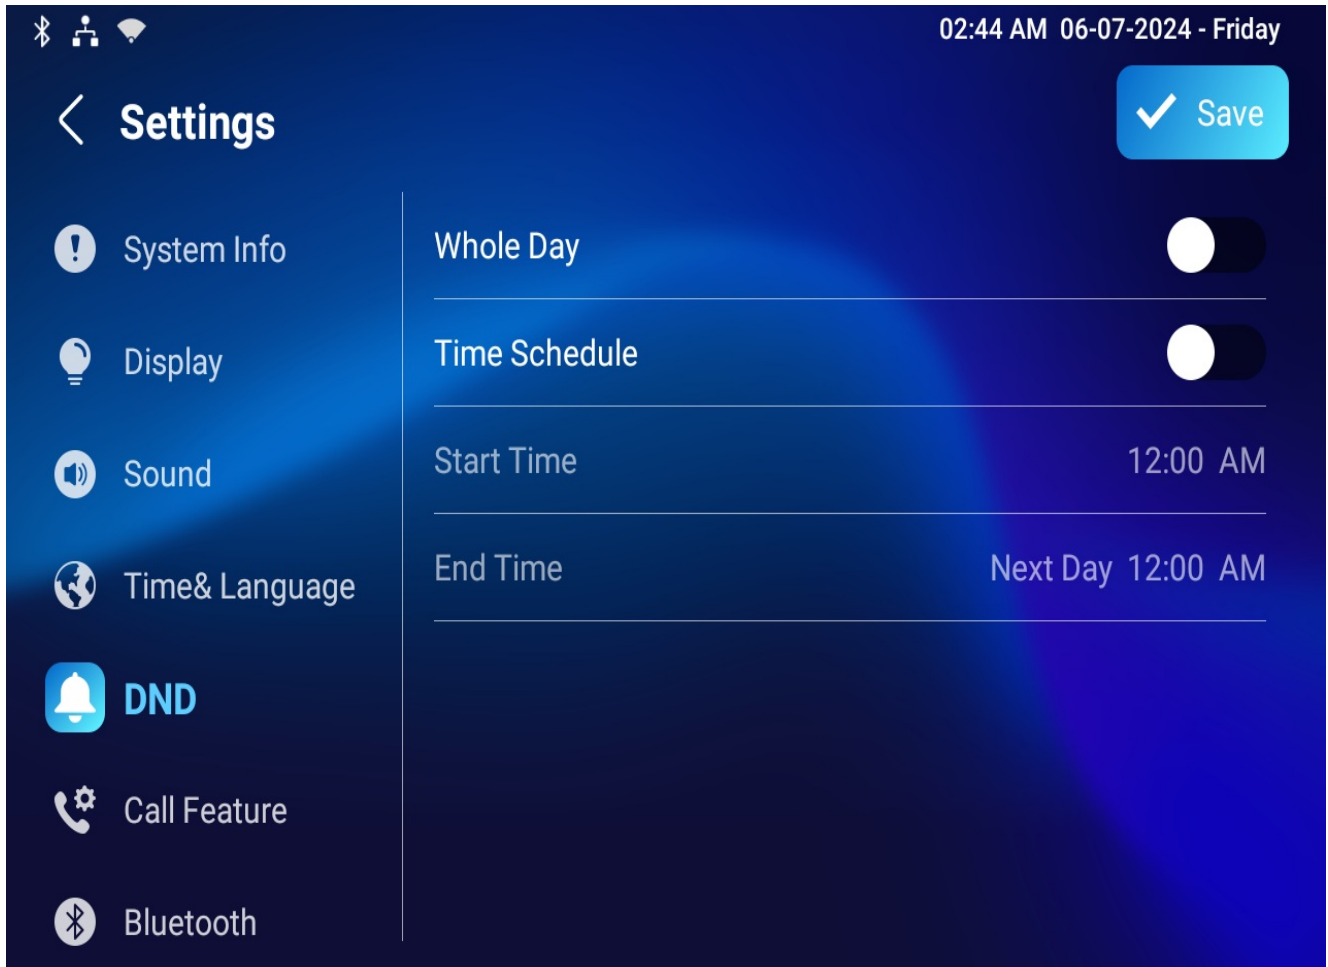

DND Start Time ?

DND End Time Next Day ?

Return Code When DND ?

- **DND:** Check **Whole Day** or **Schedule** to enable the DND function. The DND function is disabled by default.
- **Schedule:** Determine the DND period by selecting DND Start Time and DND End Time.
- **Return Code When DND:** Specify the code sent to the caller via the SIP server when rejecting an incoming call in DND mode.

You can also set up DND on the device. Tap **Settings > DND**.

Device Local RTP configuration

Real-time Transport Protocol(RTP) lets devices stream audio and video data over a network in real time.

To use RTP, devices need a range of ports. A port is like a channel for data on a network. By setting up RTP ports on your device and router, you can avoid network interference and improve audio and video quality.

To set it up, go to the web **Network > Advanced > Local RTP** interface.

Local RTP ?	
Starting RTP Port	<input type="text" value="11800"/> (1024-65535) ?
Max RTP Port	<input type="text" value="12000"/> (1024-65535) ?

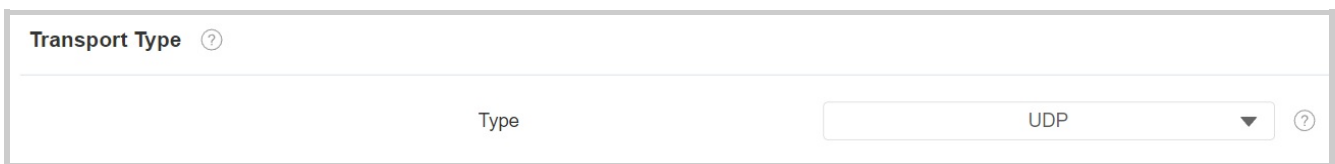

- **Starting RTP Port:** The port value to establish the start point for the exclusive data transmission range.

- **Max RTP port:** The port value to establish the endpoint for the exclusive data transmission range.

Data Transmission Type Configuration

Akuvox intercom devices support four data transmission protocols: **User Datagram Protocol(UDP)**, **Transmission Control Protocol(TCP)**, **Transport Layer Security(TLS)**, and **DNS-SRV**.

To set it up, go to the web **Account > Basic > Transport Type** interface.

Transport Type ?

Type ?

- **UDP:** An unreliable but very efficient transport layer protocol. It is the default transport protocol.
- **TCP:** A less efficient but reliable transport layer protocol.
- **TLS:** An encrypted and secured transport layer protocol. Select this option if you wish to encrypt the SIP messages for enhanced security or if the other party's server uses TLS. To use it, you need to upload certificates for authentication.
- **DNS-SRV:** A DNS service record defines the location of servers. This record includes the hostname and port number of the server, as well as the priority and weight values that determine the order and frequency of using the server.

SIP Hacking Protection

Internet phone eavesdropping is a network attack that allows unauthorized parties to intercept and access the content of the communication sessions between intercom users. This can expose sensitive and confidential information to the attackers. SIP hacking protection is a technique that secures SIP calls from being compromised on the Internet.

To set it up, go to the web **Account > Advanced > Call** interface.

Call ?

Max Local SIP Port	<input type="text" value="5062"/>	(1024~65535) ?
Min Local SIP Port	<input type="text" value="5062"/>	(1024~65535) ?
Auto Answer	<input type="checkbox"/>	?
Prevent SIP Hacking	<input type="checkbox"/>	?

- **Prevent SIP Hacking:** Activate this feature to only receive calls from contacts in the whitelist. This protects users' private and secret information from potential hackers during SIP calls.

Call Setting

Call Auto-answer Configuration

Auto-answer feature allows the device to automatically pick up incoming calls without any manual intervention. You can also customize this feature by setting the time duration for auto-answering and choosing the communication mode between audio and video.

To enable the auto-answer feature, go to the web **Account > Advanced > Call** interface.

The screenshot shows the 'Call' configuration page. It includes the following settings:

- Max Local SIP Port: 5062 (1024-65535)
- Min Local SIP Port: 5062 (1024-65535)
- Auto Answer:** (highlighted with a red box)
- Prevent SIP Hacking:

To set it up, go to the web **Device > Call Feature > Others** interface.

The screenshot shows the 'Others' configuration page. It includes the following settings:

- Return Code When Refuse: 486(Busy Here)
- Auto Answer Delay: 0 (0~30s)** (highlighted with a red box)
- Answer Mode: Video** (highlighted with a red box)
- Answer Tone: Enabled** (highlighted with a red box)
- Busy Tone:
- Indoor Auto Answer:** (highlighted with a red box)
- Auto Hang Up:
- Direct IP Call:
- Direct IP Call Port: 5060 (1-65535)
- Local Relay1 Trigger By Incoming: Enabled
- Local Relay2 Trigger By Incoming: Enabled

- **Auto Answer Delay:** Set the time interval for the call to be automatically picked up after ringing. For example, if you set the delay time to 5 seconds, the device will answer the call automatically after 5 seconds.
- **Answer Mode:** Determine whether to auto-answer the call as a video or audio call.

- **Answer Tone:** Select the tone for answering calls automatically.
- **Indoor Auto Answer:** Allow calls from other indoor monitors to be answered by the device automatically.

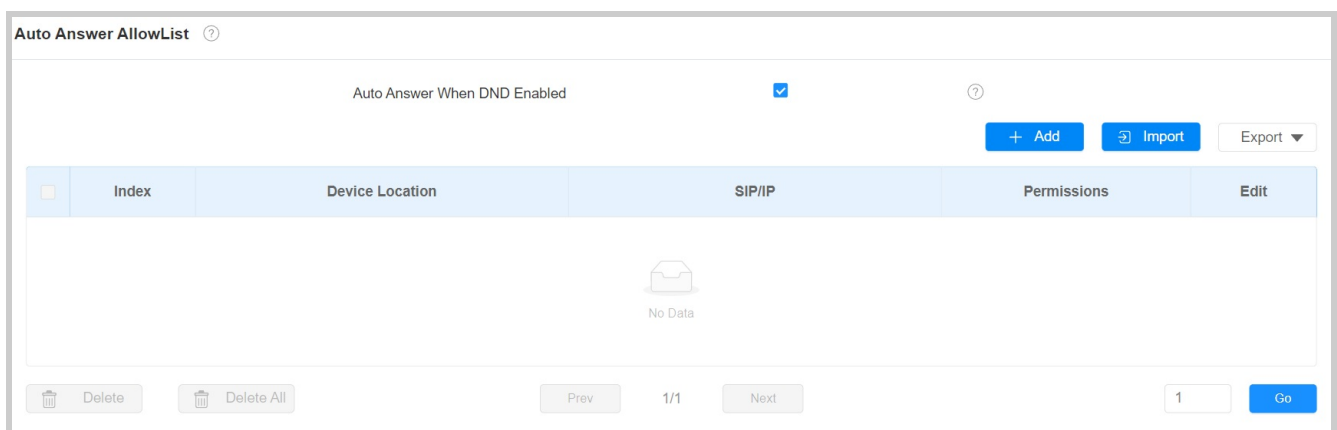

Other Options:

- **Return Code When Refuse:** Decide the code sent to the caller side via the SIP server when rejecting the incoming call.
- **Busy Tone:** Decide whether to sound a busy tone when a call is hung up by the callee.
- **Auto Hang Up:** Set whether to hang up the incoming calls automatically.
- **Local Relay1/2 Trigger By Incoming:** Set whether to trigger the local relay by incoming calls.

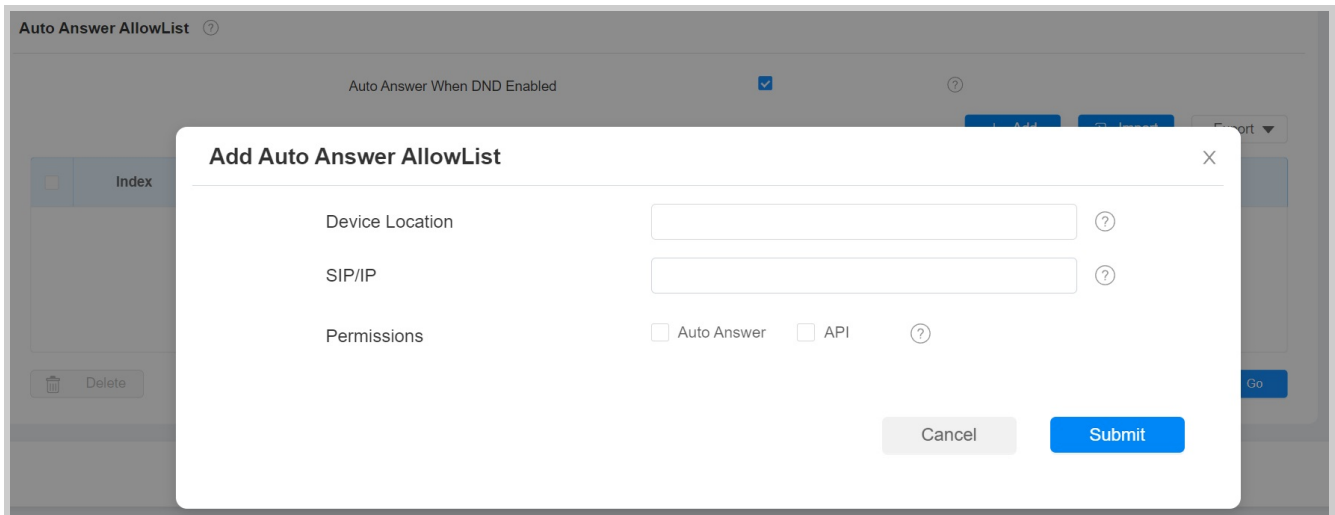

Auto-answer Allow List setting

Auto-answer can only be applicable to the SIP or IP numbers that are already added in the auto-answer allow list of your indoor monitor. Therefore, you are required to configure or edit the numbers in the allow list on the web interface.

To set it up, go to the **Security > Allowlist** interface. Click **+Add** to add the allowed device.

- **Auto Answer When DND Enabled:** Indicate that the auto-answer feature is effective when DND is turned on.

- **Device Location:** Specify the allowed device’s name or location.
- **SIP/IP:** Enter the allowed device’s SIP or IP number.
- **Permissions:**
 - **Auto Answer:** The call from the device will be answered automatically.
 - **API:** The device is allowed to access API.

Note

- SIP/IP number files to be imported or exported must be in either .xml or .csv format.
- SIP/IP numbers must be set up in the contact list of the indoor monitor before they can be valid for the auto-answer function.

Live Stream Setting

The Receive Live Stream function enables the indoor monitor to view the one-way video stream from the calling party, regardless of whether the call is audio or video. Meanwhile, the video feed from the indoor monitor is not transmitted to the calling device, protecting the privacy.

To set it up, go to the web **Device > Call Feature > Audio Call Setting** interface.

When it is enabled, calling parties cannot see users when they want to have a two-way video call with users. See the details below:

- If an incoming call is received on an audio basis on the device, the user can still see the video image of the calling party, while the calling party cannot see the user's. Thus, it protects the user's privacy.
- If an incoming call is received on a video basis on the device, the user and the calling party can see each other in the two-way video call.

Intercom Active, Mute, and Preview

To see the image at the door station before answering the incoming call, you can enable the intercom preview function on web **Device > Intercom > Intercom** interface.

Intercom ?	
Intercom Active	<input checked="" type="checkbox"/> ?
Intercom Mute	<input type="checkbox"/> ?
Intercom Preview	<input type="checkbox"/> ?

- **Intercom Active** : It is enabled by default.
- **Intercom Mute**: Mute the voice from the callee side.
- **Intercom Preview**: Enable the incoming call preview. If it is enabled, the group call is not available.

Emergency Call Setting

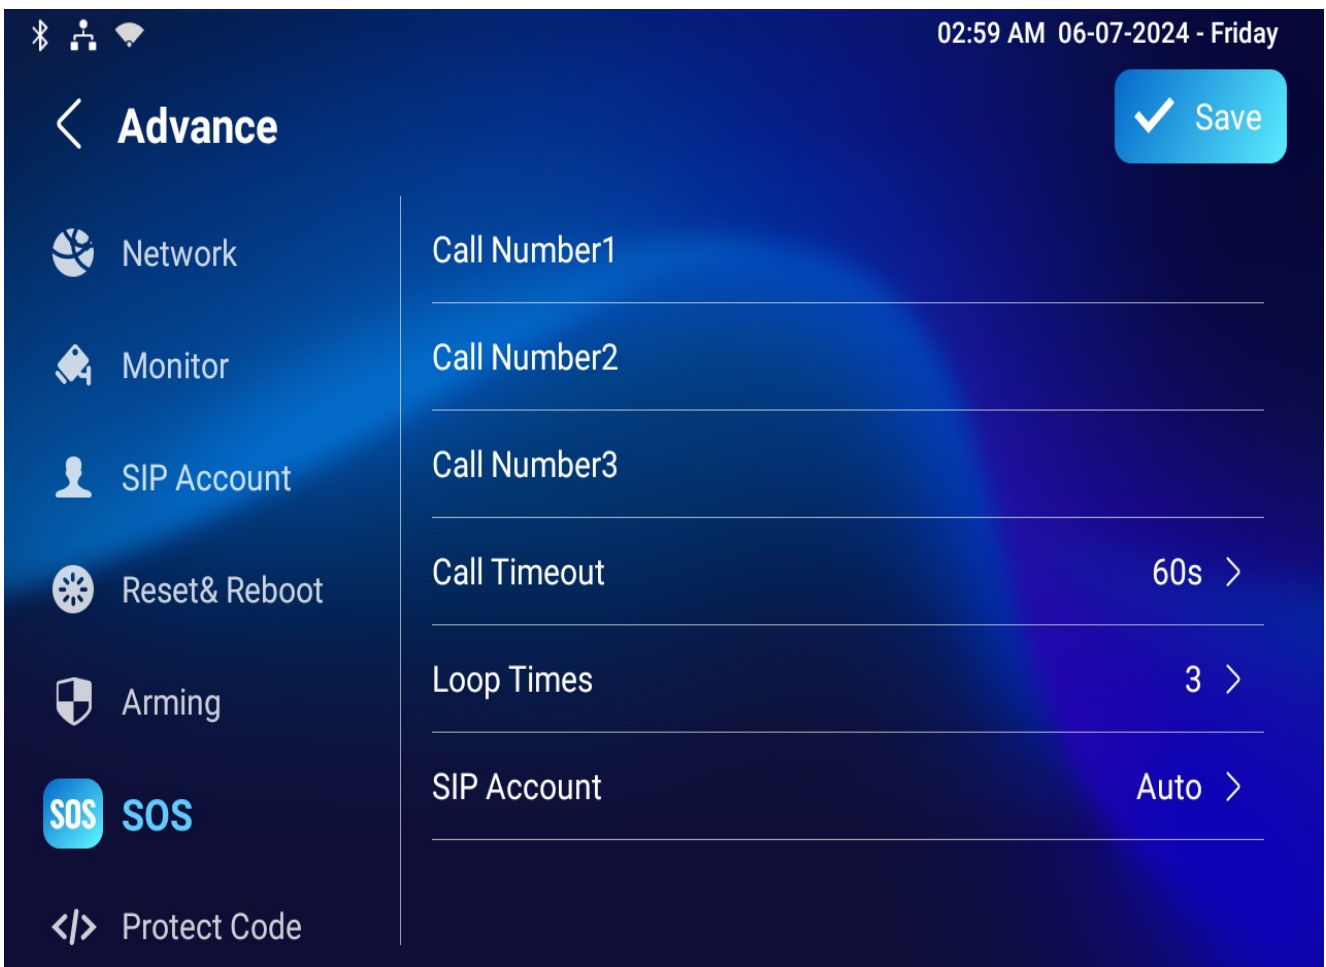

The Emergency Call function is designed for urgent situations, particularly beneficial for the elderly and children. Users can display the SOS button on the indoor monitor's screen. When the button is pressed, the device automatically calls the designated emergency contacts, ensuring quick help when needed.

To display the emergency call softkey, navigate to the web **Device > Display Setting > Home Page Display/More Page Display** interface.

Home Page Display ⓘ Example

Area	Type	Value	Label	Type(max size:100*100)
Area1	Call			Not selected any files Select File Delete
Area2	SOS		SOS	Not selected any files Select File Delete
Area3	DND			
Area4	Monitor			Not selected any files Select File Delete

You also need to set up specific parameters on the device or the device web interface. To set it up on the device, go to **Settings > Advance > SOS** screen.

- **Call Number:** 3 SOS numbers can be set up. Once users press the SOS key on the home page, indoor monitors will call out the numbers in order.
- **Call Timeout:** The call duration for each number. When users call out and the other side does not answer within the timeout, indoor monitors will continue to call the next number.
- **Loop Times:** Set up the call loop times.
- **SIP Account:** The account to make SOS calls.

To set it up on the web interface, go to **Device > Intercom > SOS** interface.

SOS ?

Account	Auto	?
Call Number 1		?
Call Number 2		?
Call Number 3		?
Call Timeout	60	?
Loop Times	3	?

Multicast Configuration

The Multicast function allows one-to-many broadcasting for different purposes. For example, it enables the indoor monitor to announce messages from the kitchen to other rooms, or to broadcast notifications from the management office to multiple locations. In these scenarios, indoor monitors can either listen to or send audio broadcasts.

To set it up, go to the web **Device > Multicast** interface.

Multicast List ?

Multicast Group	Multicast Address	Enabled
Multicast Group 1		<input type="checkbox"/>
Multicast Group 2		<input type="checkbox"/>
Multicast Group 3		<input type="checkbox"/>

Listen List ?

Listen Group	Listen Address	Label
Listen Group 1		
Listen Group 2		
Listen Group 3		

- **Multicast Address:** The multicast IP address is the same as the listen address.
- **Listen Address:** The listen address is the same as the multicast address.
- **Label:** The label name will be shown on the calling screen.

Note

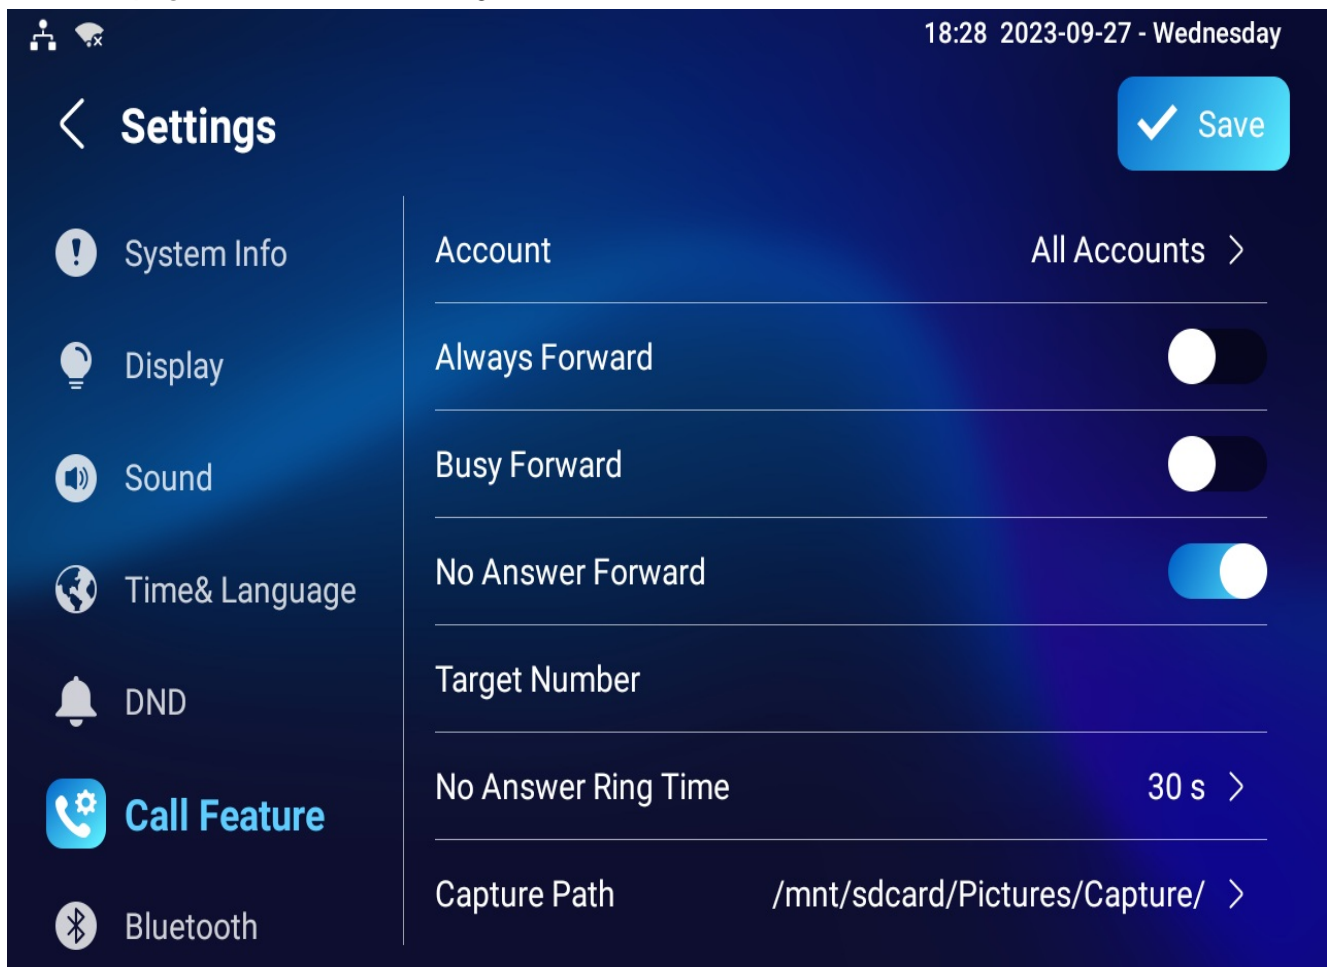

The multicast address entered should be within the specific range and not all multicast IP addresses are valid. Please consult Akuvox tech team for more information.

Call Forwarding Setting

Call Forward is a feature that allows for transferring incoming calls to another number. Users can set up call forwarding according to different situations, such as always forwarding calls, forwarding calls when the indoor monitor is busy, or when it doesn't pick up the call.

Call Forwarding Setting on the Device

To set it up, go to the device **Settings > Call Feature** screen.

- **Account:** The account to implement the call forwarding feature.
- **Always Forward:** All incoming calls will be automatically forwarded to a specific number.
- **Busy Forward:** Incoming calls will be forwarded to a specific number if the device is busy.

- **No Answer Forward:** Incoming calls will be forwarded to a specific number if the call is not picked up within no answer ring time.
- **Target Number:** Specify the forward number when Always Forward, Busy Forward, or No Answer Forward is enabled.
- **No Answer Ring Time(Sec):** The time ranges from 0-120 seconds. This option appears when No Answer Forward is enabled.
- **Capture Path:** The storage location for all the captured pictures.

Call Forwarding Setting on the Web Interface

Set up the forward function on the web **Device > Call Feature > Call Forward** interface.

The screenshot shows the 'Call Forward' configuration page. It features a table with six rows of settings. Each row has a label on the left, a value in a dropdown or text box in the middle, and a help icon on the right.

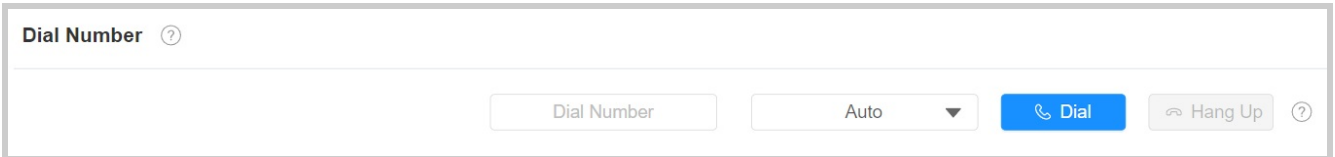

Setting	Value	Help
Account	All Accounts	?
Always Forward	Disabled	?
Busy Forward	Disabled	?
No Answer Forward	Enabled	?
Target Number		?
No Answer Ring Time	30	?

- **Always Forward:** All incoming calls will be automatically forwarded to a specific number.
- **Busy Forward:** Incoming calls will be forwarded to a specific number if the device is busy.
- **No Answer Forward:** Incoming calls will be forwarded to a specific number if the call is not picked up within no answer ring time.
- **Target Number:** The specific forward number when Always Forward, Busy Forward, or No Answer Forward is enabled.
- **No Answer Ring Time(Sec):** The time ranges from 0-120 seconds. This option appears when No Answer Forward is enabled.

Web Call

The web call feature allows for making calls via the device's web interface, commonly used for remote call testing purposes.

To set it up, navigate to the **Contacts > Local Contacts > Dial Number** interface. Enter the target number and select the account to dial out.

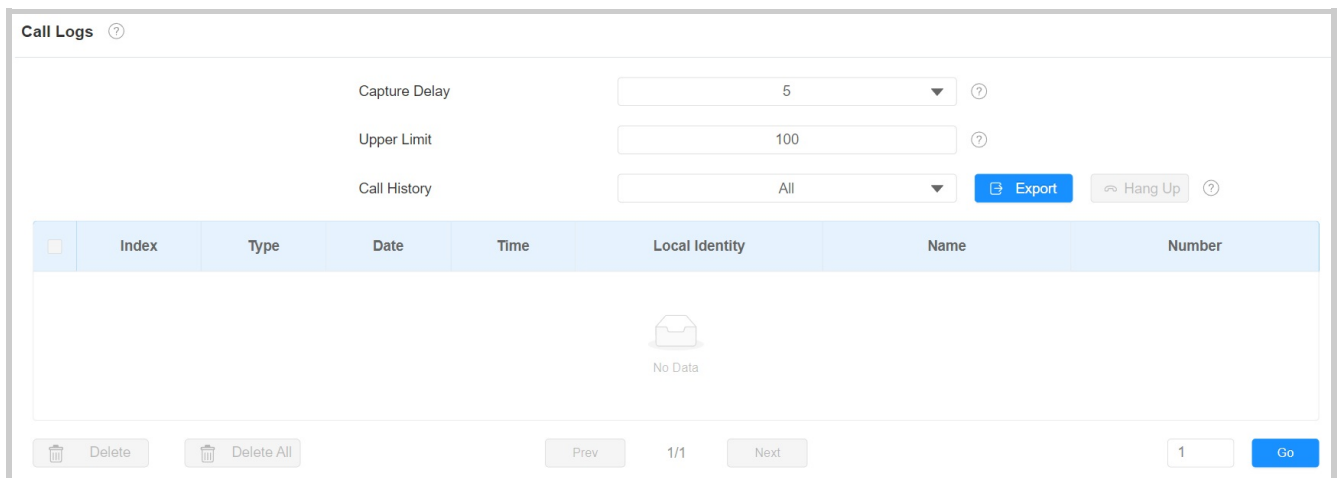

The screenshot shows a web interface titled "Dial Number" with a help icon. Below the title is a large, empty text input field. To the right of the input field are four controls: a "Dial Number" placeholder text, a dropdown menu currently set to "Auto", a blue button with a phone icon and the text "Dial", and a grey button with a phone icon and the text "Hang Up", followed by another help icon.

Call Log

If you want to check on the calls inclusive of the dial-out calls, received calls, and missed calls in a certain period, you can check and search the call log on the device web interface and export the call log from the device if needed.

To set it up, go to the **Contacts > Call Logs** interface.

The screenshot shows the 'Call Logs' interface. At the top, there are three filter settings: 'Capture Delay' set to 5, 'Upper Limit' set to 100, and 'Call History' set to 'All'. To the right of these filters are an 'Export' button and a 'Hang Up' button. Below the filters is a table with the following columns: Index, Type, Date, Time, Local Identity, Name, and Number. The table is currently empty, displaying a 'No Data' message with an envelope icon. At the bottom of the interface, there are buttons for 'Delete', 'Delete All', 'Prev', 'Next', a page indicator '1/1', and a 'Go' button.

- **Capture Delay:** Set the image capturing starting time when the device goes into a video preview.
- **Upper Limit:** The maximum screenshot storage capacity. When the capacity reaches its limit, the previous screenshots will be overwritten.
- **Call History:** There are five types of call history, All, Dialed, Received, Missed, and Forwarded.
- **Local Identity:** Display the device's SIP account or IP number that receives incoming calls.

To check call logs on the device, tap **Call > Call Logs**.

Intercom Message Setting

Manage Messages

You can check, create and clear messages as needed on the device **Messages** screen.

Tap **+Add** to create a message and tap **Clear** to delete messages.

- **Notification:** The message from the property manager. This feature is only available when using SDMC or Akuvox SmartPlus.
- **Text MSG:** To send, receive, or manage the text message here.
- **Owner MSG:** When nobody answers the incoming call within the pre-configured ring time, the visitor will hear the owner's audio message.
- **Visitor MSG:** When nobody answers the incoming call within the pre-set ring time, it will save the visitor record.

- **Family MSG:** Audio messages recorded for family members.

To configure ring time, press the **Settings** icon on the screen.

Audio & Video Codec Configuration for SIP Calls

Audio Codec Configuration

The device supports eight types of codecs for encoding and decoding the audio data during the call session. Each type of Codec varies in terms of sound quality. You can select the specific codec with different bandwidths and sample rates flexibly according to the actual network environment.

To set it up, go to the web **Account > Advanced** interface.

Please refer to the bandwidth consumption and sample rate for the codec types below:

Codec Type	Bandwidth Consumption	Sample Rate
PCMA	64 kbit/s	8kHz
PCMU	64 kbit/s	8kHz
G729	8 kbit/s	8kHz
G722	64 kbit/s	16kHz
iLBC_13_3	8,16 kbit/s	13.3kHz
iLBC_15_2	8,16 kbit/s	15.2kHz
L16	128 kbit/s	variable
OPUS	154.4 kbit/s	48kHz

Video Codec Configuration

S567 series supports VP8, H263, H264, and H265 codecs.

To set it up, go to the web **Account > Advanced > Video Codecs** interface. Choose an available video codec and set up the codec parameters.

Video Codecs ?

Payload	<input type="text" value="96"/>	?

- **Resolution:** The code resolution for the video quality has five options: QCIF, CIF, VGA, 4CIF, and 720P. H263 only has QCIF, CIF, 4CIF. Select the resolution according to the network environment.
- **Bitrate:** Select the video stream bitrate. The default value varies by the resolution.
- **Payload:** The payload ranges from 90-119 for the audio/video configuration file.

Access Control Configuration

Relay Switch Setting

Local Relay Setting

A local relay is an external unit that is physically nearby and directly connected to the intercom device. It allows the intercom system to trigger actions, such as unlocking a door, based on user input or authorization.

To set it up, go to the web **Device > Relay > Relay Setting** interface.

Relay Setting ?

Relay Type: ?

Relay Name: ?

Remote Control: ?

DTMF: ?

- **Hold Delay(Sec):** Determine how long the relay stays activated. For example, if set to 5 seconds, the relay remains to be opened for 5 seconds before closing.
- **Relay Type:**

- **Chime Bell Setting:** When there is a call and the relay is triggered, the chime bell will ring.
 - **Open Door:** When the unlock icon is pressed and the relay is triggered, the door will be opened.
 - **Other Switches(Reset By Event):** The relay will reset after the triggered event is dealt with.
- **Relay Name:** Assign a distinct name for identification purposes.
 - **Remote Control:** Enable it to trigger local relay by DTMF.
 - **DTMF:** The DTMF code to trigger the local relay.

Remote Relay Switch Setting

You can use the unlock tab during the call to open the door. And you are required to set up the same DTMF code in the door phone and indoor monitor.

To set it up, go to the web **Device > Relay > Relay Setting > Remote Relay** interface.

Local Relay2	
Mode	Monostable ?

DTMF2 Code	1 ?
DTMF3 Code	2 ?

- **DTMF Code:** Define the DTMF code within the range(0-9 and *,#) for the remote relay.

Web Relay Setting

A web relay has a built-in web server and can be controlled via the Internet or a local network. The device can use a web relay to either control a local relay, or a remote relay somewhere else on the network.

To set it up, go to the web **Device > Relay > Web Relay** interface.

Action ID 5	<input type="text"/>	<input type="text"/>	<input type="text"/>
Action ID 6	<input type="text"/>	<input type="text"/>	<input type="text"/>
Action ID 7	<input type="text"/>	<input type="text"/>	<input type="text"/>
Action ID 8	<input type="text"/>	<input type="text"/>	<input type="text"/>
Action ID 9	<input type="text"/>	<input type="text"/>	<input type="text"/>
Action ID 10	<input type="text"/>	<input type="text"/>	<input type="text"/>

- **IP Address**: The web relay IP address provided by the web relay manufacturer.
- **Username**: The user name provided by the web relay manufacturer.
- **Password**: The manufacturer-provided authentication key for the web relay. Authentication occurs via HTTP. Leaving the Password field blank indicates non-use of HTTP authentication. You can define the password using HTTP GET in the Web Relay Action field.
- **IP/SIP**: The relay extension information, which can be an IP address or SIP account of an intercom device such as an indoor monitor, so that the specific action command will be sent when unlock is performed on the intercom device. This setting is optional.
- **Web Relay Action**: Configure the actions to be performed by the web relay upon triggering. Enter the manufacturer-provided URLs for various actions.

Note

If the URL includes full HTTP content(e.g., `http://admin:admin@192.168.1.2/state.xml?relayState=2`), it doesn't rely on the IP address that you entered above. However, if the URL is simpler (e.g., `"state.xml?relayState=2"`), the relay uses the entered IP address.

Door Unlock Configuration

Door Unlock by DTMF Code

Dual-tone multi-frequency signaling(DTMF) is a way of sending signals over phone lines by using different voice-frequency bands. Users can use the DTMF function to unlock the door for visitors during a call by either typing the DTMF code on the soft keypad, or tapping the unlock tab with the DTMF code on the screen.

To set it up, go to **Device > Relay > Relay Setting** interface.

Relay Setting ?

Local Relay

Mode	Monostable	?
Hold Delay	3	?
Relay Type	Open Door	?
Relay Name	Local Relay1	?
Remote Control	Disabled	?
DTMF		?

Local Relay2

Mode	Monostable	?
Hold Delay	3	?
Relay Type	Open Door	?
Relay Name	Local Relay2	?
Remote Control	Disabled	?
DTMF		?

Remote Relay

DTMF1 Code	0	?
DTMF2 Code	1	?
DTMF3 Code	2	?

To configure the DTMF code transport format, navigate to the web **Account > Advanced > DTMF** interface.

DTMF ?

Type	RFC2833	?
DTMF Code Transport format	Disabled	?
Payload	101	(96-127) ?

- **Type:** Select from the provided options.

- **DTMF Code Transport Format:** There are four options, Disabled, DTMF, DTMF-Relay, and Telephone-Event. Configure it only when the third-party device that receives the DTMF code adopts the Info transport format. Info transfers the DTMF code via signaling while other transport format does it via RTP audio packet transmission. Select the DTMF transferring format according to the third-party device.
- **Payload:** It is for data transmission identification ranging from 96-127.

Note

To open the door with DTMF, the intercom devices that send and receive the unlock command must use the same mode and code. Otherwise, the DTMF unlock may fail. See [here](#) for the detailed DTMF configuration steps.

Door Unlock via HTTP Command

The device supports remote door unlocking via an HTTP command. Simply enable this feature and input the HTTP command (URL) for the device. This will trigger the relay and open the door, even if the users are away from the device.

To set it up, go to the web **Device > Relay > Open Relay via HTTP** interface.

Switch	<input checked="" type="checkbox"/>	?
Username	<input type="text"/>	?
Password	<input type="password"/>	?
Remote Open Relay Via HTTP AllowList	<input checked="" type="checkbox"/>	?
1st IP	<input type="text"/>	
2st IP	<input type="text"/>	
3st IP	<input type="text"/>	
4st IP	<input type="text"/>	
5st IP	<input type="text"/>	

- **Username:** Set a username for authentication in HTTP command URLs.
- **Password:** Set a username for authentication in HTTP command URLs.

- **Remote Open Relay Via HTTP AllowList:** Enable it and type in the IP address of the server that you allow to send the HTTP command to the indoor monitor and trigger the local relay.

You can also set up HTTP commands to remotely control relays connected to door phones, go to the web **Device > Relay > Remote Relay By HTTP** interface.

Remote Relay By HTTP ⓘ

<input type="checkbox"/>	Index	IP/SIP	URL	Username	Password	Door Num
<input type="checkbox"/>	1	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	3	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	4	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	5	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	6	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	7	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	8	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x
<input type="checkbox"/>	9	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	1 x 2 x 3 x 4 x

Delete
Delete All

- **IP/SIP:** Specify the IP or SIP number of the door phone.
- **URL:** Enter the HTTP URL.
- **Username:** Enter the username the same as that is configured on the door phone's web interface.
- **Password:** Enter the password the same as that is configured on the door phone's web interface.

Note

Here is an HTTP command URL example for relay triggering.

```

http://192.168.35.127/fcgi/do?action=OpenDoor&UserName=admin&Password=12345&DoorNum=1

```

ID of Relay to be triggered

Note

The HTTP format for relay triggering varies depending on whether the device's high secure mode is enabled. Please refer to this how-to guide [Opening the Door via HTTP Command](#) for more information.

Door Unlock by the RF Key

The indoor monitor supports connecting to the Akuvox RF Key. Users can hold the pendant to open the door via the HTTP command remotely.

To set it up, go to the **Device > Relay > Long Press RF Key to Unlock on Idle** interface.

Long Press RF Key to Unlock on Idle ⓘ

Type Remote Relay HTTP1 ⓘ

- **Type:** Select from Remote Relay HTTP 1-10 which corresponds to the remote relays configured in the **Remote Relay By HTTP** section.

Tip

Please refer to [Match and Use a Pendant](#) for more information on using the RF Key.

Security

Monitor and Image

Monitor Setting

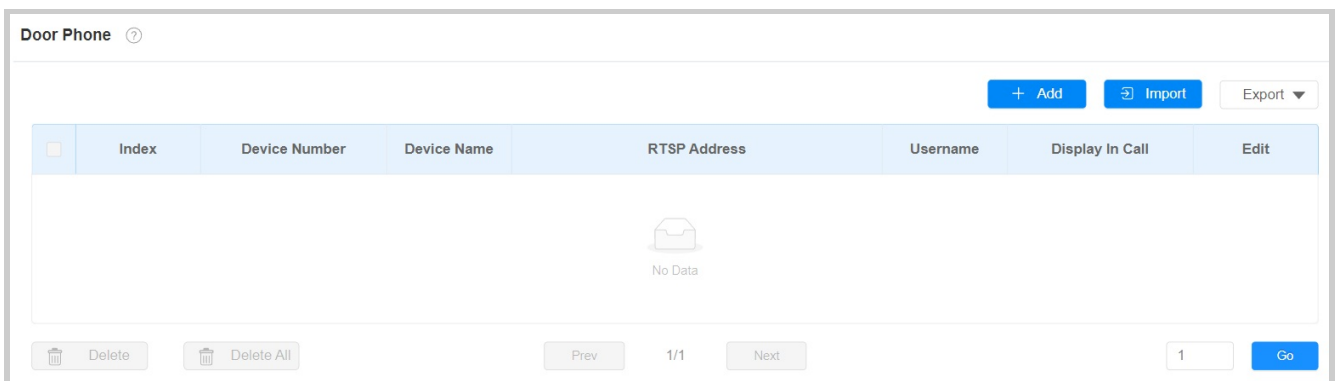

You can add up to four video streams using RTSP. If the Display in Call function is enabled, the video of the added monitor device will show up when it calls the indoor monitor.

To set it up, go to the **Device > Monitor** interface.

- **Monitor Display:**
 - **Multiple Window:** Display four video monitoring channels on the screen.
 - **Single Window:** Display only one video monitoring channel.

On the **Device > Monitor > Door Phone** section, click **+Add** to add a monitor.

- **Device Number:** The device's SIP/IP number for identification.
- **Device Name:** The device name for identification.
- **RTSP Address:** The RTSP address of the monitoring device. RTSP format: rtsp://Device IP address/live/ch00_0.
- **Username:** The username of the monitoring device for authentication.
- **Password:** The password of the monitoring device for authentication.
- **Display In Call:** Enable it to display the monitoring video during a call.

Note

You can import and export the monitoring device settings via a template in .xml format.

You can also set it up on the device **Settings > Advance > Monitor** screen. Tap **+New** to add the monitor device.

< **Advance**

Video Image Capturing

The device lets users take a screenshot during a video call or while using the monitor if they notice anything unusual. To take a screenshot, simply tap the Capture button.

RTSP Authentication

With RTSP authentication, users can monitor the indoor monitor via RTSP audio stream. This feature can be applied to, for example, listen to the baby in the baby's room for safety.

To set it up, go to **Settings > Basic** interface.

RTSP Setting ?	
RTSP Audio Enable	Disabled ?
Authorization Type	Digest ?
Username	admin ?
Password ?

- **Authorization Type:** There are three options, **Basic**, **Digest**, and **None**. **None** will allow all authorization types for the RTSP audio stream.

- **Basic:** The username and password are joined in the form “username: password”, followed by the Base64 encoding before being sent to the server. The server then decrypts the string to retrieve the username and password for verification.
 - **Digest:** Use hashing instead of the easily reversible Base64 encoding. A token is used for verification.
- **Username:** Set the username for the authentication.
 - **Password:** Set the password for the authentication.

Alarm and Arming Configuration

The Arming function is designed to enhance home security by offering three modes with custom zone settings for connected sensors. When armed, the device will sound a siren and notify specific people if a sensor detects something unusual.

Configure Alarm and Arming on the Device

Set up Arming and Disarm Codes

To configure the arming and disarm codes, go to the **Arming > Arming/Disarm Code** screen. Change the current password and save it. The default is 0000.

10:42 21-12-2021 - Tuesday

Arming/Disarm Code

✓ Save

Please input current arming/disarm code:

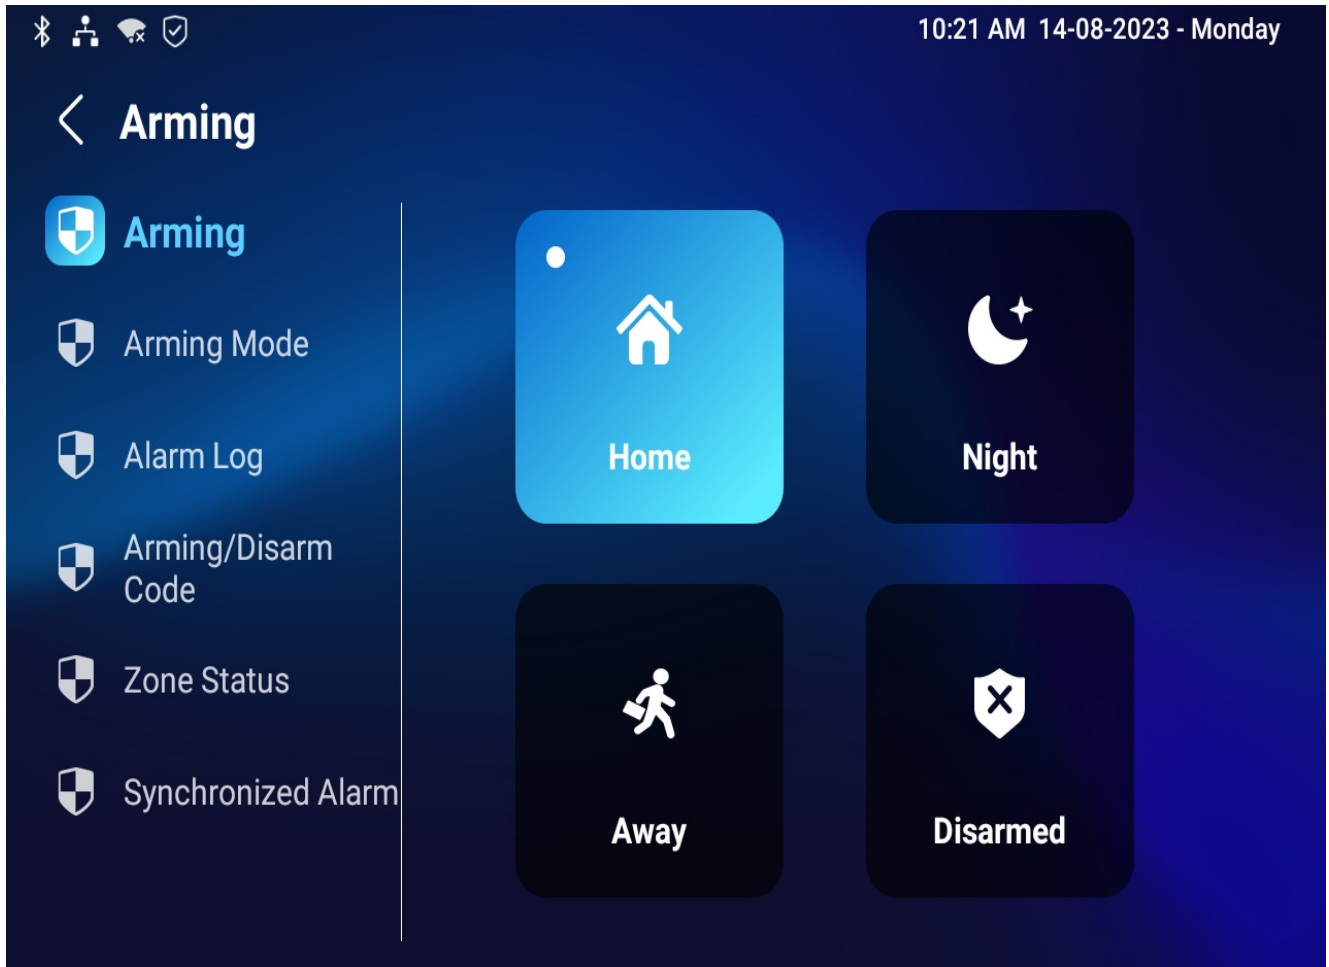

Please input new arming/disarm code:

Please confirm new arming/disarm code:

1	2	3
4	5	6
7	8	9
	0	

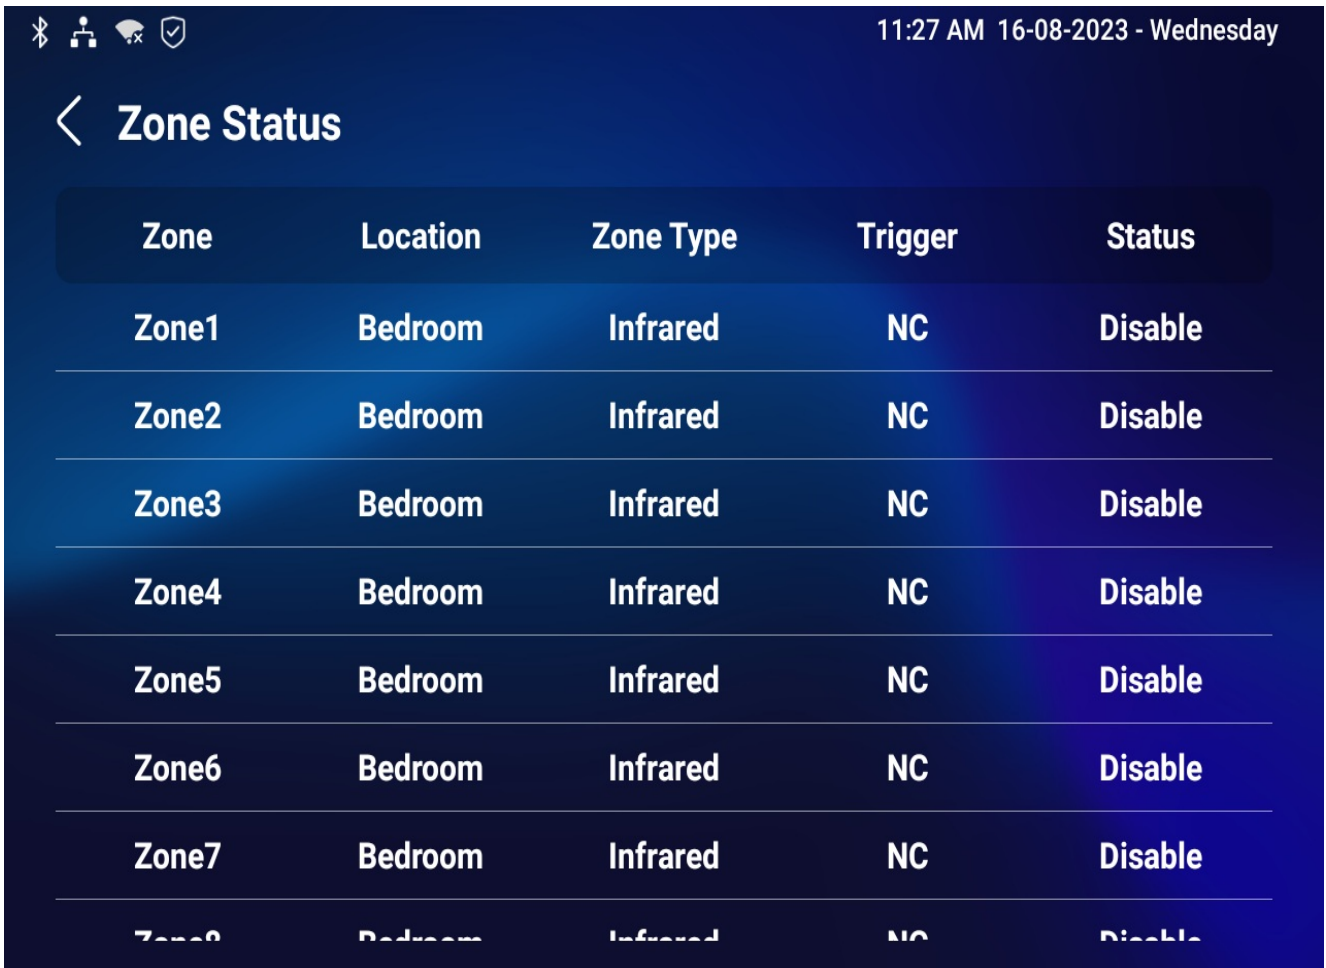

Select an Arming Mode

To select an arming mode, go to the **Arming** screen. Tap the desired mode to enable it.

Check Zone Status

Check the zone status on the **Arming > Zone Status** screen.

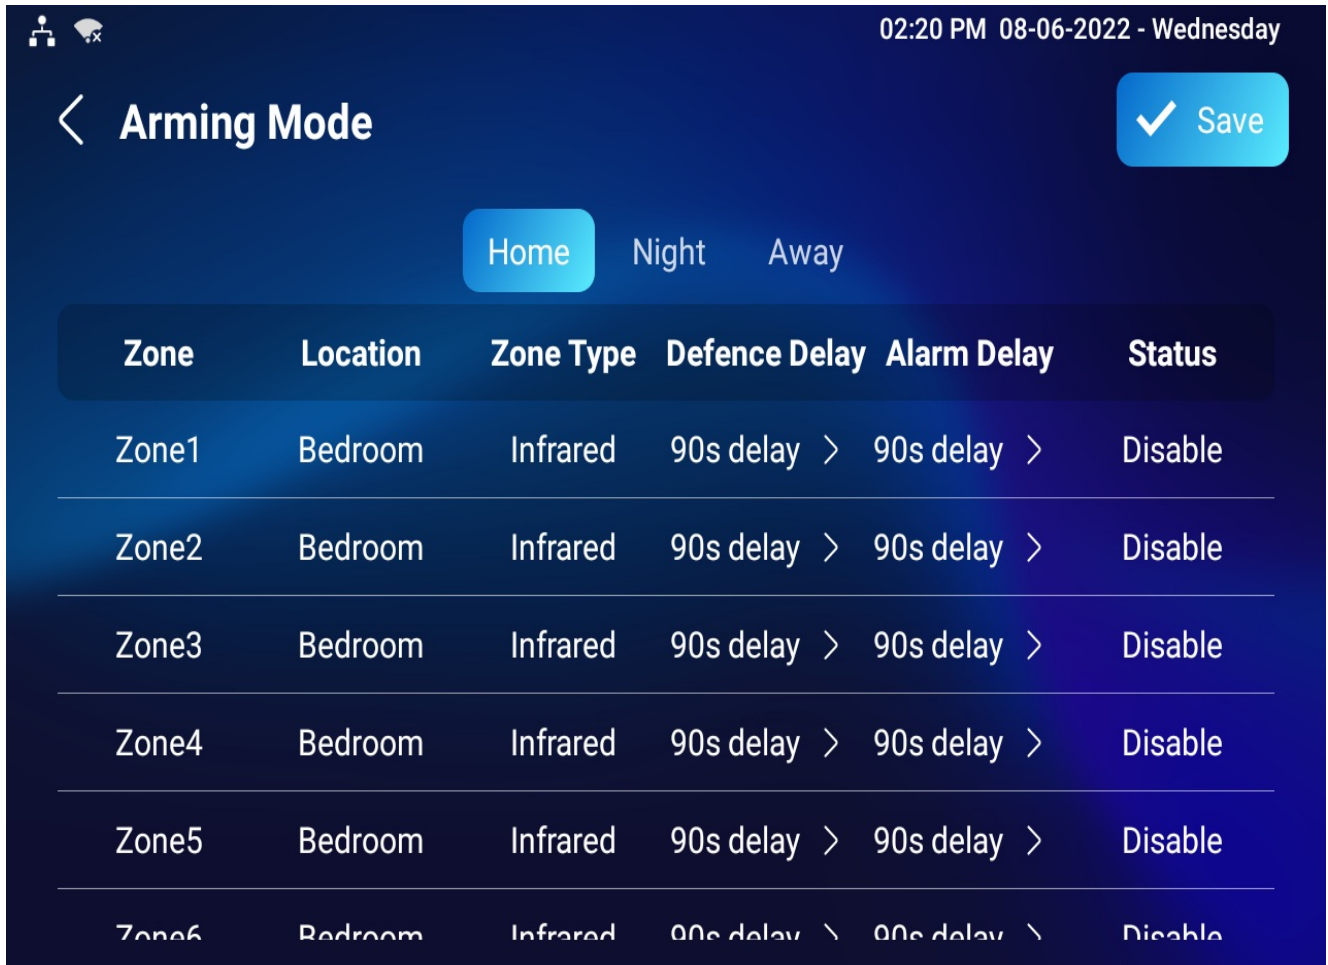

The screenshot shows the 'Zone Status' screen in the Akuvox app. The screen has a dark blue background. At the top, there is a status bar with icons for Bluetooth, Wi-Fi, and a shield, and the time '11:27 AM 16-08-2023 - Wednesday'. Below the status bar is a back arrow and the title 'Zone Status'. The main content is a table with the following data:

Zone	Location	Zone Type	Trigger	Status
Zone1	Bedroom	Infrared	NC	Disable
Zone2	Bedroom	Infrared	NC	Disable
Zone3	Bedroom	Infrared	NC	Disable
Zone4	Bedroom	Infrared	NC	Disable
Zone5	Bedroom	Infrared	NC	Disable
Zone6	Bedroom	Infrared	NC	Disable
Zone7	Bedroom	Infrared	NC	Disable
Zone8	Bedroom	Infrared	NC	Disable

Set up Alarm Sensors

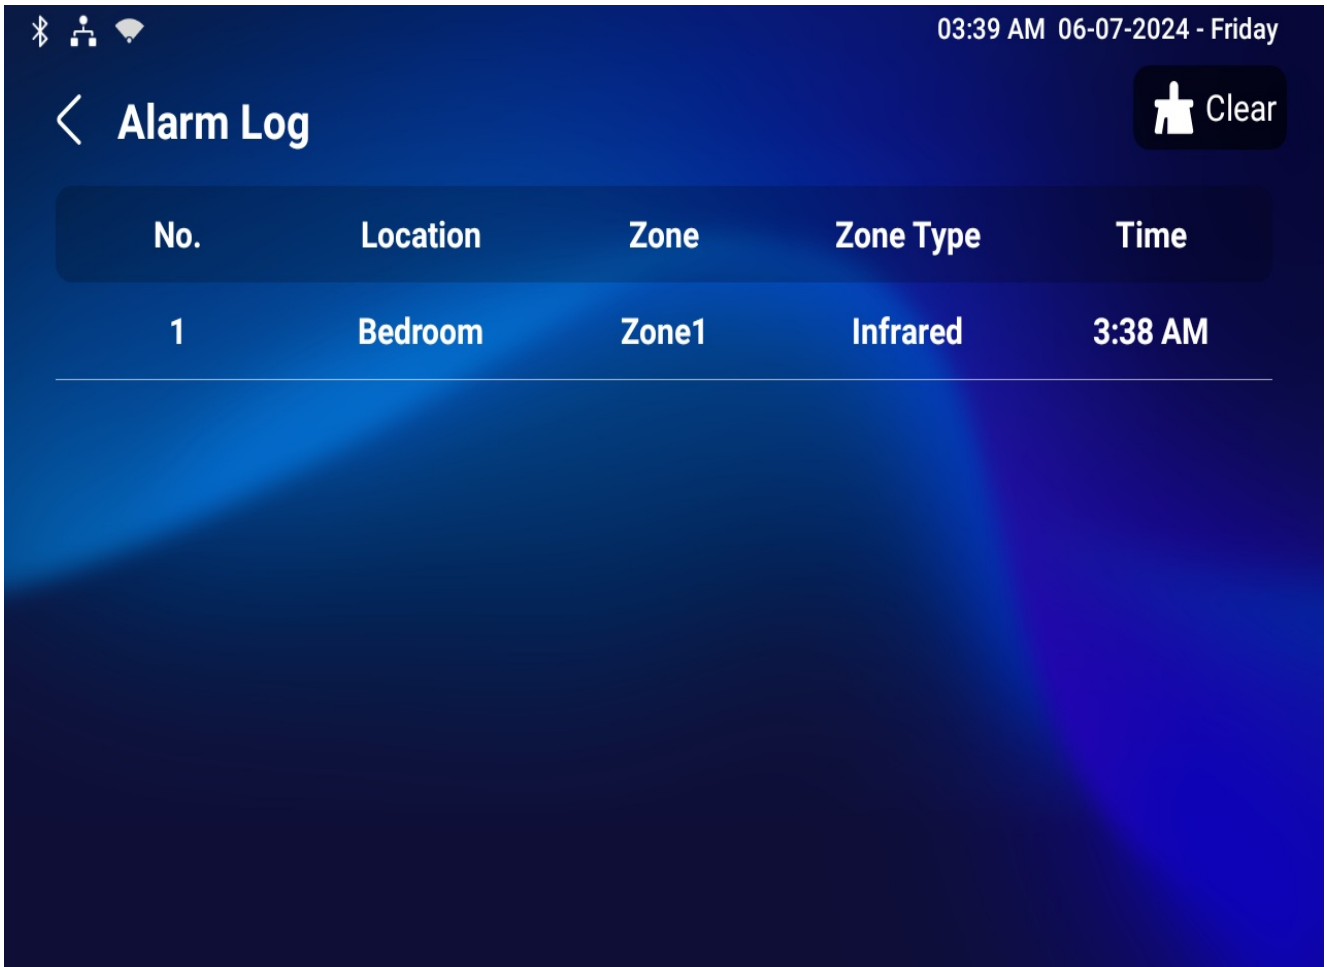

To configure the alarm sensor in different modes, go to the **Arming > Arming Mode** screen

- **Location:** Display which location the detection device is in, including Bedroom, Guest room, Hall, Window, Balcony, Kitchen, Study, and Bathroom.
- **Zone Type:** Display the alarm sensor type, including Infrared, Drmagnet, Smoke, Gas, and Urgency.
- **Defence Delay:** It means when users change the arming mode from other modes, there will be 90 seconds delay time to get activated.
- **Alarm Delay:** It means when the sensor is triggered, there will be 90 seconds delay time to announce the notification.
- **Status:** Enable or disable Arming Mode on the corresponding zone.

Check Alarm Logs

To check the alarm log, go to the **Arming > Alarm Log** screen.

Configure Alarm and Arming on the Web Interface

Set up Arming and Disarm Codes

To configure the arming and disarm codes, go to the **Arming > Disarm Code** interface. The default is 0000.

Disarm Code ?

Current Password	<input type="password"/>	?
New Password	<input type="password" value="length must be 1-10"/>	?
Confirm Password	<input type="password"/>	?

Disarm Setting ?

Disarm Interval (s)	<input type="text" value="Never"/> ▼	?
---------------------	---	---

- **Disarm Interval(Sec):** Set the alarm sound duration after the alarm is triggered.

Select an Arming Mode

To select an arming mode, go to the **Arming > Arming Mode** interface.

The screenshot shows the 'Arming Mode' interface. At the top, it says 'Arming Mode' with a help icon. Below that, there is a label 'Mode' and a dropdown menu currently set to 'Disarmed'.

Set up Location-based Alarm Sensors

To set up a location-based alarm sensor, go to the web **Arming > Zone Setting > Zone Setting** interface.

The screenshot shows the 'Zone Setting' interface with a table containing 8 zones. Each zone has a location, type, trigger mode, and status.

Zone	Location	Zone Type	Trigger Mode	Status
Zone1	Bedroom	Infrared	NC	Disabled
Zone2	Bedroom	Infrared	NC	Disabled
Zone3	Bedroom	Infrared	NC	Disabled
Zone4	Bedroom	Infrared	NC	Disabled
Zone5	Bedroom	Infrared	NC	Disabled
Zone6	Bedroom	Infrared	NC	Disabled
Zone7	Bedroom	Infrared	NC	Disabled
Zone8	Bedroom	Infrared	NC	Disabled

- **Location:** Indicate where the alarm sensor is installed. There are ten location types: Bedroom, Gate, Door, Guest room, Hall, Window, Balcony, Kitchen, Study, and Bathroom.
- **Zone Type:** The alarm sensor types. There are five sensor types: Infrared, Dmagnet, Smoke, Gas, and Urgency.
- **Trigger Mode:** Set sensor trigger mode between NC and NO.
- **Status:** Set the alarm sensor status among three options: Enabled, Disabled, and 24H.
 - **Enabled:** The alarm needs to be set again after disarming.
 - **Disabled:** Disarm the alarm.
 - **24H:** The alarm sensor will stay enabled for 24 hours without setting up the alarm manually again after the alarm is disarmed.

If any of the zones is enabled or set to 24H, the alarm-related icons will be displayed on the home screen for quick access.

Set up Alarm Sensors in Different Arming Modes

To configure the alarm in different modes, go to the **Arming > Arming Mode** interface.

Zone	Location	Zone Type	Defence Delay	Alarm Delay	Status
Zone1	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone2	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone3	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone4	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone5	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone6	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone7	Bedroom	Infrared	90s	90s	<input type="checkbox"/>
Zone8	Bedroom	Infrared	90s	90s	<input type="checkbox"/>

- **Location:** Display which location the detection device is in, including Bedroom, Guest room, Hall, Window, Balcony, Kitchen, Study, and Bathroom.

- **Zone Type:** Display the alarm sensor type, including Infrared, Drmagnet, Smoke, Gas, and Urgency.
- **Defence Delay:** It means when users change the arming mode from other modes, there will be 90 seconds delay time to get activated.
- **Alarm Delay:** It means when the sensor is triggered, there will be 90 seconds delay time to announce the notification.
- **Status:** Enable or disable Arming Mode on the corresponding zone.

Configure Alarm Text

Once the alarm sensor is configured, you can access the device's web interface to personalize the alert content displayed on the screen when an alarm is triggered.

To set it up, navigate to the web **Arming > Zone Setting > Customized Alarm** interface.

Zone	Alarm Content
Zone1	Alarm was Triggered
Zone2	Alarm was Triggered
Zone3	Alarm was Triggered
Zone4	Alarm was Triggered
Zone5	Alarm was Triggered
Zone6	Alarm was Triggered
Zone7	Alarm was Triggered
Zone8	Alarm was Triggered

- **Alarm Content:** The alarm text will be displayed on the device screen when an arming is triggered.

Configure Alarm Ringtone

You can upload a customized alarm ringtone by choosing the local audio file on the web **Device > Audio > Alarm Ringtone Upload** interface.

Alarm Ringtone Upload ?

Alarm Ringtone Upload ?

Alarm Ringtone ?

Note

The file format of customized ringtone should be in WAV or MP3 format. No limitation to the file size.

Alarm Action Configuration

When the alarm sensor is triggered, it can start different actions, such as HTTP commands, SIP messages, and calls.

To select and set up actions, go to the web **Arming > Alarm Action** interface.

Configure Alarm Action via HTTP Command

To set up the HTTP Command action, you can click **Enable** in the **Send HTTP** field to enable the actions for the alarm sensor installed in different locations. Then enter the HTTP command provided by the manufacturer of the device on which the action is to be carried out.

Zone	Zone Type	Http Command	Send HTTP Enabled
Zone1	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone2	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone3	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone4	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone5	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone6	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone7	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>
Zone8	Infrared	http:// <input type="text"/>	Disabled <input type="button" value="v"/>

- **HTTP Command:** Enter the HTTP command provided by the third-party device manufacturer.
- **Send HTTP Enabled:** Enable it if you want the action to be implemented on a designated third-party device.

Configure Alarm Action via SIP Message

The device can send messages to a designated device when the alarm is triggered. To set this up, enter a SIP number or IP address along with the message content.

Receiver Of SIP Setting ?

SIP Account

Zone	SIP Message	Send Sip Message
Zone1	<input type="text"/>	Disabled ▼
Zone2	<input type="text"/>	Disabled ▼
Zone3	<input type="text"/>	Disabled ▼
Zone4	<input type="text"/>	Disabled ▼
Zone5	<input type="text"/>	Disabled ▼
Zone6	<input type="text"/>	Disabled ▼
Zone7	<input type="text"/>	Disabled ▼
Zone8	<input type="text"/>	Disabled ▼

- **SIP Account:** The SIP number to receive the message.
- **SIP Message:** The message sent to the designated SIP number when the alarm is triggered.

Configure Alarm Action via SIP Call

The device can send messages to a designated device when the alarm is triggered. To set this up, enter a SIP number or IP address along with the message content.

Call Setting ?

Call Number

Zone	Make Call Enable	Alarm Siren
Zone1	Disabled ▼	Enabled ▼
Zone2	Disabled ▼	Enabled ▼
Zone3	Disabled ▼	Enabled ▼
Zone4	Disabled ▼	Enabled ▼
Zone5	Disabled ▼	Enabled ▼
Zone6	Disabled ▼	Enabled ▼
Zone7	Disabled ▼	Enabled ▼
Zone8	Disabled ▼	Enabled ▼

- **Call Number:** The SIP number or IP number to receive the calls when the alarm is triggered.
- **Make Call Enable:** Enable it so that a call will be made to the designated SIP or IP number when the alarm is triggered.
- **Alarm Siren:** Enable it to trigger an alarm siren on the indoor monitor when the alarm is triggered.

Configure Alarm-Triggered Local Relay

You can select the local relay to be triggered by the alarm.

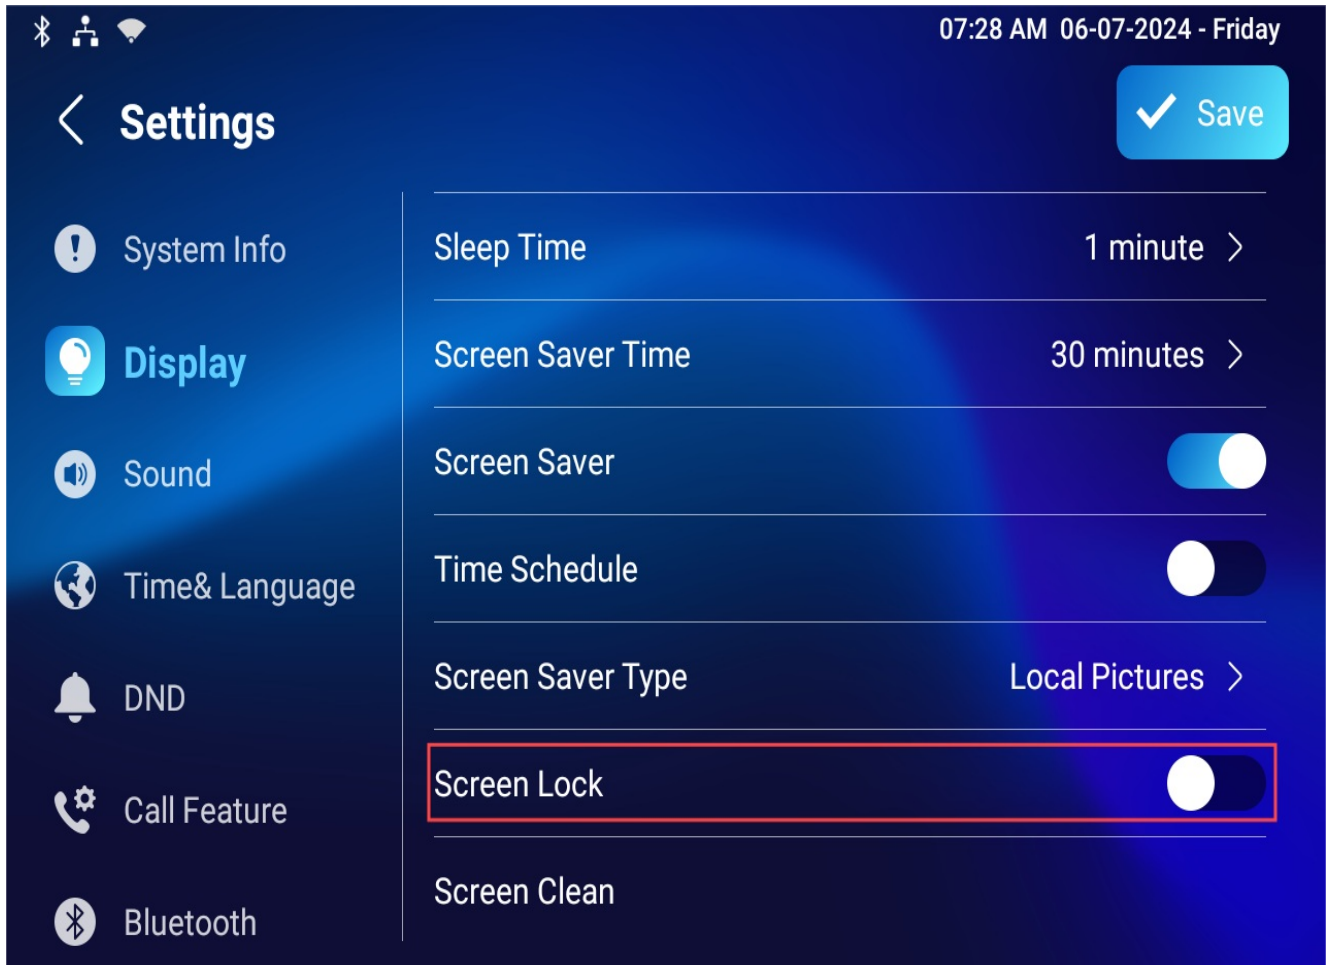

Local Relay ?

Zone	Zone Type	Local Relay 1	Local Relay 2
Zone1	Infrared	Disabled ▼	Disabled ▼
Zone2	Infrared	Disabled ▼	Disabled ▼
Zone3	Infrared	Disabled ▼	Disabled ▼
Zone4	Infrared	Disabled ▼	Disabled ▼
Zone5	Infrared	Disabled ▼	Disabled ▼
Zone6	Infrared	Disabled ▼	Disabled ▼
Zone7	Infrared	Disabled ▼	Disabled ▼
Zone8	Infrared	Disabled ▼	Disabled ▼

Screen Unlock Setting

To prevent unauthorized access to the device when it is not being used, enable the Screen Lock function. This feature automatically locks the device after a period of inactivity, requiring a password to unlock.

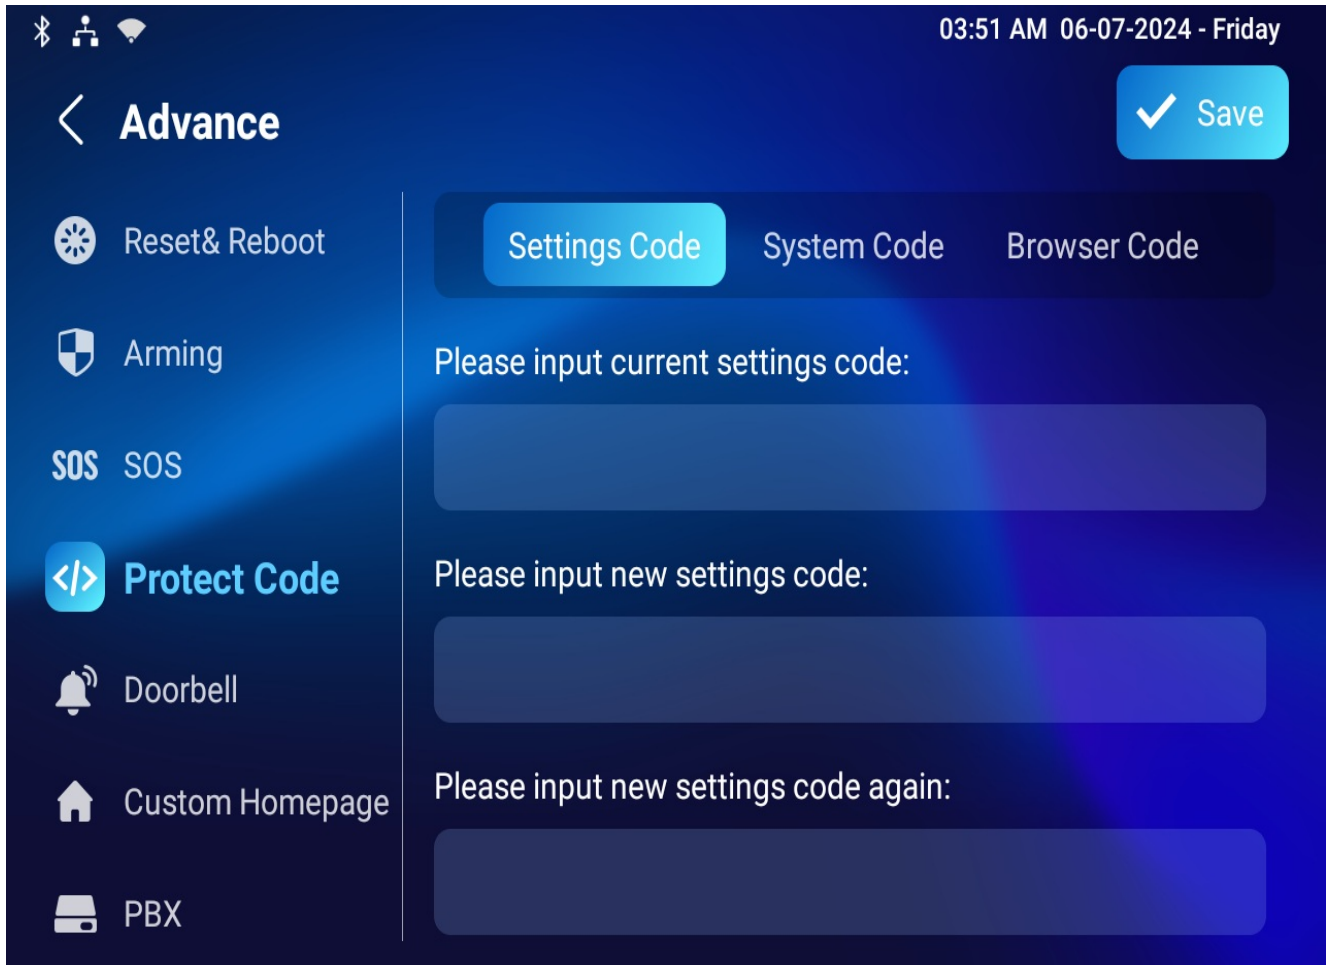

The screen unlock feature can be enabled directly on the device **Settings > Display** screen.

Screen Unlock by PIN code

To unlock the screen, users need to enter the preset PIN code.

Navigate to **Settings > Advance Settings > Protect Code** screen and select **Settings Code** to change the password.

Note

The default unlock PIN is 123456.

Voice Encryption

Secure Real-time Transport Protocol (SRTP) is a protocol derived from the Real-time Transport Protocol (RTP). It enhances the security of data transmission by providing encryption, message authentication, integrity assurance, and replay protection.

To set it up, go to the **Account > Advanced > Encryption** interface.

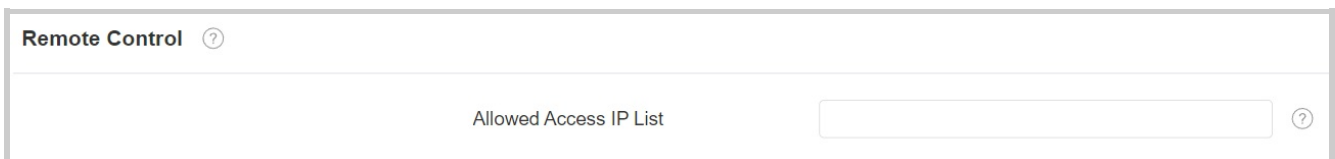

- **Voice Encryption:**
 - **Disabled:** The call will not be encrypted.

- **SRTP(Compulsory):** All audio signals(technically speaking it is RTP streams) will be encrypted to improve security.
- **SRTP(Optional):** Encrypt the voice from the caller. If the caller also enables SRTP, the voice signals will also be encrypted.
- **ZRTP(Optional):** The protocol that the two parties use to negotiate the SRTP session key.

Remote Control

The remote control function allows a specific server to send HTTP commands or requests to the indoor monitor for actions like unlocking a local relay.

To set it up, navigate to the web **Device > Relay > Remote Control** interface.

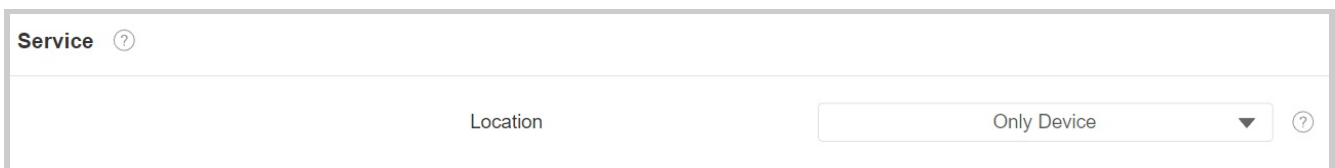

The screenshot shows a web interface titled "Remote Control" with a help icon. Below the title is a large text input field labeled "Allowed Access IP List" with a help icon to its right.

- **Allowed Access IP List:** Set up the server IP address that can be allowed to send the HTTP commands to the indoor monitor.

Location

With users' permission, Location service uses information from cellular, Wi-Fi, Global Positioning System (GPS), and Bluetooth to determine the device's location. Users can turn off this service or change its settings anytime.

To set it up, navigate to the web **Security > Advanced** interface.

The screenshot shows a web interface titled "Service" with a help icon. Below the title is a dropdown menu labeled "Location" with the option "Only Device" selected and a help icon to its right.

Web Interface Automatic Log-out

You can set up the web interface's automatic log-out timing, requiring re-login by entering the user name and the passwords for security purposes or for the convenience of operation.

To set it up, go to the web **Security > Basic > Session Time Out** interface.

Session Time Out ?

Session Time Out Value (60~14400s) ?

High Security Mode

High security mode is designed to enhance the security. It employs encryption across various facets, including the communication process, door opening commands, password storage methods, and more.

To set it up, go to the web **Security > Basic > High Security Mode** interface.

High Security Mode ?

Enabled ?

Important Notes

1. The High Security mode is off by default when you upgrade the device from a version without the mode to one with it. But if you reset the device to its factory settings, the mode is on by default.

2. This mode makes the old version tools incompatible. You need to upgrade them to the following versions or higher to use them.

·PC Manager: 1.2.0.0

·IP Scanner: 2.2.0.0

·Upgrade Tool: 4.1.0.0

·SDMC: 6.0.0.34

3. The supported HTTP format for relay triggering varies depending on whether high secure mode is enabled or disabled.

If the mode is on, the device only accepts the new HTTP formats below for door opening.

- | http://username:password@deviceIP/fcgi/OpenDoor?action=OpenDoor&DoorNum=1
- | http://deviceIP/fcgi/OpenDoor?action=OpenDoor&DoorNum=1

If the mode is off, the device can use both the new formats above and the old format below:

- | http://deviceIP/fcgi/do?

`action=OpenDoor&UserName=username&Password=password&DoorNum=1`

4. It is not allowed to import/export configuration files in tgz. format between a device with the high security mode and another one without it. For assistance with file transfer, please contact Akuvox technical support.

Lift Control

You can summon a lift at home via the lift control feature.

Configure Lift Control

Before setting the Lift icon, you need to display it on the Home or More screen.

To display the icon, go to the **Device > Display Setting** interface.

Area	Type	Value	Label	Type(max size:100*100)
Area1	Call			Not selected any files Select File Delete
Area2	Lift		Lift	Not selected any files Select File Delete
Area3	DND			
Area4	Monitor			Not selected any files Select File Delete

To set the Lift icon, go to the web **Device > Lift > Lift Control** interface.

Name	Status	Type	Label	Http Command
Lift1	Disabled	Up		http://
Lift2	Disabled	Up		http://

- **Status:** Enable or disable the lift button.
- **Type:** Decide the button icon.
- **Label:** Name the button.
- **HTTP Command:** Select http:// or https:// for the head of the HTTP command and enter the HTTP command.

Users can tap the icon to summon or send a lift.

Configure Lift Control Prompt

When the lift controller receives the HTTP command, it will give feedback on the current lift status with a prompt.

To set it up, go to the web **Device > Lift > Hints** interface. Click the **Edit** icon  to modify the desired prompt.

Hints ?

+ Add Import Export

<input type="checkbox"/>	Index	HTTP Status Code	Lift	Hints	Edit
<input type="checkbox"/>	1	200	Lift1	Lift is coming to your floor	
<input type="checkbox"/>	2	200	Lift2	Lift has been sent to Ground Floor	

Delete Delete All Prev 1/1 Next 1 Go

If there are huge amounts of prompts that need to be added, you can click the **Export** tab to export a template and import the file after editing. The import and export files should be in XML format.

Hints ?

+ Add Import Export

Auto-provisioning via Configuration File

Provisioning Principle

Auto-provisioning is a feature used to configure or upgrade devices in batch via third-party servers. DHCP, PNP, TFTP, FTP, and HTTPS are the protocols used by the Akuvox devices to access the URL of the address of the third-party server which stores configuration files and firmware, which will then be used to update the firmware and the corresponding parameters on the device.

Please see the flow chart below:

Introduction to the Configuration Files for Auto-Provisioning

Configuration files have two formats for auto-provisioning. One is the general configuration files used for the general provisioning and another one is the MAC-based configuration provisioning.

The difference between the two types of configuration files:

- **General configuration provisioning:** a general file is stored in a server from which all the related devices will be able to download the same configuration file to update parameters on the devices. For example, cfg.
- **MAC-based configuration provisioning:** MAC-based configuration files are used for auto-provisioning on a specific device as distinguished by its unique MAC number. The configuration files named with the device MAC number will be matched automatically with the device MAC number before being downloaded for provisioning on the specific device.

Note

- The configuration file should be in CFG format.
- The general configuration file for the in-batch provisioning varies by model.
- The MAC-based configuration file for the specific device provisioning is named by its MAC address.
- If a server has these two types of configuration files, devices will first access the general configuration files before accessing the MAC-based configuration files.

You may click [here](#) to see the detailed format and steps.

Autop Schedule

Akuvox provides you with different Autop methods that enable the device to perform provisioning for itself according to the schedule.

To set up the schedule, go to the web **Upgrade > Advanced > Automatic Autop** interface.

Automatic Autop ?

Mode	<input type="text" value="Power On"/>	?
Schedule	<input type="text" value="Sunday"/>	?
	<input type="text" value="22"/>	Hour(0~23)
	<input type="text" value="0"/>	Min(0~59)
Export Autop Template	<input type="button" value="Export"/>	?
Clear MD5	<input type="button" value="Clear"/>	?

- **Mode:**

- **Power On:** The device will perform Autop every time it boots up.
- **Repeatedly:** The device will perform Autop according to the schedule you set up.
- **Power On + Repeatedly:** Combine **Power On** mode and **Repeatedly** mode that will enable the device to perform Autop every time it boots up or according to the schedule.
- **Hourly Repeat:** The device will perform Autop every hour.

DHCP Provisioning Configuration

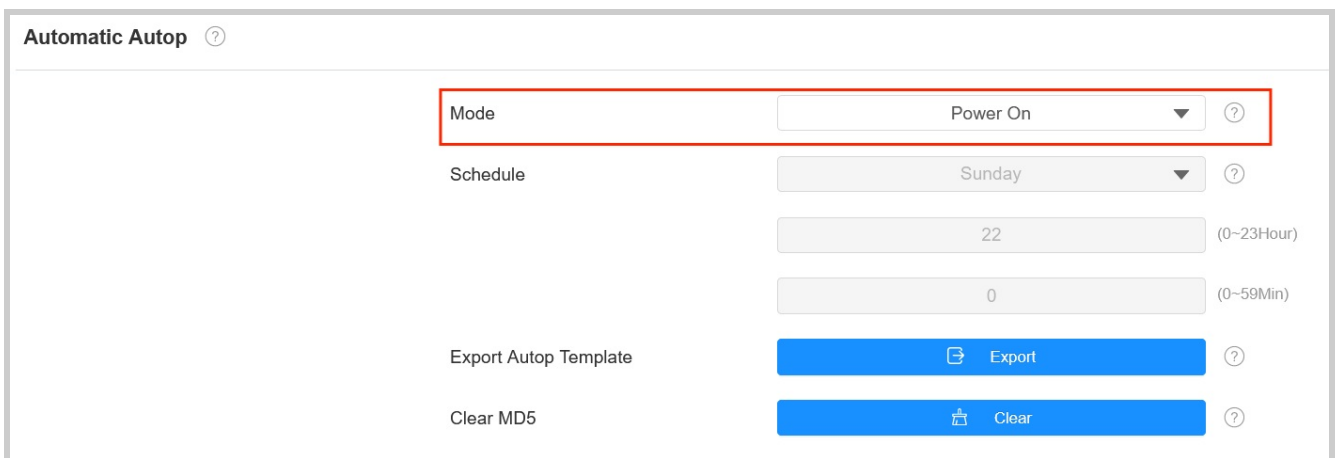

Auto-provisioning URL can also be obtained using the DHCP option which allows the device to send a request to a DHCP server for a specific DHCP option code. If you want to use **Custom Option** as defined by users with option codes ranging from 128-255), you are required to configure DHCP Custom Option on the web interface.

Note

- The Custom Option type must be a string. The value is the URL of TFTP server.

To set up DHCP Autop with **Power On** mode, go to the web **Upgrade > Advanced > Automatic Autop** interface.

To set up the DHCP Option, scroll to the DHCP Option section.

DHCP Option ?

Custom Option (128-254) ?

DHCP Option Enabled Custom Option Option 43 Option 66 ?

- **Custom Option:** Enter the DHCP code that matches with corresponding URL so that the device will find the configuration file server for the configuration or upgrading.
- **DHCP Option 43:** If the device does not get a URL from DHCP Option 66, it will automatically use DHCP Option 43. This is done within the software and the user does not need to specify this. To make it work, you need to configure the DHCP server for option 43 with the upgrade server URL in it.
- **DHCP Option 66:** If none of the above is set, the device will automatically use DHCP Option 66 to get the upgrade server URL. This is done within the software and the user does not need to specify this. To make it work, you need to configure the DHCP server for option 66 with the upgrade server URL in it.

Static Provisioning Configuration

You can manually set up a specific server URL for downloading the firmware or configuration file. If an auto-provision schedule is set up, the device will perform the auto-provisioning at a specific time according to the auto provision schedule you set up. In addition, TFTP, FTP, HTTP, and HTTPS are the protocols that can be used for upgrading the device firmware and configuration.

To download the template, go to the **Upgrade > Advanced > Automatic Autop** interface.

Automatic Autop ?

To set up the server, go to the **Upgrade > Advanced > Manual Autop** interface.

Manual Autop ?

URL	<input type="text"/>	?
Username	<input type="text"/>	?
Password	<input type="password"/>	?
Common AES Key	<input type="password"/>	?
AES Key(MAC)	<input type="password"/>	?

 AutoP Immediately

- **URL:** Specify the TFTP, HTTP, HTTPS, or FTP server address for the provisioning.
- **Username:** Enter the username if the server needs a username to be accessed.
- **Password:** Enter the password if the server needs a password to be accessed.
- **Common AES Key:** It is used for the intercom to decipher general Autop configuration files.
- **AES Key (MAC):** It is used for the intercom to decipher the MAC-based Autop configuration file.

Note

- AES as one type of encryption should be configured only when the config file is encrypted with AES.
- **Server Address Format:**
 - TFTP: `tftp://192.168.0.19/`
 - FTP: `ftp://192.168.0.19/`(allows anonymous login)
`ftp://username:password@192.168.0.19/`(requires a user name and password)
 - HTTP: `http://192.168.0.19/`(use the default port 80)
`http://192.168.0.19:8080/`(use other ports, such as 8080)
 - HTTPS: `https://192.168.0.19/`(use the default port 443)

Tip

Akuvox does not provide user specified server. Please prepare TFTP/FTP/HTTP/HTTPS server by yourself.

PNP Configuration

Plug and Play (PNP) is a combination of hardware and software support that enables a computer system to recognize and adapt to hardware configuration changes with little or no intervention by a user.

To enable the function, go to the **Upgrade > Advanced > PNP Option** interface.

PNP Option ?
PNP Config Enabled <input checked="" type="checkbox"/> ?

Firmware Upgrade

Akuvox devices can be upgraded on the device web interface.

To upgrade the device, navigate to the **Upgrade > Basic** interface.

Basic ?

Firmware Version	88.30.12.404	?
Hardware Version	1.0	?
Upgrade	<input type="button" value="Import"/>	?
Factory Default	<input type="button" value="Reset"/>	?
Except the start-up settings	<input type="checkbox"/>	?
Reset Config	<input type="button" value="Reset"/>	?
Reboot	<input type="button" value="Reboot"/>	?

Note

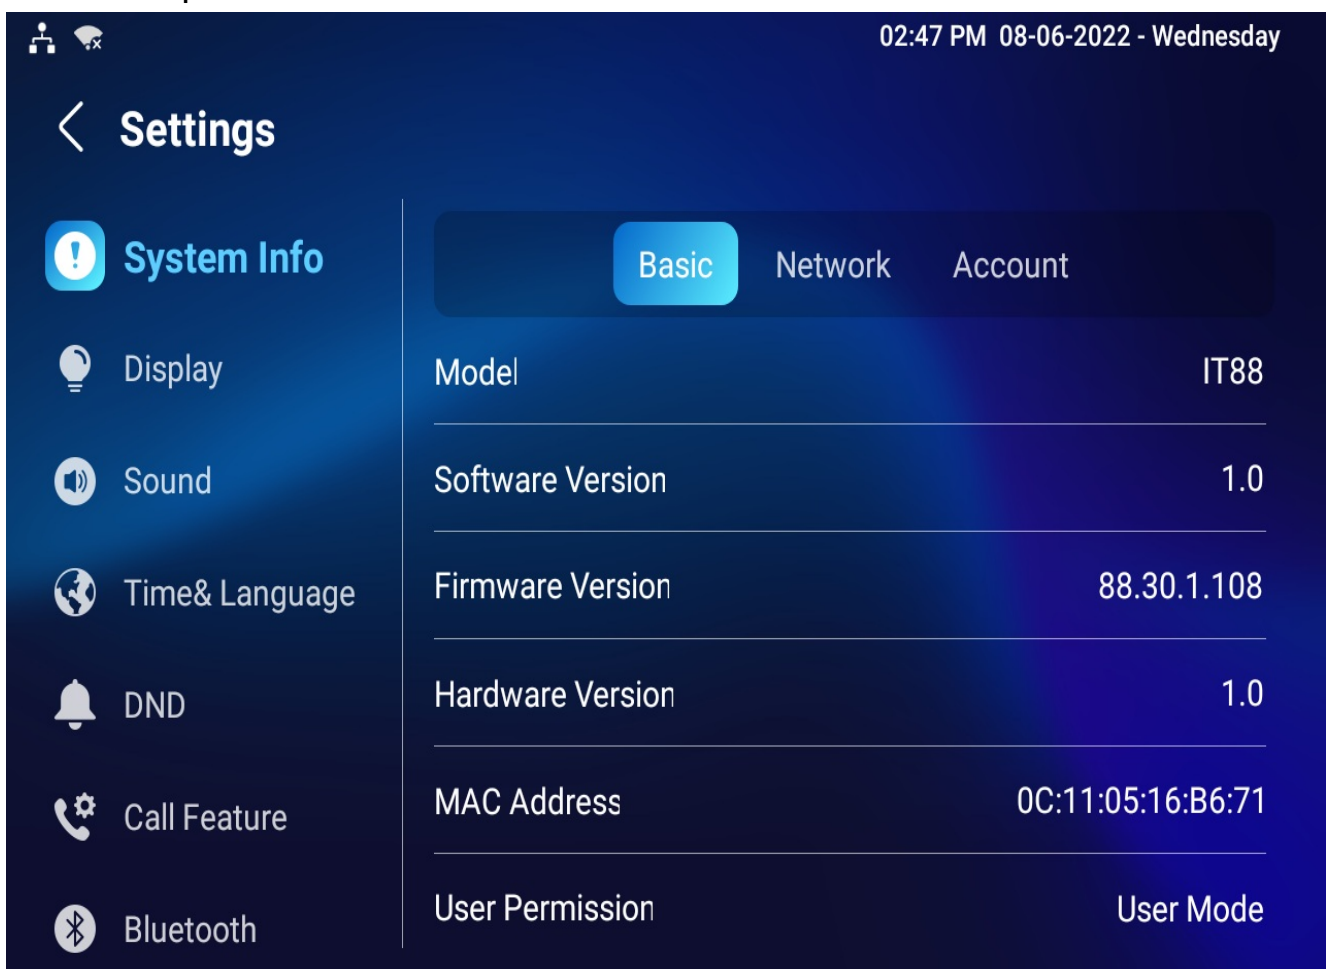

Firmware files should be in .zip format for the upgrade.

Device Integration with Third Party

Enter Applications Screen

The content of this part mainly teaches you how to enter the APK interface through hidden operations.

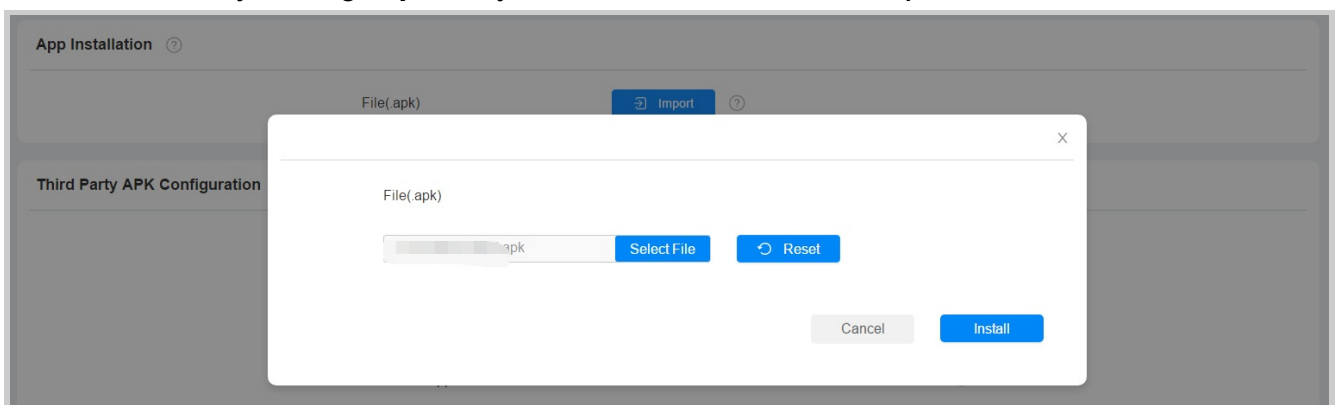

Go to the **Settings > System Info** interface. Tap on **User Mode** 10 times. Then select **Admin Mode** and tap Confirm.

Install Third-party App

To install the third-party app, go to the web **Device > Third Party APK** interface. Upload the APK file from the PC by clicking **Import**. If you want to clear the APK file uploaded, click **Reset**.

To configure the installed third-party app, you can click the **App Name** to select the specific app for configuration. Then tick the check boxes of each field for the specific configuration.

Third Party APK Configuration ?

App Name	<input type="text"/>	?
Intervals Without Operating (s)	<input type="text" value="10"/>	?
Start Up Enabled	<input type="checkbox"/>	?
Turn Back App	<input type="checkbox"/>	?
Turn Back App After Awakening	<input type="checkbox"/>	?
APP Keep-Alive	<input type="checkbox"/>	?

General ?

Turn Back App After Calling	<input checked="" type="checkbox"/>	?
Show App Icon	<input checked="" type="checkbox"/>	?

- **App Name:** Select the app to be configured.
- **Intervals Without Operating(S):** Set the time to return to the app when there is no operation on the device.
- **Start Up Enabled:** Allow the app to run automatically when the device is turned on.
- **Turn Back App:** Allow automatic returning to the app.
- **Turn Back App After Awakening:** Allow the device to return to the app when the screen is awakened.
- **APP Keep-Alive:** Allow the app to stay running without being turned off.
- **Turn Back App After Calling:** Allow the device to return to the app automatically after finishing a call.
- **Show App Icon:** Allow the app icon to be displayed on the screen.

Integration via HTTP API

HTTP API is designed to achieve a network-based integration between the third-party device and the Akuvox device.

To set it up, go to the **Security > API** interface.

API Setting ?

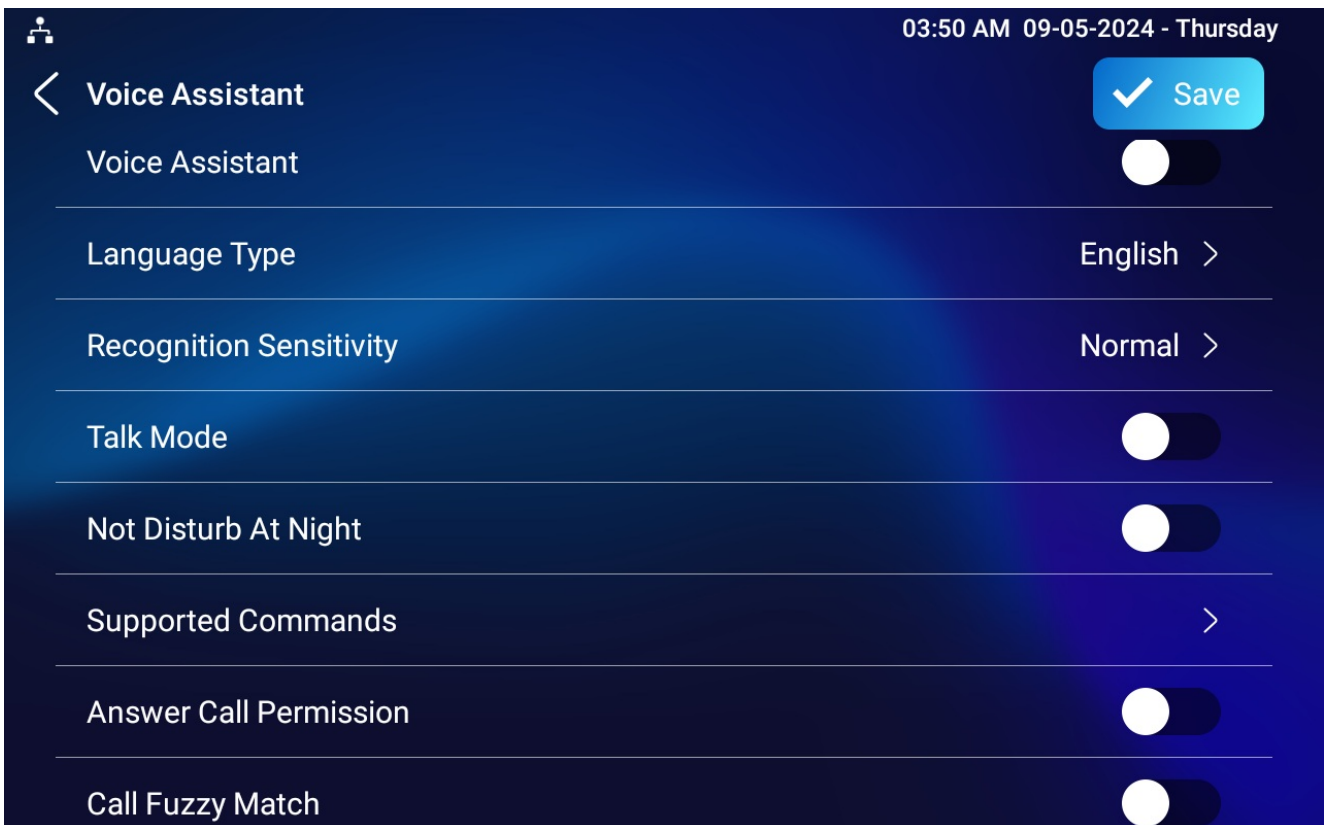

API	Enabled ▼
Auth Mode	Allowlist ▼
Username	admin
Password

- **HTTP API:** When the function is disabled, any request to initiate the integration will be denied and be returned HTTP 403 forbidden status.
- **Auth Mode:**
 - **Allowlist:** You are required to fill in the IP address of the third-party device for authentication. It is suitable for operation in LAN.
 - **Digest:** The password encryption method only supports MD5. MD5(Message-Digest Algorithm) In the Authorization field of the HTTP request header: WWW-Authenticate: Digest realm="HTTP API",qop="auth,auth-int",nonce="xx",opaque="xx".
 - **None:** No authentication is required for HTTP API as it is only used for demo testing.
- **Username:** Set the user name when **Digest** authorization mode is selected. The default user name is **admin**.
- **Password:** Set the password when **Digest** authorization mode is selected. The default password is **admin**.

Voice Assistant

Albert is a voice assistant from Akuvox. It can help you with intercom calls, door opening, arming modes, and other functions. As for the door access control, you can choose which relay to activate by this voice assistant.

To set it up, go to the device **Settings > Voice Assistant** screen.

- **Language Type:** Select the language. Currently, only English and Chinese are supported.
- **Recognition Sensitivity:** Adjust the voice assistance recognition sensitivity among Low, Normal, and High.
- **Talk Mode:** When Talk Mode is enabled, the voice assistant will stay on to receive the voice commands for 30 seconds without calling **Albert** again to wake up the voice assistant. When disabled, the voice assistant will wake up for each voice command.
- **Not Disturb At Night:** This function is applied when users want the voice assistant to stay silent while carrying out what it is made to do according to the voice commands.
- **Supported Commands:** Tap to check the supported commands. Enable or disable the command(s).

- **Answer Call Permission:** Enable it to answer or reject the incoming call via voice assistant by replying "Yes" or "No".
- **Call Fuzzy Match:** Enable it to allow fuzzy matching of the contact name, for example, if users have Tom and Tomy in their contacts, then Tomy will also appear when they call Tom, and they are required to select the right contact manually.

Please see the voice command details below:

NO	Voice Command	Description	Voice Prompt
1	Intruder mode off	Use it when you want to clear the arming mode when the arming alarm is triggered. (you are required to enter the disarm password in the pop-out window initiated by the voice assistant)	Please Input Password
2	Clear arming	ibid	ibid
3	night mode	Use it when you want to change the arming mode to night mode	<ul style="list-style-type: none"> • Started it, sweet dreams! • Made it, good night • Sure, sleep mode is on • OK, start sleep mode, have a good night <p>Alright, sleep mode is opened, have a nice dream</p>
4	sleep mode	Use it when you want to change the arming mode to sleep mode	<ul style="list-style-type: none"> • Sure, sleep mode is on • OK, start sleep mode, have a good night • Alright, sleep mode is opened, have a nice dream • Made it, good night • Started it, sweet dreams!
5	away mode	Use it when you want to change the arming mode to away mode	<ul style="list-style-type: none"> • Sure, away mode is on • OK, start away mode • Alright, away mode is opened • Made it • Made it, have a good day • Done, away mode is started

8	open the door	Use it when you want to open the door	<ul style="list-style-type: none"> • Sure, the door is open • The door is open for you • No problem, open the door • Opened, always here for you <p>Yep, door is opened now</p>

9	disable DND	Use it when you want to disable the DND mode	<ul style="list-style-type: none"> • Yes, closed it for you • Welcome back, DND is off • DND is closed, to mingle with the world • Sure, DND is off
10	enable DND	Use it when you want to enable the DND mode	<ul style="list-style-type: none"> • OK, DND is on • Done, enjoy yourself • DND is on, feel your inner peace • Turn on it now
11	emergency	Use it when you want to dial SOS number	<ul style="list-style-type: none"> • Got it, calling SOS as soon as possible • OKay, be relaxed, making a emergency call now • Calling ambulance now • Calling SOS now, please hold on • God bless you, calling emergency now • Hold on please, calling emergency right now • Take it easy, calling emergency right now
12	help me	ibid	ibid
13	call manager	use it when you want to call "manager" you name set up in the phonebook	<ul style="list-style-type: none"> • Please choose one for calling • Sorry I didn't get that
14	call staff	use it when you want to call "stuff" you named and set up in the phonebook	<ul style="list-style-type: none"> • Please choose one for calling • Sorry I didn't get that
15	call carer	use it when you want to call "carer" you named and set up in the phonebook	<ul style="list-style-type: none"> • Please choose one for calling • Sorry I didn't get that
16	open message	use it when you want to check text message.	<ul style="list-style-type: none"> • Got it, please check • OK, message is opened, you can write some contents to send • Message is ready for you • already opened it for you
17	open monitor	use it when you want to check monitor	Got it , please check
18	homepage	use it when you want to go to home screen	<ul style="list-style-type: none"> • Home page is already for you. <p>Already got it for you</p>
19	enable mute	use it when you want to mute your voice on the indoor monitor so that the caller or callee will be not be able to hear you.	<ul style="list-style-type: none"> • OK, mute is on • Done, enjoy yourself • Mute is on, feel your inner peace • Set it now
20	disable mute	use it when you want to unmute your voice on the indoor monitor so that the caller or callee will be able to hear you.	<ul style="list-style-type: none"> • Sure, mute is off • Mute is closed, to mingle with the world • Welcome back, mute is off • Yes, closed it for you
21	shut down/cancel	Use it when you want to turn off the voice assistant function.	<ul style="list-style-type: none"> • See you • See you later • Bye • Good bye • See you next time • Bye, best regards • See you, have a great time

To enable the voice assistant and set the voice assistant-controlled relay, go to the web **Settings > Voice Assistant** interface.

Voice Assistant Setting ?

Voice Assistant Enabled ?

Voice Command Setting ?

Unlock Type Relays can be configured in the Phone-Relay menu ?

- **Unlock Type:** Select the relay type triggered by the voice command.

Backup

You can import or export encrypted configuration files to your Local PC.

To export the file, navigate to the **Upgrade > Advanced > Others** interface. The export file is in the TGZ file.

The import file should be in TGZ, CONF, or CFG format.

Debug

System Log for Debugging

System logs can be used for debugging purposes.

If you want to export the system log to a local PC or a remote server for debugging, you can set up the function on the web **Upgrade > Diagnosis > System Log** interface.

- **Log Level:** Log level ranges from 0 to 7 levels. You will be instructed by Akuvox technical staff about the specific log level to be entered for debugging purposes. The default log level is 3. The higher the level is, the more complete the log is.
- **Export Log:** Click the **Export** tab to export a temporary debug log file to a local PC.
- **Remote System Server:** Enter the remote server address to receive the system log and it will be provided by Akuvox technical support.

PCAP for Debugging

PCAP is used to capture the data package going in and out of the devices for debugging and troubleshooting purposes.

To set up PCAP, go to the web **Upgrade > Diagnosis > PCAP** interface.

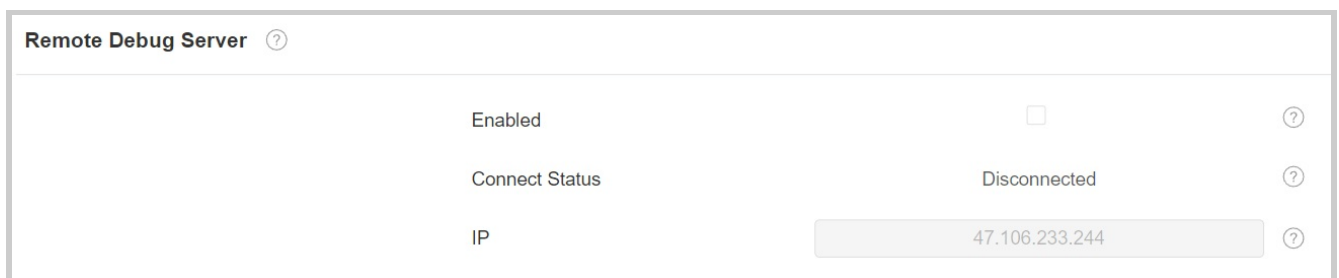

- **PCAP Specific Port:** Select the specific port from 1-65535 so that only the data packet from the specific port can be captured. You can leave the field blank by default.

- **PCAP**: Click the **Start** tab and **Stop** tab to capture a certain range of data packets before clicking the **Export** tab to export the data packets to your Local PC.
- **PCAP Auto Refresh**: When enabled, the PCAP will continue to capture data packets even after the data packets reach 50M maximum in capacity. When disabled, the PCAP will stop data packet capturing when the data packets reach the maximum capturing capacity of 1MB.

Remote Debug Server

When the device is having a problem, you can use the remote debug server to access the device log remotely for debugging purposes.

To set it up, go to the **Upgrade > Diagnosis > Remote Debug Server** interface.

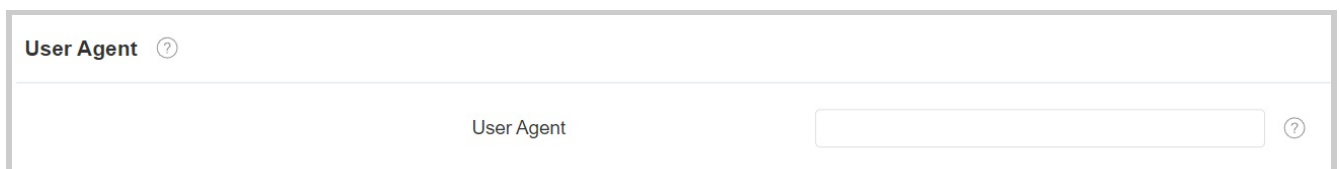

The screenshot shows the 'Remote Debug Server' configuration page. It has a title 'Remote Debug Server' with a help icon. Below the title, there are three rows of configuration options, each with a help icon on the right:

Enabled	<input type="checkbox"/>	?
Connect Status	Disconnected	?
IP	<input type="text" value="47.106.233.244"/>	?

User Agent

User agent is used for identification purpose when you are analyzing the SIP data packet.

To set it up, go to the web **Account > Advanced > User Agent** interface.

The screenshot shows the 'User Agent' configuration page. It has a title 'User Agent' with a help icon. Below the title, there is one row of configuration options with a help icon on the right:

User Agent	<input type="text"/>	?
------------	----------------------	---

Screenshots

You can take a screenshot of the specific device screen to help with the troubleshooting and so on if needed.

To take screenshots, go to **Upgrade > Diagnosis > Screenshots** interface. Click **Screenshots** to capture the current screen.

PBX Feature

The indoor monitor has a built-in PBX server which allows the device to serve as an intercom monitor and a SIP PBX, so users do not bother to prepare an extra SIP PBX again. The PBX supports call forward, transfer, conference, ring group features, and so on. You can set it up on the device screen or web interface.

PBX Configuration on The Device

To set it up, go to **Settings > Advance > PBX** screen.

Enable PBX Service

On the PBX screen, tap the **Setting** icon  in the upper right corner to enable the PBX. After turning on the PBX server, you can check the server address and port in the upper left corner.

- **Media Mode:**

- **Default:** Select it when the intercom devices are deployed in the same LAN network.
- **Bypass:** Select it when the devices are deployed in different LAN networks where PBX serves as a bridge or a media for the network data transmission.

Manage PBX Accounts

You can check the basic PBX information like PBX account status by tapping  in the upper right corner. Then, select the desired row by tapping .

< PBX

Group

Number List (Server Addr: 192.168.36.102:5070)

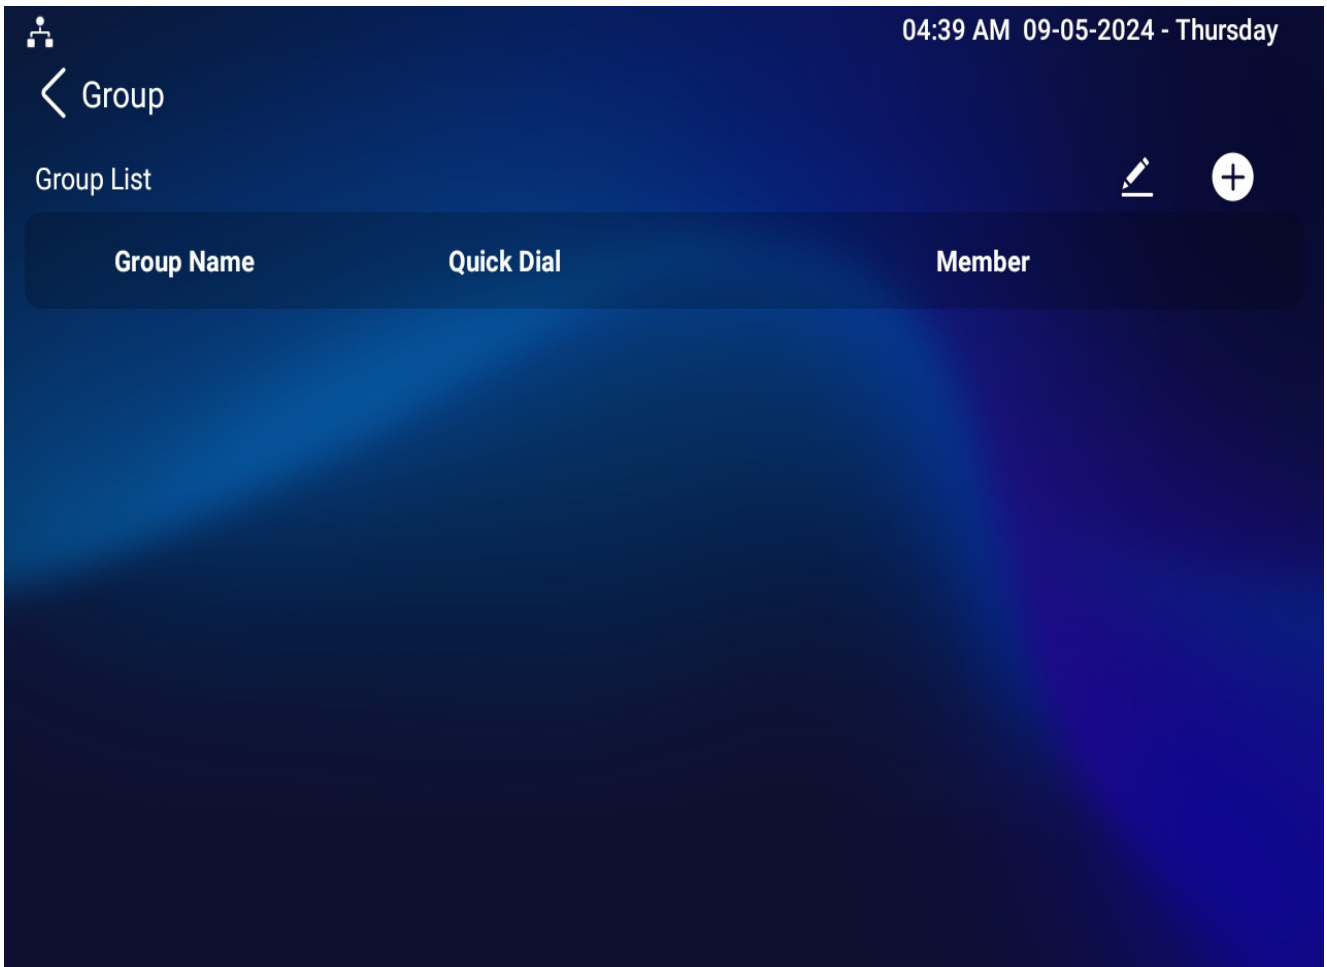

Status	Username	Display Name	Call In/Call Out	Calling Party	Called Party
● Unregistered	1000	Extension 1000			
● Unregistered	1001	Extension 1001			
● Unregistered	1002	Extension 1002			
● Unregistered	1003	Extension 1003			
● Unregistered	1004	Extension 1004			
● Unregistered	1005	Extension 1005			
● Unregistered	1006	Extension 1006			

- **Status:** Indicate whether the account is registered or not.
- **Username:** Enter the extension number registered onto the SIP server.
- **Password:** Enter the password of the corresponding users.
- **Display Name:** Enter the display name of this account, which will be shown on other devices when making calls.
- **Enabled Status:** Activate or deactivate the SIP account.
- **Call In/Call Out:** The calling status of this account.
- **Calling Party:** The caller number.
- **Called Party:** The callee number.

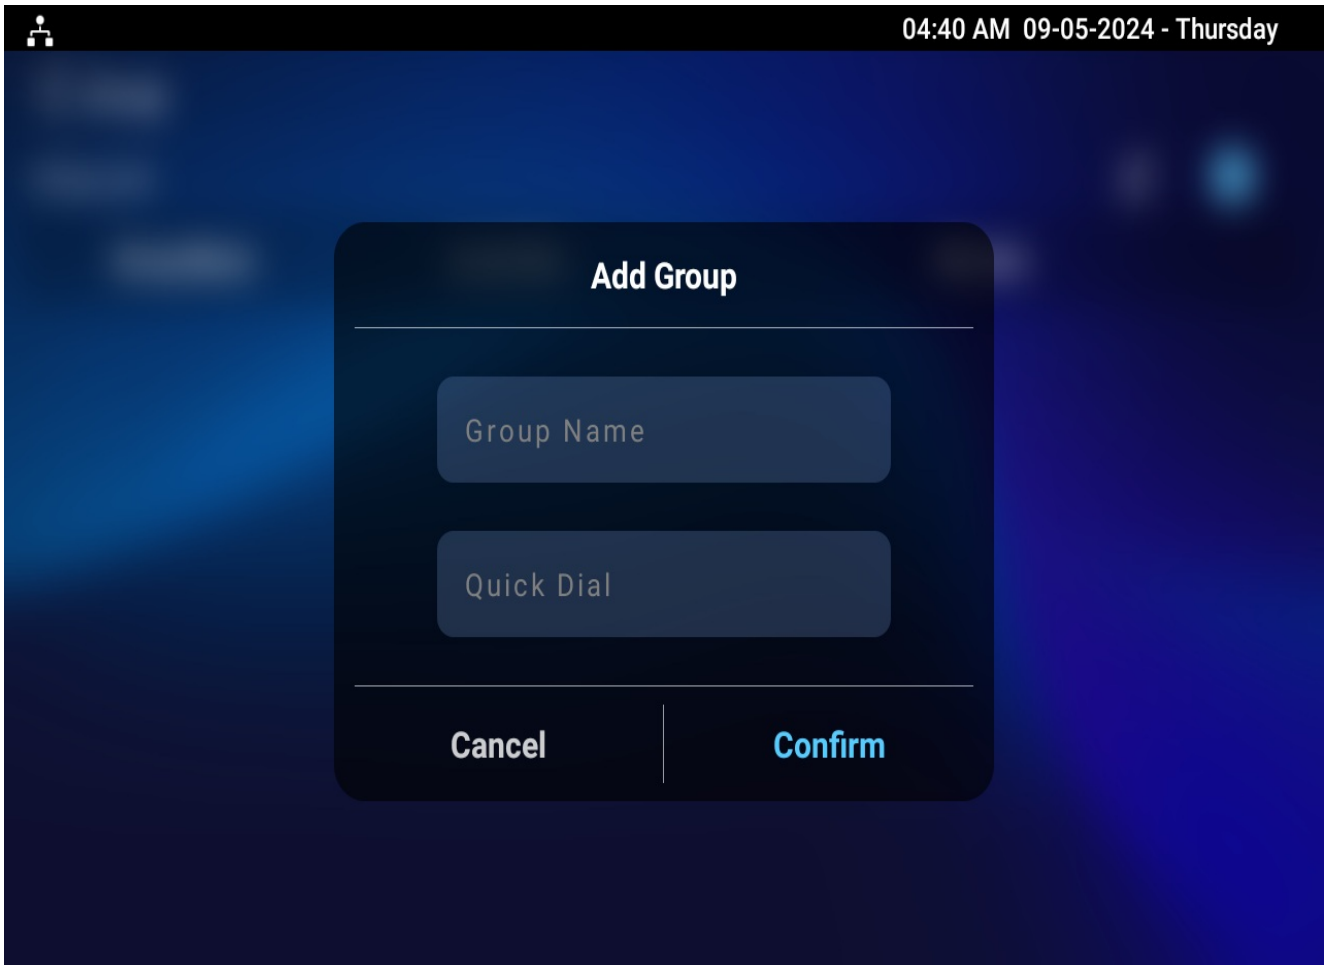

Manage PBX Groups

One number can be added to different ring groups. Once receiving an incoming call, the numbers in one group will ring up at the same time.

Tap **Group** in the upper right corner on the PBX screen to add a new ring group or edit the existing group.

Tap the Add icon in the upper right corner to add a group.

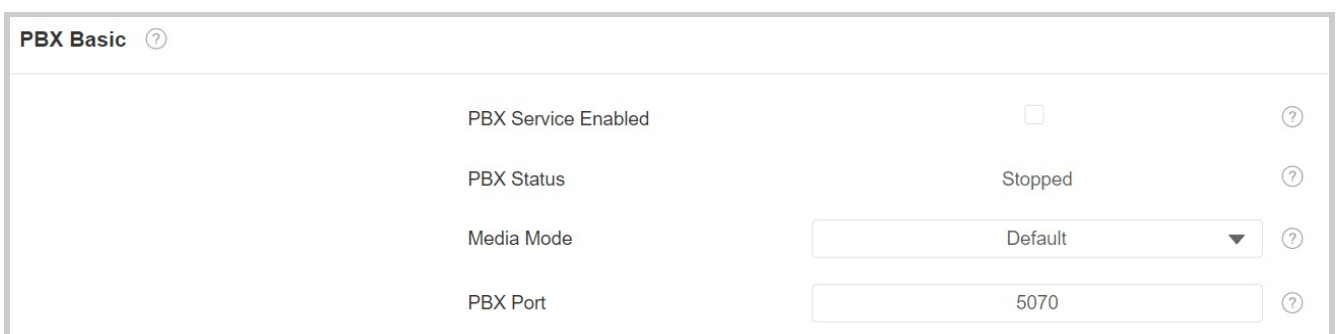

- **Group Name:** Name the group.
- **Quick Dial:** Enter the number used to call members of the group.
- **Member:** Select the registered number from the number list by pressing the area below Member.

PBX Configuration on the Web Interface

Enable PBX Service

To set up the PBX feature on the web, go to the **PBX > Basic** interface.

- **PBX Status:** Indicate whether the PBX is on or off.
- **Media Mode:**
 - **Default:** Select it when the intercom devices are deployed in the same LAN network.
 - **Bypass:** Select it when the devices are deployed in different LAN networks where PBX serves as a bridge or a media for the network data transmission.
- **PBX Port:** Display the port of the server.

Manage PBX Accounts

You can add or edit accounts on the **PBX > Basic** interface.

<input type="checkbox"/>	Index	Username	Password	Display Name	Status	Edit
<input type="checkbox"/>	1	1000	abc1000	Extension 1000	UnRegistered

- **Status:** Indicate whether the account is registered or not.

Manage PBX Groups

To set up PBX groups, go to the **PBX > Ring Group** interface. Click **+Add** or to create or modify a group.

The screenshot displays the 'Group Setting' interface. At the top, there is a '+ Add' button. Below it is a table with the following columns: Index, Group Name, Quick Dial, Member, and Edit. The table is currently empty, showing a 'No Data' message. At the bottom of the table, there are buttons for 'Delete', 'Delete All', 'Prev', '1/1', 'Next', a page number '1', and a 'Go' button. A modal window titled 'Add Group' is open, featuring three input fields: 'Group Name', 'Quick Dial', and 'Member'. Each input field has a help icon (a question mark in a circle) to its right. At the bottom of the modal, there are 'Cancel' and 'Submit' buttons.

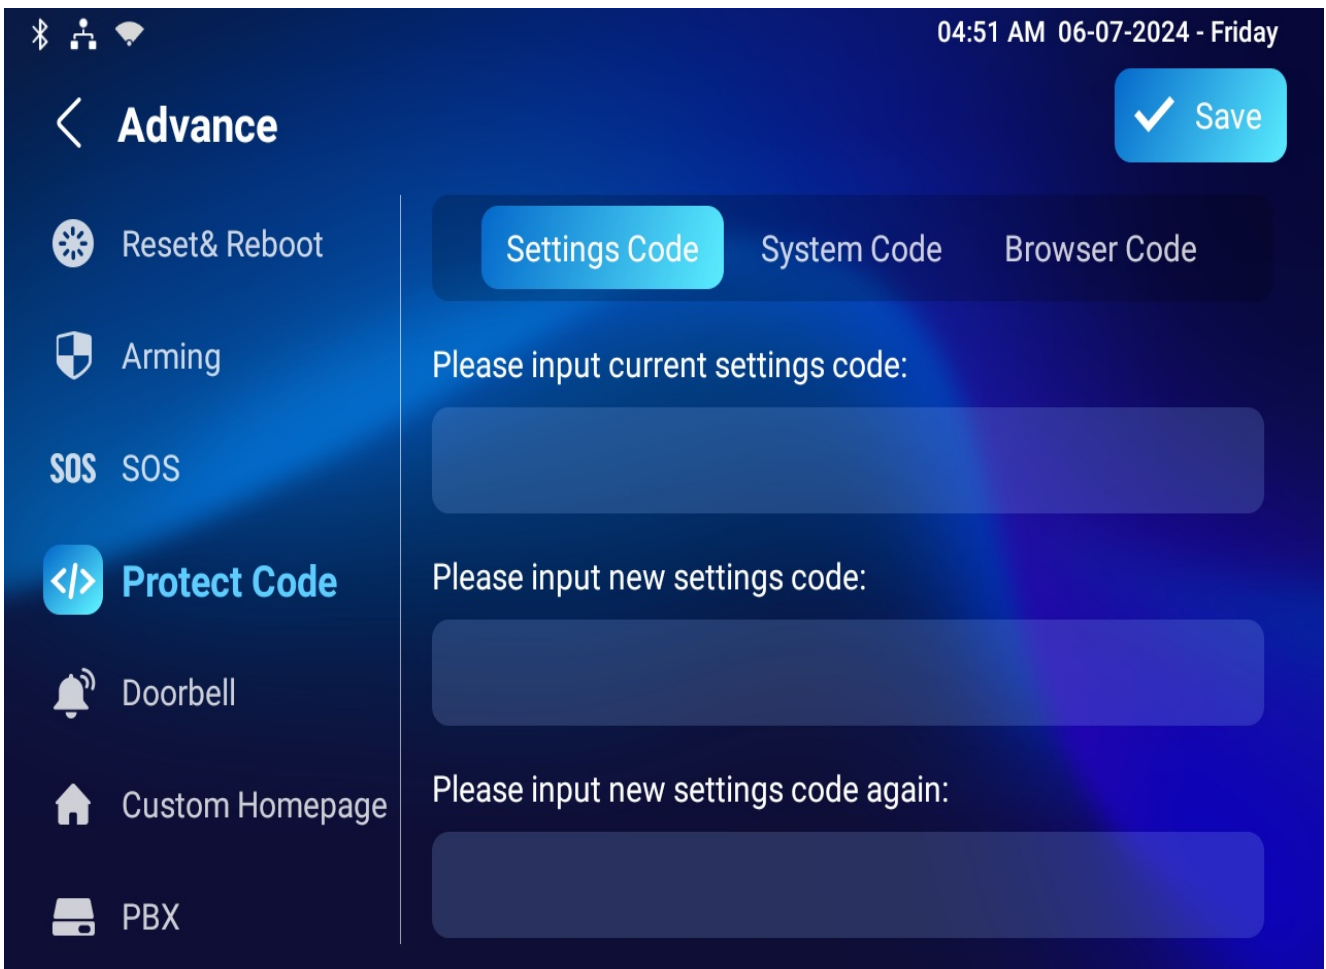

- **Group Name:** Name the group.
- **Quick Dial:** Enter the number used to call members of the group.
- **Member:** Select the registered number from the number list.

Password Modification

Modify Device Basic Settings Password

Settings Code is used to unlock the screen. The default is 123456.

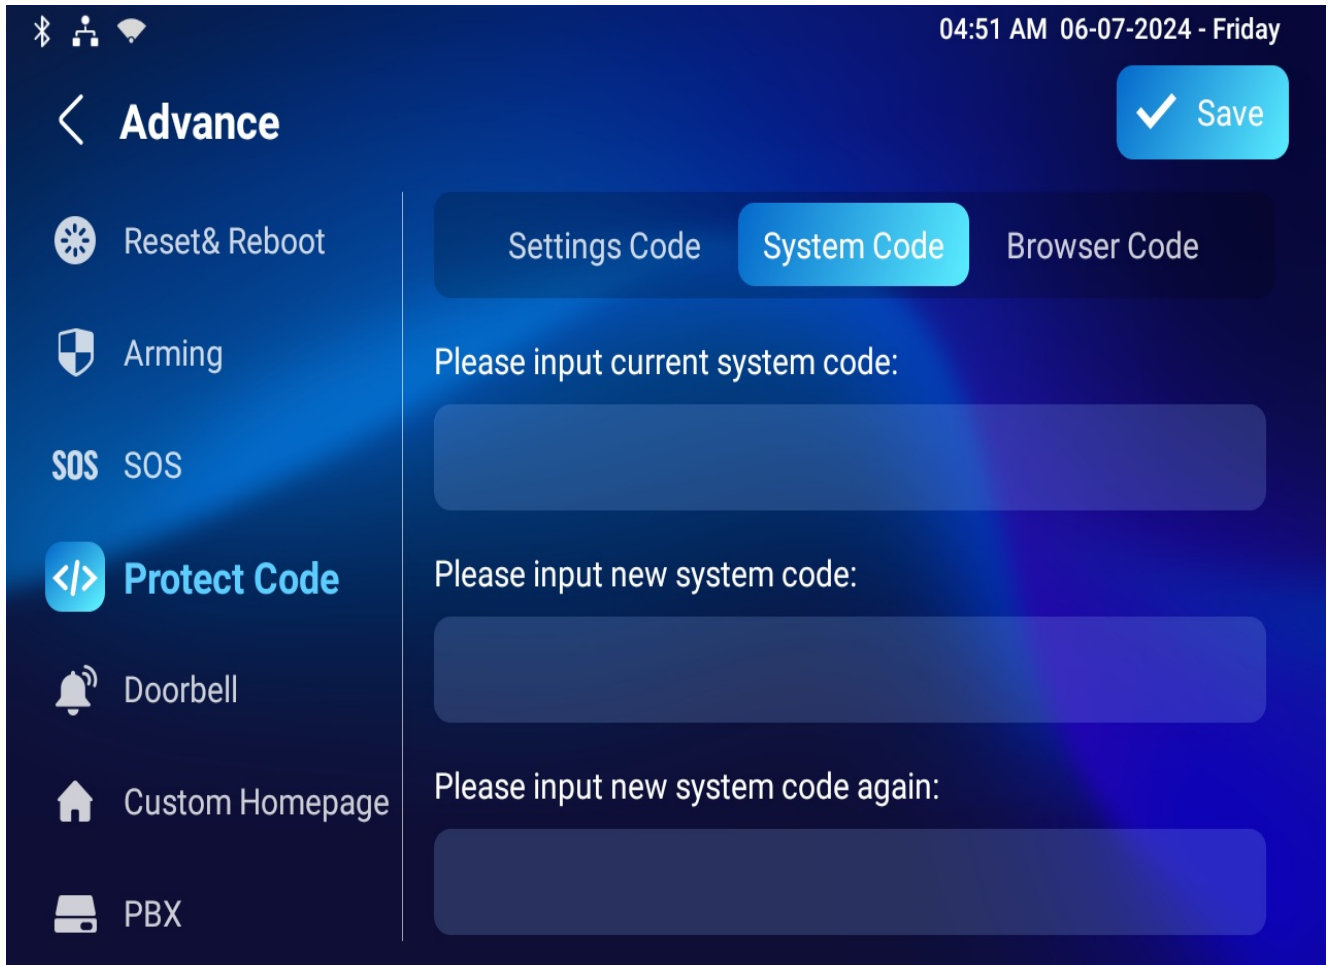

To modify it, go to the **Settings > Advance > Protect Code** screen and select **Settings Code**.

Modify Device Advance Settings Password

This password is used to enter the advance settings of the device, including password settings, account numbers, SOS numbers, network settings, etc. The default password is 123456.

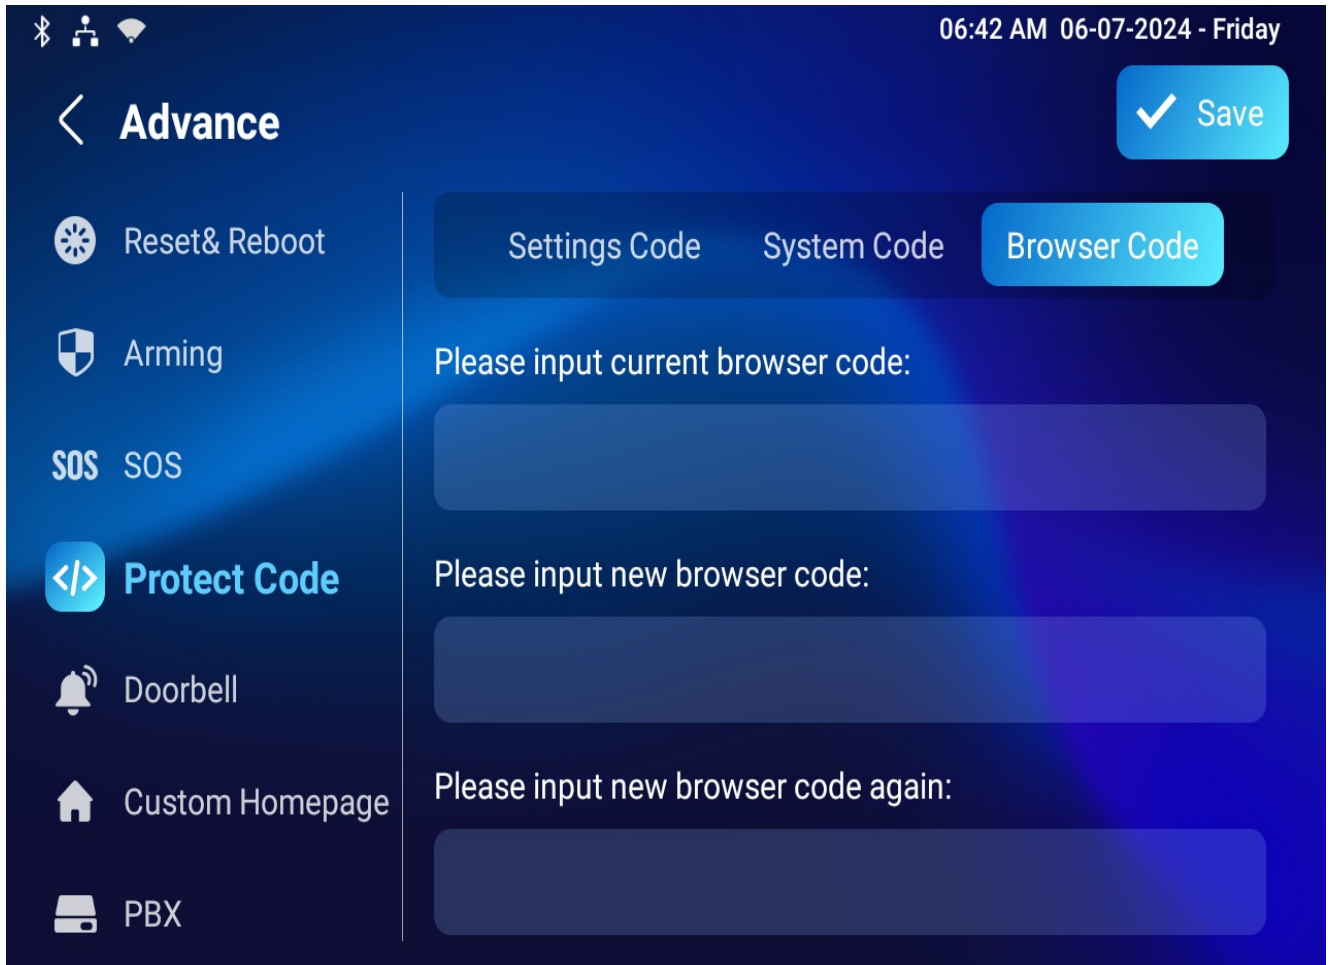

To modify it, navigate to the **Settings > Advance > Protect Code** screen and select **System Code**.

Modify Browser Password

This password is used to lock the browser on the device in case someone abuses the browser for any unwanted application. You can do this configuration on the device screen. The default password is 123456.

To modify it, go to the **Settings > Advance > Protect Code** screen and select **Browser Code**. The default is 123456.

Modify Device Web Interface Password

To modify web interface password, you can do it on device web interface. Select **Admin** for the administrator account and **User** for the User Account. Click the **Change Password** tab to change the password.

To set it up, navigate to the **Security > Basic > Web Password Modify** interface.

Web Password Modify ?

Change Password X

The password must be at least eight characters long and contains at least one uppercase letter, one lowercase letter, and one digit.
